HIGHLIGHTS

JULY - 1975 - JUILLET

(Unless otherwise noted, all values referred to here have been adjusted for seasonal variation. The estimates of the current month are preliminary and for the preceding month, revised. Estimates are published according to the 1970 Standard Industrial Classification and are projected from 1972 Census of Manufacturers values.)

- The estimated value of total manufacturing shipments in July was \$7,351.0 million, an increase of \$234.3 million or 3.3% from the revised June value of \$7,116.7 million. Unadjusted shipments fell by \$470.0 million to \$6,949.6 million.
- Most of the increase was in shipments of the durable goods industries, which rose by 6.7%. Shipments of the non-durable goods industries were up 0.6%. All the durable goods major groups showed increased shipments except Major Group 16, Electrical Products Industries, which had a 1.7% decline. Shipments of Major Group 14, Machinery Industries, rose 11.4%, while those of Major Group 15, Transportation Equipment Industries were 11.6% higher.
- The total of manufacturing shipments in the first seven months of 1975, unadjusted for seasonality, was \$48,533.9 million, up 6.9% from the corresponding period in 1974. Seasonally adjusted shipments in the three months May, June and July, 1975 were 4.5% higher than in the months of February, March and April, 1975.
- Total manufacturing inventory owned fell by 0.4% in July. Inventories of raw materials and finished products declined by 1.3% and 0.3%. Levels of total inventory owned were lower in both the durable and non-durable goods industries, by 0.6% and 0.3% respectively.
- The ratio of total inventory owned to shipments, seasonally adjusted, fell from 2.14:1 in June to 2.07:1 in July. The ratio of finished products to shipments decline to 0.70:1 in July from 0.73:1 in June.
- New orders in all manufacturing industries rose 2.2% in July but the backlog of unfilled orders was 1.7% lower than in June. The level of unfilled orders in the durable goods industries fell 2.2% in July. In Major Group 16, Electrical Products Industries, unfilled orders were down 7.3%.
- In the classification of industries according to their economic use, shipments of Machinery and Equipment Industries rose 10.4%.
- Not seasonally adjusted, shipments fell in most provinces. Nova Scotia, Ontario and British Columbia shipments, down 8.4%, 8.2%, and 11.7% respectively, declined by more than the 6.3% average for Canada. Newfoundland shipments rose 6.0% and Alberta shipments were 3.7% higher in July.

POINTS SAILLANTS

(Sauf indication contraire, toutes les valeurs mentionnées ont été désaisonnalisées. Les estimations du mois observé sont provisoires et celles du mois précédent sont présentées après rectification. Les estimations publiées se fondent sur la Classification des activités économiques de 1970 et sont projetées à partir des valeurs obtenues au recensement des manufactures de 1972).

- La valeur estimative totale des livraisons des fabricants en juillet a été de \$7,351.0 millions, soit 3.3% ou \$234.3 millions de plus que la valeur rectifiée de juin (\$7,116.7 millions). Avant désaisonnalisation, la valeur des livraisons a diminué de \$470.0 millions pour s'établir à \$6,949.6 millions.
- La plus grande partie de cette augmentation est survenue dans les livraisons des industries de biens durables qui ont progressé de 6.7%. Les livraisons des industries de biens non durables ont, pour leur part, augmenté de 0.6%. Tous les groupes d'industries de biens durables ont connu une hausse de leurs livraisons, sauf le groupe 16, Fabrication de produits électriques, où elles ont fléchi de 1.7%. Les livraisons du groupe 14, Fabrication de machines (sauf électriques) ont augmenté de 11.4% et celles du groupe 15, Fabrication d'équipement de transport, de 11.6%.
- Avant désaisonnalisation, la valeur totale des livraisons du secteur de la fabrication s'est chiffrée à \$48,533.9 millions au cours des sept premiers mois de 1975, soit 6.9% de plus que la valeur de la période correspondante en 1974. La valeur désaisonnalisée des livraisons en mai, juin et juillet 1975 a été de 4.5% supérieure à celle des mois de février, mars et avril 1975.
- La valeur totale des stocks possédés par les fabricants a régressé de 0.4% en juillet. Les stocks de matières brutes et de produits finis ont diminué respectivement de 1.3% et 0.3%. Les niveaux de stocks totaux possédés ont fléchi à la fois dans les industries de biens durables (0.6%) et de biens non durables (0.3%).
- Le ratio des stocks possédés/livraisons, après désaisonnalisation, est passé de 2.14:1 en juin à 2.07:1 en juillet. Le ratio des produits finis/livraisons est tombé de 0.73:1 en juin à 0.70:1 en juillet.
- Les nouvelles commandes ont augmenté en juillet de 2.2% dans toutes les industries manufacturières, tandis que la valeur des commandes en carnet diminuait de 1.7% par rapport à juin. Le niveau des commandes en carnet a fléchi de 2.2% en juillet dans les industries de biens durables. Dans le groupe 16, Fabrication de produits électriques, ce niveau a connu une baisse de 7.3%.
- Selon la classification des industries fondée sur l'utilisation économique, la valeur des livraisons des industries des machines et de l'équipement ont progressé de 10.4%.
- Avant désaisonnalisation, les livraisons ont diminué dans la plupart des provinces. En Nouvelle-Écosse, en Ontario et en Colombie-Britannique, elles sont passées respectivement à 8.4%, 8.2% et 11.7%, fléchissements bien supérieurs à la moyenne pour le Canada (6.3%). A Terre-Neuve, les livraisons ont augmenté de 6.0% en juillet et en Alberta, de 3.7%.

CONCEPTS AND METHODS

Inventories, shipments and orders values in this publication are monthly projections of annual census of manufactures values based on returns from a stratified, systematic sample of manufacturing establishments. The data in the March, 1975 publication are the first to be adjusted to the 1972 census. Values for years prior to and including 1972 have been benchmarked to the relevant census and the aggregate of monthly shipments in those years should correspond with published census values. Because the monthly estimates subsequent to 1972 are projections, these totals are subject to adjustment when more recent census data become available. Inventory estimates for December, published here, differ from year-end census values to the extent that census totals include individual establishment reports for fiscal years that may end on dates other than December 31. In addition, some components of inventory are included in the monthly survey's benchmark value that may not be included in census inventories. Unfilled orders are published for industries where maintenance of a continuing record of the value of an establishment's backlog is a normal part of the accounting procedure.

The population is divided into groups of large, medium and small establishments according to the total value of shipments reported for the census year. Monthly values are sought for all large establishments and a sample is chosen separately for each of the other two groups. Sample unit values are weighted according to the inverse of their probability of selection. This sample is revised annually in accordance with the census base. To facilitate timely response from company accounting departments, combination reports are accepted from companies with more than one establishment. Estimates of current values are accepted from establishments where the inventory and unfilled orders levels are not measured at the end of each accounting period. There are about 10,000 establishments in the reporting panel.

Isolation of component values of inventory by level of fabrication in each industry, where possible, is important for economic studies as well as for derivation of production values. To facilitate this, respondents are asked to report their book values of raw materials, work in process, finished products and progress payments separately. The inventory levels are calculated on a Canada-wide basis, not by province.

Both inventory held and inventory owned are published. The difference, inventory held but not owned, is the value of progress payments received by manufacturers for partially completed items such as aircraft, ships or structures using fabricated steel. As work proceeds on such items, total inventory values increase until the time of delivery. By deducting the balance or progress payments on manufacturers' books from total inventory, the value of manufacturers' investment in inventory is derived. At the same time, by reflecting the receipt of progress payments in shipments each month, it is possible to reduce the distortion in the affected series that would be caused when

CONCEPTS ET MÉTHODES

Les chiffres sur les stocks, les livraisons et les commandes qui figurent dans cette publication sont des projections mensuelles des résultats du recensement annuel des manufactures établies à partir des déclarations d'un échantillon stratifié et systématique d'établissements manufacturiers. Les données qui contient la publication de mars 1975 sont les premières qui soient ajustées en fonction du recensement de 1972. Les chiffres pour les années jusqu'à 1972 inclusivement ont été raccordés aux recensements en cause et la somme des livraisons mensuelles de ces années doit être égale aux résultats des recensements qui ont été publiés. Comme les estimations mensuelles postérieures à 1972 sont des projections, elles pourront être rectifiées lorsqu'on disposera des données de recensement plus récentes. Les estimations sur les stocks publiées dans ce bulletin sont celles de décembre; elles diffèrent donc des chiffres du recensement se rapportant à la fin de l'année dans la mesure où les totaux du recensement comprennent les déclarations de certains établissements pour des années financières qui peuvent prendre fin à d'autres dates qu'au 31 décembre. En outre, certains éléments des stocks compris dans la valeur-repère de l'enquête mensuelle peuvent ne pas être compris dans les stocks du recensement. Les commandes en carnet sont publiées pour les industries où la comptabilité normale prévoit de consigner la valeur des commandes en souffrance des établissements d'une manière suivie.

La population se divise en trois groupes d'établissements (grands, moyens et petits) suivant la valeur totale des livraisons déclarées pour l'année de recensement. On demande des déclarations mensuelles à tous les grands établissements et on tire un échantillon séparé pour chacun des deux autres groupes. Les valeurs de l'échantillon sont pondérées en relation inverse de la probabilité qu'elles soient choisies. Cet échantillon est revisé annuellement suivant les résultats du recensement. Dans le but d'aider les services de comptabilité des sociétés à envoyer leurs déclarations à temps, Statistique Canada accepte une déclaration globale pour les sociétés ayant plus d'un établissement et une estimation des chiffres courants pour les établissements dont les stocks et les commandes en carnet ne sont pas recensés à la fin de chaque exercice comptable. On compte environ 10,000 établissements qui produisent des déclarations.

Il est important d'isoler les chiffres des éléments des stocks selon le stade de fabrication dans chaque industrie, lorsque c'est possible, afin de faire des études économiques et des extrapolations des chiffres de production. À cet effet, on demande aux enquêtés de déclarer séparément la valeur comptable de leur matières, de leurs produits en cours, de leurs produits finis et de leurs acomptes à valoir. Les niveaux des stocks sont calculés pour l'ensemble du Canada et non au niveau provincial.

On publie la valeur des stocks détenus et des stocks possédés. La différence entre les deux donne la valeur des acomptes versés par les fabricants sur des produits dont la fabrication n'est qu'en partie achevée comme les avions, les bateaux ou des constructions qui utilisent des semi-produits en acier. À mesure que la fabrication de ces produits avance, la valeur globale des stocks augmente jusqu'au moment de la livraison. En déduisant le solde des acomptes comptabilisés par les fabricants de l'ensemble des stocks, on obtient la somme investie dans les stocks par les fabricants. De même, en tenant compte des acomptes à valoir dans les livraisons mensuelles, on peut réduire la distorsion qui surviendrait dans les séries en

responding companies finally treat such items of relatively high value as completed sales.

Most establishments that maintain order books strike a value of unfilled orders at the end of each accounting period. The survey seeks this value which is defined as orders received but not shipped or treated as a sale whether or not work has been done on them or they can be filled from existing stocks. No estimate of this value is made for those industries where orders are customarily filled as received from stocks on hand and orders books are, therefore, not generally maintained.

New orders, a series of considerable economic interest, is a residual value derived from shipments and unfilled orders. All shipments within any month result from an order received either during that month or at some earlier time. Because unfilled orders are measured, the new orders are the total shipments within any month plus the change in the total of unfilled orders from the end of the previous month to the end of the month under review.

Because a constant sample is used between census revisions, values must be imputed for each establishment if no response has been received by compilation time. This is largely done by mechanical methods which take into account the activity of similar establishments from which reports have been received. Calculation of revised estimates for the immediately prior month in conjunction with preliminary estimates for the current month permits use of values reported too late for the first compilation. When respondents report values for periods earlier than that of the revised current estimates, the responses are used to correct the trends when the series are updated to new census benchmarks.

Definitions, classifications and groupings are taken from the census of manufactures.

The January, 1973 issue of this publication contains a more detailed description of the concepts and survey methods for these series.

cause au moment où les sociétés observées considèrent en fin de compte des produits d'une valeur relativement grande comme des ventes achevées.

La plupart des établissements qui tiennent des carnets de commandes établissent la valeur des commandes en carnet à la fin de chaque exercice comptable. Lors de l'enquête, nous demandons cette valeur, qui est considérée comme commandes reçues mais non encore expédiées, que des travaux aient été effectués ou non à leur égard, lorsque la commande peut être honorée à partir des stocks existants. Cette valeur n'est pas estimée dans le cas des entreprises qui exécutent habituellement les commandes dès réceptions, à partir de leurs stocks et qui par conséquent ne tiennent pas de carnet de commande.

Les séries sur les nouvelles commandes, qui présentent beaucoup d'intérêt du point de vue économique, donnent la valeur résiduelle établie à partir des livraisons et des commandes en carnet. Toutes les livraisons effectuées au cours d'un mois donné résultent d'une commande reçue soit pendant ce mois, soit avant. Étant donné qu'on évalue les commandes en carnet, les nouvelles commandes représentent le total des livraisons au cours d'un mois donné plus la différence entre le total des commandes en carnet à la fin du mois précédent et le total des commandes en carnet à la fin du mois observé.

Étant donné qu'un échantillon constant est utilisé entre les révisions censitaires, il faut imputer des données pour chaque établissement lorsqu'on n'a pas les déclarations au moment de l'exploitation des données. L'imputation des données se fait surtout par des moyens mécaniques qui tiennent compte de l'activité d'établissements semblables qui ont fait parvenir des déclarations. Le calcul des estimations revisées pour le mois précédent et des estimations préliminaires pour le mois observé permet d'utiliser les données déclarées trop tard pour la première compilation. Lorsque les répondants déclarent les chiffres correspondants aux périodes antérieures à celle des estimations révisées actuelles, les réponses servent à corriger les tendances lorsque les séries sont mises à jour d'après les nouvelles données repère du recensement.

Les définitions, les classifications et les groupes sont ceux du recensement des manufactures.

Le numéro de janvier 1973 de cette publication contient une description plus détaillée des concepts et des méthodes d'enquête de cette série.

Seasonal Adjustment

The seasonal adjustment method applied to the series is a computerized ratio-to-moving average method in use at Statistics Canada. It is the standard computer program to apply the X-11 version of the U.S. Bureau of the Census Method II.

Months for Cyclical Dominance

The MCD or Months for Cyclical Dominance values at the head of each column of seasonally adjusted values indicates the smallest span of months for which the average change in the cyclical factor is greater than that for the irregular factor. For the smoothest series the MCD is 1, for the most erratic series it is 6. Application of a moving average of the period of the MCD will tend to smooth irregular movements that may obscure the underlying trend-cycle.

Désaisonnalisation

On désaisonnaliise des séries en calculant par ordinateur le rapport à la moyenne mobile, suivant les méthodes utilisées à Statistique Canada. Il s'agit en l'occurrence du programme normalisé qui sert à appliquer les versions X-11 de la méthode II du *U.S. Bureau of the Census*.

Mois de dominance cyclique

Les valeurs de M.D.C. (mois de dominance cyclique) en tête de chaque colonne de valeurs désaisonnalisées indiquent le plus petit nombre de mois pour lequel la variation moyenne du facteur cyclique est plus grande que celle du facteur d'irrégularité. Le M.D.C. est de 1 pour les séries les plus régulières et de 6 pour les plus fluctuantes. L'application d'une moyenne mobile de la période des M.D.C. aidera à lisser les mouvements irréguliers qui pourraient masquer la tendance cyclique implicite.

Table 3

- (1) The value of Unfilled Orders and therefore, of New Orders for industries in major groups — 1, 2, 6, 8, 9, 10, 17, 18 and 19 is small and sample coverage is not adequate to provide separate estimates for them.
- (2) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

- (1) L'Île-du-Prince Édouard, le Yukon et les Territoires du Nord-Ouest ne sont pas publiés séparément; ils sont inclus dans le total pour le Canada.

Tableau 3

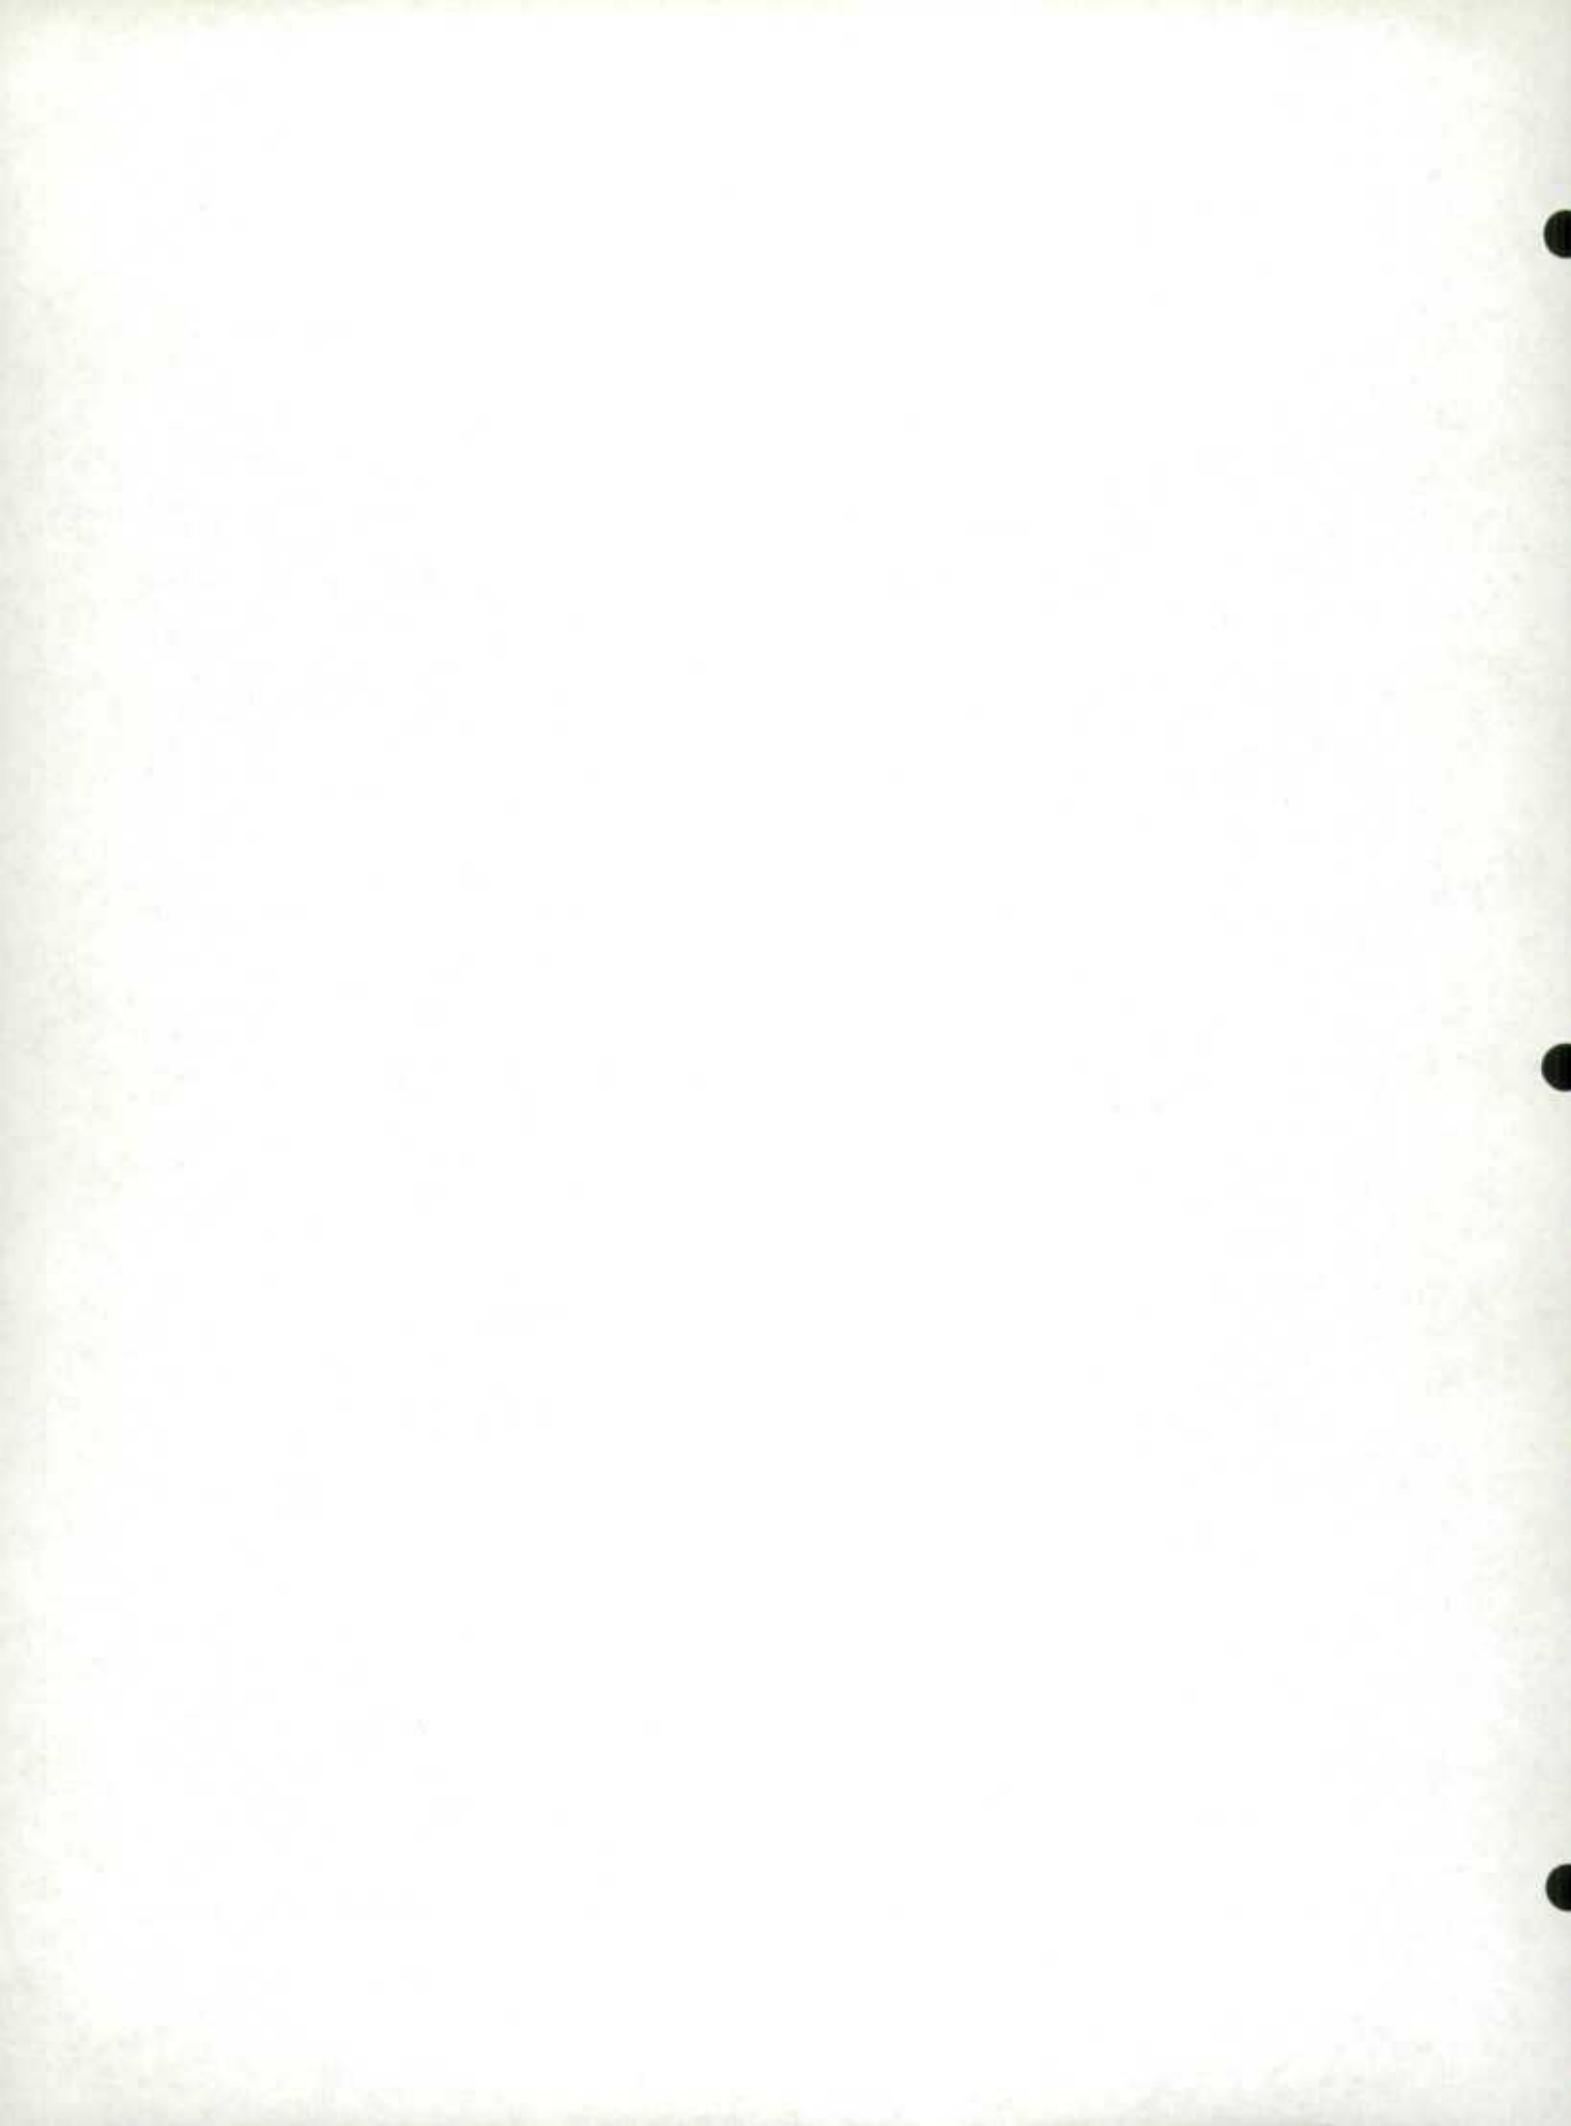

- (1) Pour ce qui est des industries comprises dans les groupes 1, 2, 6, 8, 9, 10, 17, 18 et 19, la valeur des commandes en carnet et, par conséquent, celle des nouvelles commandes est faible. La portée restreinte de l'échantillon ne permet pas de faire des estimations distinctes dans ces deux cas.
- (2) La valeur des stocks détenus mais non possédés de ce groupe est très faible et la portée restreinte de l'échantillon ne permet pas de fournir des données distinctes. Les estimations visant ce genre de stocks sont comprises dans l'ensemble des stocks détenus; en pratique, on peut considérer ce poste comme l'équivalent des stocks possédés.

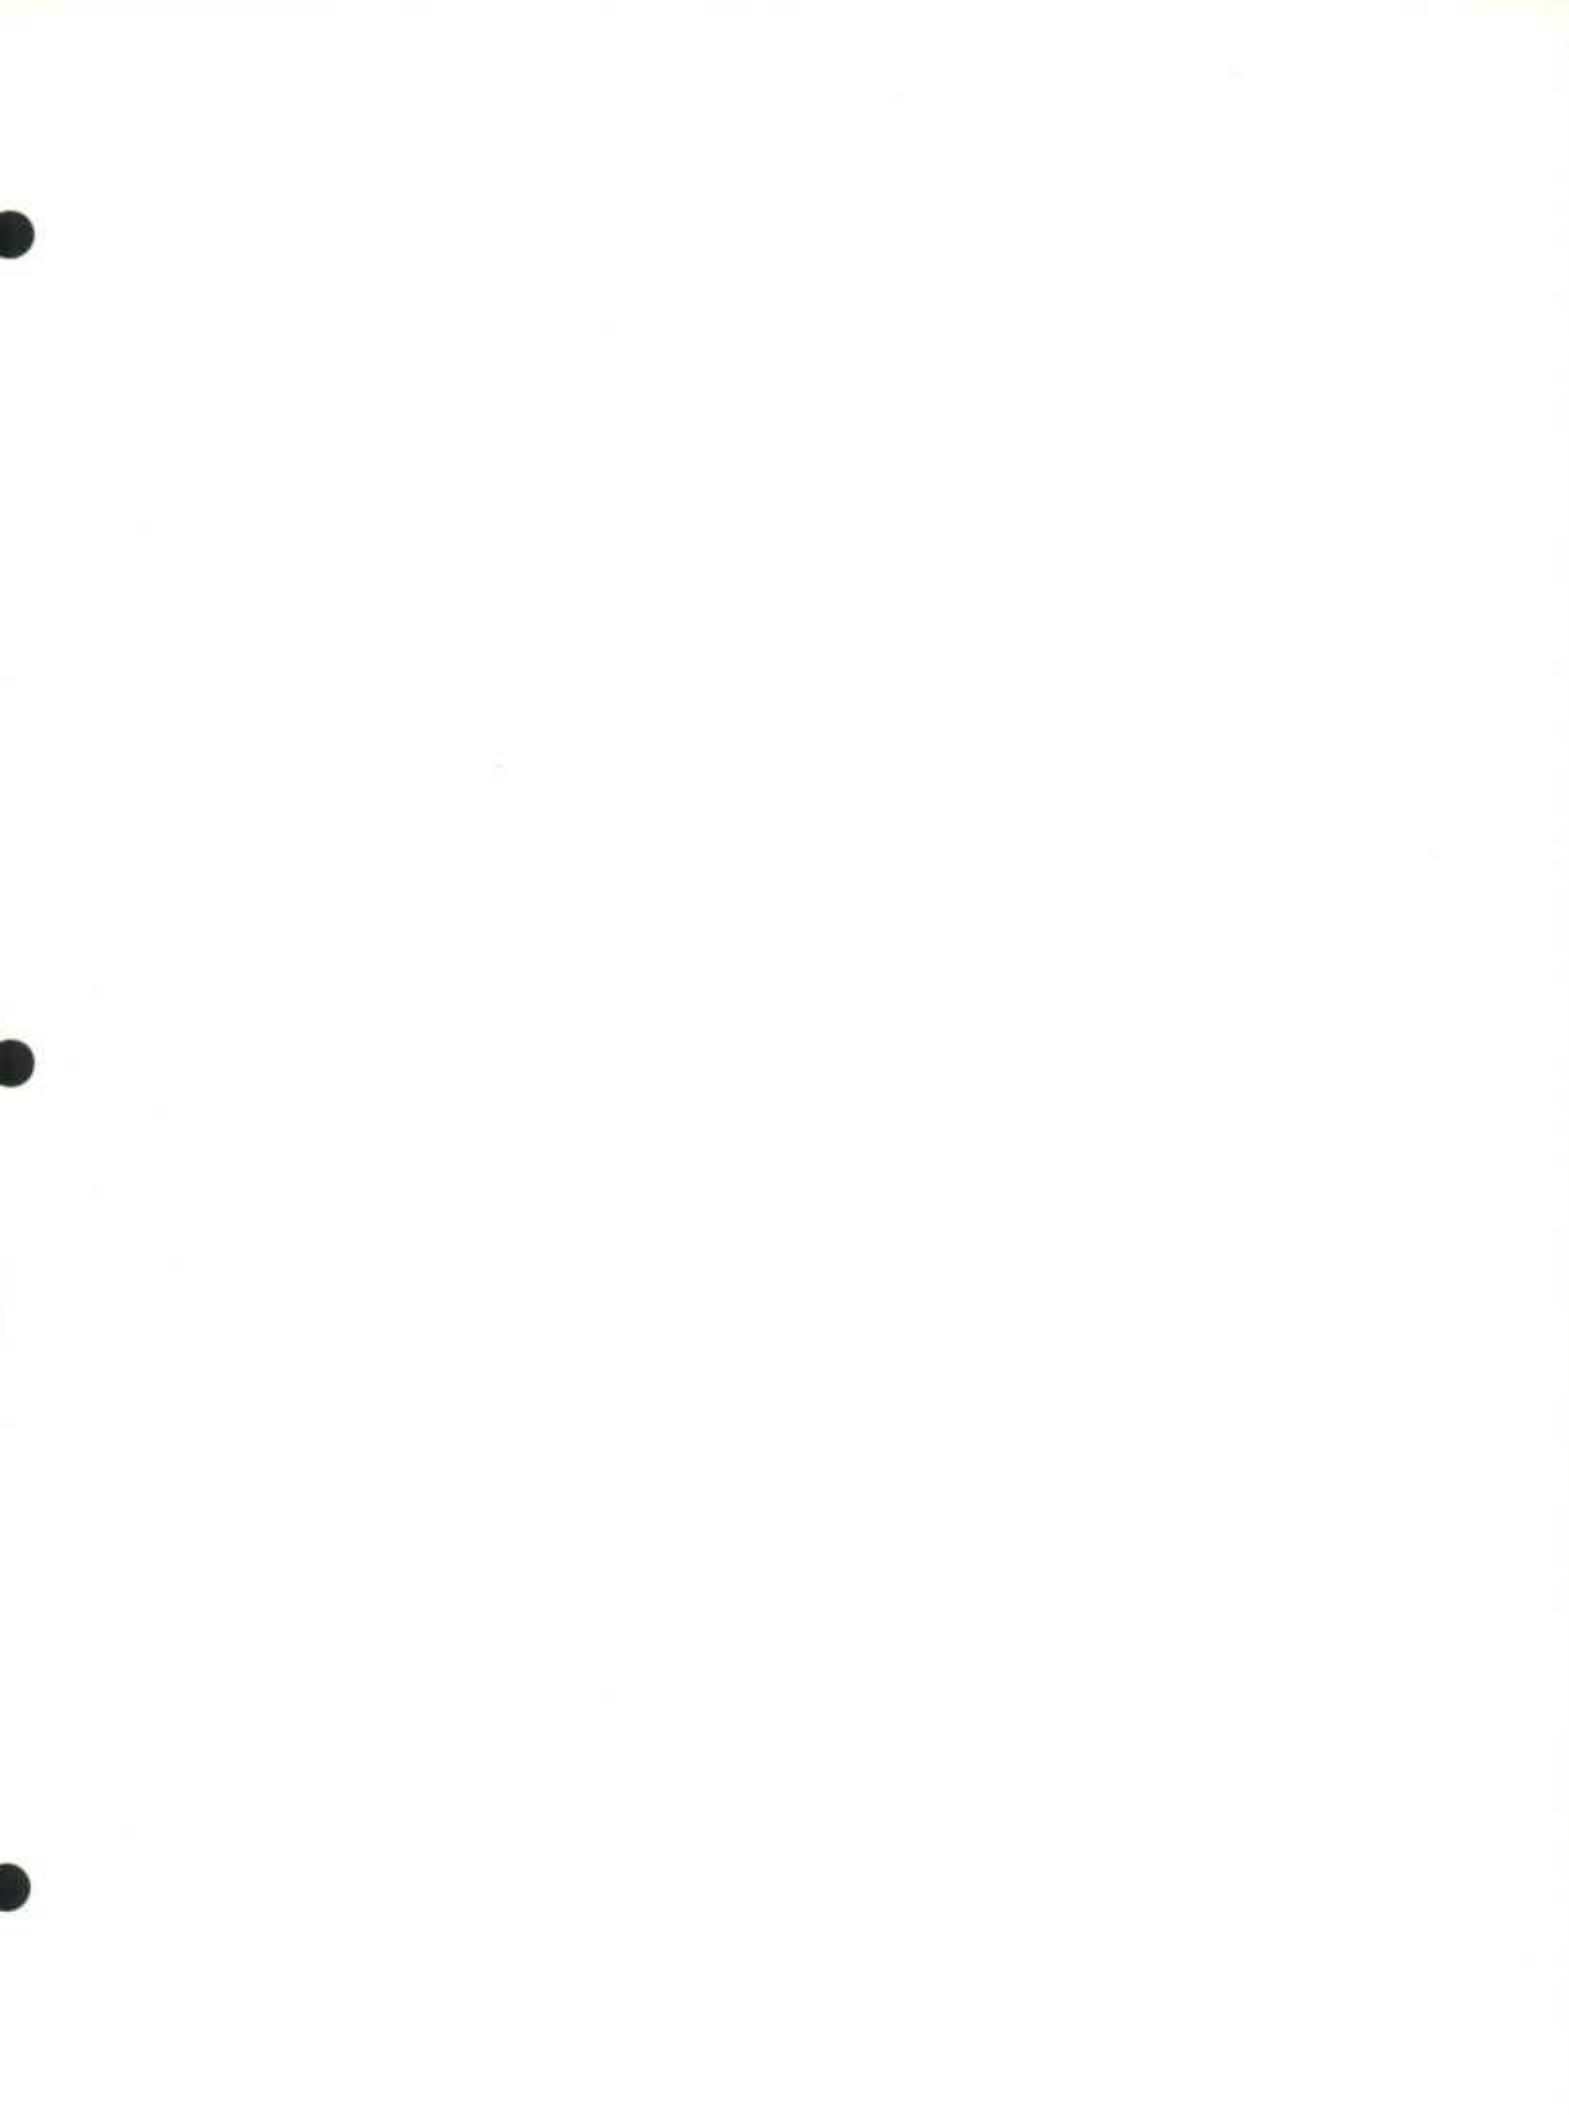

Nota: Les chiffres ne totalisent peut-être pas en raison de l'arrondissement.
