## EXPLANATION OF REVISIONS

Series published in this issue have been revised from January 1970 to date to conform with the 1970 Standard Industrial Classification, adjusted to 1971 Census of Manufactures benchmark data and incorporate other changes that reflect current interpretation and needs.

### Summary Aggregations

The 1970 S.I.C. insofar as the totals for all manufacturing industries are concerned, includes all establishments previously included in the 1960 S.I.C. with two relatively minor exceptions: custom tailoring shops are now considered part of retail trade and establishments primarily engaged in operating barking mills are a part of the logging industry. Because these two industries accounted for no more than a small fraction of total manufacturing values, re-classification of these industries to other than manufacturing has had no appreciable effect on series of summary aggregations in Tables 1, 2 and 3: all-industry totals of shipments by province, all-Canada totals and totals by durable and non-durable goods producing industries. Differences in values in these series from those previously published are a result of re-benchmarking and some changes in data interpretation and are not a result of re-classification.

### Major Industry Group Totals

Table 3, showing shipments, orders and inventories by Major Industry Group, contains some adjustments as a result of adoption of the 1970 S.I.C. Estimates affected are Major Group 3, Rubber and Plastic Products Industries; Major Group 5, Textile Industries and Major Group 20, Miscellaneous Manufacturing Industries.

Because of the changes in the Standard Industrial Classification, Plastic Fabricating Industries, n.e.s., is included in Major Group 3. Under the 1960 S.I.C. this industry was a part of Major Group 20. Linoleum and Coated Fabrics Industries are in Major Group 20 now. In the former classification, this industry was part of Major Group 5. The remaining 17 Major Groups are not affected by the re-classification.

### Economic Use Group Classification

With one major exception, the series in Table 4, where industry estimates are aggregated according to an economic use classification, are very similar in content to those previously published. The exception is that, for the period from 1970 to date, the motor vehicle manufacturers' industry has been moved from the series for Durable Consumer Goods to Export-based Industries.

### Selected Individual Industries

Table 5, Estimated Value of Shipments, Orders and Inventories in Selected Individual Industries, will be restored in future issues of Catalogue 31-001. Because of the change

## EXPLICATIONS DES RÉVISIONS

Les séries publiées dans ce numéro ont été révisées depuis janvier 1970 à ce jour, pour les aligner sur la Classification des activités économiques de 1970. Elles ont été ajustées en fonction des données repères du recensement des manufactures de 1971 et elles comportent d'autres changements qui tiennent compte des besoins et des interprétations présents.

### Agrégats récapitulatifs

Si l'on considère les chiffres pour l'ensemble des industries manufacturières, la C.A.E. de 1970, comprend tous les établissements figurant déjà dans la C.T.I. de 1960, à l'exception de deux cas relativement mineurs: les ateliers de tailleur à façon, qui font maintenant partie du commerce de détail, et les établissements exploitant principalement des moulins d'écorçage, et qui font partie de l'exploitation forestière. Puisque ces deux industries ne représentent qu'une petite fraction du secteur de la fabrication, leur re-classification dans d'autres groupes n'a eu aucun effet notable sur les séries des agrégats récapitulatifs des tableaux 1, 2 et 3: total des livraisons par province pour l'ensemble des industries, total pour l'ensemble du Canada et total par industries de biens durables et non durables. Les différences entre ces séries et celles publiées antérieurement sont imputables à de nouveaux repères et à quelques changements dans l'interprétation des données, et non pas à la re-classification.

### Total des groupes d'industries

Le tableau 3, qui donne les livraisons, les commandes et les stocks par groupe d'industries, comprend certains ajustements entraînés par l'adoption de la C.A.E. de 1970. Les estimations touchent le groupe 3 "Industrie du caoutchouc et des produits en matière plastique", le groupe 5 "Industrie textile" et le groupe 20 "Industries manufacturières diverses".

En raison des changements apportés à la Classification des activités économiques, l'industrie "Fabrication d'articles en matière plastique, n.c.a." est comprise dans le groupe 3. La C.T.I. de 1960 la classait dans le groupe 20. L'industrie des linoléums et des tissus enduits fait maintenant partie du groupe 20, alors que dans l'ancienne classification elle faisait partie du groupe 5. Les 17 autres groupes n'ont pas été touchés.

### Classification des groupes selon l'utilisation économique

À une exception importante près, les séries du tableau 4, où les estimations des industries sont agrégées selon l'utilisation économique, sont essentiellement semblables à celles publiées antérieurement. En effet, pour la période allant de 1970, à ce jour, l'industrie de la fabrication des véhicules automobiles a été transférée de la série des industries des biens de consommation durables à celle des industries orientées vers l'exportation.

### Certaines industries particulières

Le tableau 5 "Valeur estimative des livraisons, commandes et stocks de certaines industries particulières" figurera de nouveau dans les numéros ultérieurs de la publication n° 31-001. En raison du

in the classification system there will be some changes in content from series in earlier editions, but, to maintain continuity of the time series, differences in the table's content will be held to a minimum. Future issues will also contain current monthly estimates of shipments by selected major group in most provinces.

#### Other Changes

As a result of a different interpretation of the components of inventory, the series of estimates of raw materials, goods-in-process and finished products values in the Tobacco Industry Group and the Wood Industry Group are not comparable with similarly defined series in previously published data.

#### Linking

Users who may wish to "link" series may do so by using the previously published data from 1970 to the end of 1973 in conjunction with the series in this publication which cover the same period.

changement de classification, le contenu des séries différera quelque peu au début, mais, pour assurer la continuité des séries chronologiques, les différences dans le contenu des tableaux seront réduites au minimum. Les prochains numéros comporteront également des estimations courantes mensuelles des livraisons pour certains groupes dans la plupart des provinces.

#### Autres changements

À la suite d'une différence d'interprétation des éléments de stocks, les séries des estimations relatives aux matières brutes, aux produits en cours et aux produits finis du groupe de l'industrie du tabac et du groupe de l'industrie du bois ne sont pas comparables aux séries ayant une définition semblable dans des publications antérieures.

#### Raccordement

Les utilisateurs qui désirent "raccorder" les séries peuvent le faire en se servant des données publiées antérieurement de 1970 à la fin de 1973 conjointement avec les séries de la présente publication couvrant la même période.

HIGHLIGHTSFAITS SAILLANTS

JANUARY - 1974 - JANVIER

(Unless otherwise noted, all values referred to here have been adjusted for seasonal variation. Estimates for the current month are preliminary and for the preceding month, revised.)

- Canadian manufacturers' shipments increased 5.4% from December to January 1974 to reach a total value of \$6,285.6 million. The total value of new orders received, at \$6,504.7 million, was 1.4% higher in January than during the previous month and the backlog of unfilled orders increased 2.8% to \$8,153.9 million.
- The dollar value of manufacturers' inventory was higher in all components, with the total value of owned stocks estimated at \$11,418.1 million, an increase of 3.2%. The ratio of total inventory owned to shipments at 1.74 remained relatively low.
- New orders in durable goods producing industries declined 3.1% during the month but the unfilled orders backlog was 2.2% higher at the month end. Shipments of durable goods increased 6.1% to \$2,946.4 million. In this group of industries, inventories of raw materials grew 3.9% and of finished products, 1.4%. The estimated value of goods in process was down 0.6%.
- Shipments of non durable goods producing industries increased 4.7% to \$3,339.2 million during the month. The value of new orders received, at \$3,416.2 million, was 5.8% higher than in December. Inventory values for this group were also higher, with the value 4.4% above the level of December, 1973.
- Reflecting higher valuation, inventory owned in the Petroleum and Coal Products Industries increased \$52.6 million or 11.9% over the month. The estimated value of the raw materials inventory increased \$30 million and that of finished products, \$17.4 million. The preliminary estimate of shipments in this industry was, however, just 0.5% higher.
- Shipments, not adjusted for seasonal variation, were \$297.5 million higher in January than at month earlier. Unadjusted for seasonality, Ontario shipments increased \$257.7 million and those in Quebec, \$45.7 million. There was a drop of \$22.7 million in the total for British Columbia and a decline of \$500,000 in Manitoba shipments. In other provinces, the estimates increased slightly.

(Sauf indication contraire, toutes les valeurs citées ici ont été désaisonnalisées. Les estimations du mois courants sont préliminaires et celles du mois précédent, révisées.)

- De décembre à janvier 1974, les livraisons du secteur canadien de la fabrication ont augmenté de 5.4 % pour atteindre une valeur totale de 6,285.6 millions de dollars. La valeur totale des commandes nouvelles reçues s'est chiffrée en janvier à 6,504.7 millions de dollars soit une hausse de 1.4 % par rapport au mois précédent, et la valeur des commandes en carnet a augmenté de 2.8 % pour se fixer à 8,153.9 millions.
- La valeur des stocks des fabricants a augmenté dans toutes les industries constitutantes, la valeur totale des stocks possédés passant à 11,418.1 millions de dollars soit une augmentation de 3.2 %. Le rapport des stocks possédés aux livraisons est resté relativement bas, soit 1.74.
- Les nouvelles commandes aux industries de biens durables ont baissé de 3.1 % au cours du mois, mais les commandes en carnet avaient progressé de 2.2 % en fin de mois. Les livraisons de biens durables sont passées à 2,946.4 millions de dollars, soit une augmentation de 6.1 %. Pour ce groupe d'industries, les stocks de matières brutes et de produits finis ont augmenté respectivement de 3.9 % et de 1.4 %. La valeur estimative des biens en cours a diminué de 0.6 %.
- Les livraisons des industries de biens non durables ont augmenté de 4.7 % pour passer à 3,339.2 millions de dollars au cours du mois observé. La valeur des nouvelles commandes reçues s'est chiffrée à 3,416.2 millions de dollars, soit une hausse de 5.8 % par rapport à décembre. La valeur des stocks de ce groupe s'est également accru de 4.4 % par rapport à décembre 1973.
- À la suite d'une réévaluation, les stocks détenus par l'industrie du pétrole, du charbon et leurs dérivés se sont chiffrés à 52.6 millions de dollars, soit une augmentation de 11.9 % au cours du mois. La valeur estimative des stocks de matières brutes et de produits finis est passée à 30 millions et à 17.4 millions de dollars respectivement. Toutefois, les estimations préliminaires des livraisons de cette industrie n'indiquaient qu'une augmentation de 0.5 %.
- Les livraisons en janvier, avant désaisonnalisation, ont progressé de 297.5 millions de dollars par rapport au mois précédent. Avant désaisonnalisation également, les livraisons de l'Ontario et du Québec ont augmenté de 257.7 millions et de 45.7 millions de dollars respectivement. La Colombie-Britannique a accusé pour sa part une baisse de 22.7 millions de dollars dans l'ensemble et les livraisons du Manitoba sont tombées de \$500,000. Les estimations ont augmenté légèrement pour les autres provinces.

CONCEPTS AND METHODS

Inventories, shipments and orders values in this publication are monthly projections of annual census of manufactures values based on returns from a stratified, systematic sample of manufacturing establishments. The data in the January, 1974 publication are the first to be adjusted to the 1971 census. Values for years prior to and including 1971 have been benchmarked to the relevant census and the aggregate of monthly shipments in those years should correspond with published census values. Because the monthly estimates subsequent to 1971 are projections, these totals are subject to adjustment when more recent census data become available. Inventory estimates for December, published here, differ from year-end census values to the extent that census totals include individual establishment reports for fiscal years that may end on dates other than December 31. In addition, some components of inventory are included in the monthly survey's benchmark value that may not be included in census inventories. Unfilled orders are published for industries where maintenance of a continuing record of the value of an establishment's backlog is a normal part of the accounting procedure.

The population is divided into groups of large, medium and small establishments according to the total value of shipments reported for the census year. Monthly values are sought for all large establishments and a sample is chosen separately for each of the other two groups. Sample unit values are weighted according to the inverse of their probability of selection. This sample is revised annually in accordance with the census base. To facilitate timely response from company accounting departments, combination reports are accepted from companies with more than one establishment. Estimates of current values are accepted from establishments where the inventory and unfilled orders levels are not measured at the end of each accounting period. There are about 10,000 establishments in the reporting panel.

Isolation of component values of inventory by level of fabrication in each industry, where possible, is important for economic studies as well as for derivation of production values. To facilitate this, respondents are asked to report their book values of raw materials, work in process, finished products and progress payments separately. The inventory levels are calculated on a Canada-wide basis, not by province.

Both inventory held and inventory owned are published. The difference, inventory held but not owned, is the value of progress payments received by manufacturers for partially completed items such as aircraft, ships or structures using fabricated steel. As work proceeds on such items, total inventory values increase until the time of delivery. By deducting the balance or progress payments on manufacturers' books from total inventory, the value of manufacturers' investment in inventory is derived. At the same

CONCEPTS ET MÉTHODES

Les chiffres sur les stocks, les livraisons et les commandes qui figurent dans cette publication sont des projections mensuelles des résultats du recensement annuel des manufactures établies à partir des déclarations d'un échantillon stratifié et systématique d'établissements manufacturiers. Les données que contient la publication de janvier 1974 sont les premières qui soient ajustées en fonction du recensement de 1971. Les chiffres pour les années jusqu'à 1971 inclusivement ont été raccordés aux recensements en cause et la somme des livraisons mensuelles de ces années doit être égale aux résultats des recensements qui ont été publiés. Comme les estimations mensuelles postérieures à 1971 sont des projections, elles pourront être rectifiées lorsqu'on disposera des données de recensement plus récentes. Les estimations sur les stocks publiées dans ce bulletin sont celles de décembre; elles diffèrent donc des chiffres du recensement se rapportant à la fin de l'année dans la mesure où les totaux du recensement comprennent les déclarations de certains établissements pour des années financières qui peuvent prendre fin à d'autres dates qu'au 31 décembre. En outre, certains éléments des stocks compris dans la valeur-repère de l'enquête mensuelle peuvent ne pas être compris dans les stocks du recensement. Les commandes en carnet sont publiées pour les industries où la comptabilité normale prévoit de consigner la valeur des commandes en souffrance des établissements d'une manière suivie.

La population se divise en trois groupes d'établissements (grands, moyens et petits) suivant la valeur totale des livraisons déclarées pour l'année de recensement. On demande des déclarations mensuelles à tous les grands établissements et on tire un échantillon séparé pour chacun des deux autres groupes. Les valeurs de l'échantillon sont pondérées en relation inverse de la probabilité qu'elles soient choisies. Cet échantillon est révisé annuellement suivant les résultats du recensement. Dans le but d'aider les services de comptabilité des sociétés à envoyer leurs déclarations à temps, Statistique Canada accepte une déclaration globale pour les sociétés ayant plus d'un établissement et une estimation des chiffres courants pour les établissements dont les stocks et les commandes en carnet ne sont pas recensés à la fin de chaque exercice comptable. On compte environ 10,000 établissements qui produisent des déclarations.

Il est important d'isoler les chiffres des éléments des stocks selon le stade de fabrication dans chaque industrie, lorsque c'est possible, afin de faire des études économiques et des extrapolations des chiffres de production. À cet effet, on demande aux enquêtés de déclarer séparément la valeur comptable de leurs matières premières, de leurs produits en cours, de leurs produits finis et de leurs acomptes à valoir. Les niveaux des stocks sont calculés pour l'ensemble du Canada et non au niveau provincial.

On publie la valeur des stocks détenus et des stocks possédés. La différence entre les deux donne la valeur des acomptes versés par les fabricants sur des produits dont la fabrication n'est qu'en partie achevée comme les avions, les bateaux ou des constructions qui utilisent des semi-produits en acier. À mesure que la fabrication de ces produits avance, la valeur globale des stocks augmente jusqu'au moment de la livraison. En déduisant le solde des acomptes comptabilisés par les fabricants de l'ensemble des stocks, on obtient la somme investie dans les stocks par les fabricants. De même, en tenant compte des

time, by reflecting the receipt of progress payments in shipments each month, it is possible to reduce the distortion in the affected series that would be caused when responding companies finally treat such items of relatively high value as completed sales.

Most establishments that maintain order books strike a value of unfilled orders at the end of each accounting period. The survey seeks this value which is defined as orders received but not shipped or treated as a sale whether or not work has been done on them or they can be filled from existing stocks. No estimate of this value is made for those industries where orders are customarily filled as received from stocks on hand and orders books are, therefore, not generally maintained.

New orders, a series of considerable economic interest, is a residual value derived from shipments and unfilled orders. All shipments within any month result from an order received either during that month or at some earlier time. Because unfilled orders are measured, the new orders are the total shipments within any month plus the change in the total of unfilled orders from the end of the previous month to the end of the month under review.

Because a constant sample is used between census revisions, values must be inputted for each establishment if no response has been received by compilation time. This is largely done by mechanical methods which take into account the activity of similar establishments from which reports have been received. Calculation of revised estimates for the immediately prior month in conjunction with preliminary estimates for the current month permits use of values reported too late for the first compilation. When respondents report values for periods earlier than that of the revised current estimates, the responses are used to correct the trends when the series are updated to new census benchmarks.

Definitions, classifications and groupings are taken from the census of manufactures.

The January, 1973 issue of this publication contains a more detailed description of the concepts and survey methods for these series.

#### Historical Series

Major series published in this issue are stored in CANSIM, the computerized time series data bank of Statistics Canada. All or any part of these series may be purchased on magnetic tape or as computer print-outs. For further information direct inquiries to:

acomptes à valoir dans les livraisons mensuelles, on peut réduire la distorsion qui surviendrait dans les séries en cause au moment où les sociétés observées considèrent en fin de compte des produits d'une valeur relativement grande comme des ventes achevées.

La plupart des établissements qui tiennent des carnets de commandes établissent la valeur des commandes en carnet à la fin de chaque exercice comptable. Lors de l'enquête, nous demandons cette valeur, qui est considérée comme commandes reçues mais non encore expédiées, que des travaux aient été effectués ou non à leur égard, lorsque la commande peut être honorée à partir des stocks existants. Cette valeur n'est pas estimée dans le cas des entreprises qui exécutent habituellement les commandes dès réception, à partir de leurs stocks et qui par conséquent ne tiennent pas de carnet de commande.

Les séries sur les nouvelles commandes, qui présentent beaucoup d'intérêt du point de vue économique, donnent la valeur résiduelle établie à partir des livraisons et des commandes en carnet. Toutes les livraisons effectuées au cours d'un mois donné résultent d'une commande reçue soit pendant ce mois, soit avant. Étant donné qu'on évalue les commandes en carnet, les nouvelles commandes représentent le total des livraisons au cours d'un mois donné plus la différence entre le total des commandes en carnet à la fin du mois précédent et le total des commandes en carnet à la fin du mois observé.

Étant donné qu'un échantillon constant est utilisé entre les révisions censitaires, il faut imputer des données pour chaque établissement lorsqu'on n'a pas les déclarations au moment de l'exploitation des données. L'imputation des données se fait surtout par des moyens mécaniques qui tiennent compte de l'activité d'établissements semblables qui ont fait parvenir des déclarations. Le calcul des estimations révisées pour le mois précédent et des estimations préliminaires pour le mois observé permet d'utiliser les données déclarées trop tard pour la première compilation. Lorsque les répondants déclarent les chiffres correspondants aux périodes antérieures à celle des estimations révisées actuelles, les réponses servent à corriger les tendances lorsque les séries sont mises à jour d'après les nouvelles données repêrées du recensement.

Les définitions, les classifications et les groupes sont ceux du recensement des manufactures.

Le numéro de janvier 1973 de cette publication contient une description plus détaillée des concepts et des méthodes d'enquête de cette série.

#### Séries chronologiques

Les séries importantes publiées dans cette livraison sont stockées dans le CANSIM, banque électronique de données sur les séries chronologiques de Statistique Canada. On peut acheter toutes ces séries ou une partie d'entre elles sur bandes magnétiques ou sous forme d'états mécanographiques. Pour tout renseignement complémentaire, s'adresser au:

### Seasonal Adjustment

The seasonal adjustment method applied to the series is a computerized ratio-to-moving average method in use at Statistics Canada. It is the standard computer program to apply the X-11 version of the U.S. Bureau of the Census Method II.

### Months for Cyclical Dominance

The MCD or Months for Cyclical Dominance values at the head of each column of seasonally adjusted values indicates the smallest span of months for which the average change in the cyclical factor is greater than that for the irregular factor. For the smoothest series the MCD is 1, for the most erratic series it is 6. Application of a moving average of the period of the MCD will tend to smooth irregular movements that may obscure the underlying trend-cycle.

### Désaisonnalisation

On désaisonnalise des séries en calculant par ordinateur le rapport à la moyenne mobile, suivant les méthodes utilisées à Statistique Canada. Il s'agit en l'occurrence du programme normalisé qui sert à appliquer les versions X-11 de la méthode II du U.S. Bureau of the Census.

### Mois de dominance cyclique

Les valeurs M.D.C. (mois de dominance cyclique) en tête de chaque colonne de valeurs désaisonnalisées indiquent le plus petit nombre de mois pour lequel la variation moyenne du facteur cyclique est plus grande que celle du facteur d'irrégularité. Le M.D.C. est de 1 pour les séries les plus régulières et de 6 pour les plus fluctuantes. L'application d'une moyenne mobile de la période des M.D.C. aidera à lisser les mouvements irréguliers qui pourraient masquer la tendance cyclique implicite.

TABLE 3

- (1) The value of Unfilled Orders and therefore, of New Orders for industries in major groups - 1, 2, 6, 8, 9, 10, 17, 18 and 19 is small and sample coverage is not adequate to provide separate estimates for them.
- (2) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

Note: Figures may not add due to rounding.

TABEAU 3

- (1) Pour ce qui est des industries comprises dans les groupes 1, 2, 6, 8, 9, 10, 17, 18 et 19, la valeur des commandes en carnet et, par conséquent, celle des nouvelles commandes est faible. La portée restreinte de l'échantillon ne permet pas de faire des estimations distinctes dans ces deux cas.
- (2) La valeur des stocks détenus mais non possédés de ce groupe est très faible et la portée restreinte de l'échantillon ne permet pas de fournir des données distinctes. Les estimations visant ce genre de stocks sont comprises dans l'ensemble des stocks détenus; en pratique, on peut considérer ce poste comme l'équivalent des stocks possédés.

Nota: Les chiffres ne totalisent peut-être pas en raison de l'arrondissement.
