Statistics Canada Statistique Canada

**Data in Many Forms ...**

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

**How to Obtain More Information**

Inquiries about this publication and related statistics or services should be directed to:

Shipments, Inventories and Orders Section
Manufacturing and Primary Industries Division,

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 990-9832) or to the Statistics Canada reference centre in:

| | | | |
|---|---|---|---|
| St. John's | (772-4073) | Sturgeon Falls | (753-4888) |
| Halifax | (426-5331) | Winnipeg | (949-4020) |
| Montréal | (283-5725) | Regina | (359-5405) |
| Ottawa | (990-8116) | Edmonton | (420-3027) |
| Toronto | (966-6586) | Vancouver | (666-3691) |

Toll-free access is provided in all provinces and territories, **for users who reside outside the local dialing area** of any of the regional reference centres.

**How to Order Publications**

This and other Statistics Canada publications may be purchased from local authorized agents and other community bookstores, through the local Statistics Canada offices, or by mail order to Publication Sales and Services, Statistics Canada, Ottawa, K1A 0T6.

**Des données sous plusieurs formes ...**

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordinolingue et le système d'extraction de Statistique Canada.

**Comment obtenir d'autres renseignements**

Toutes demandes de renseignements au sujet de cette publication ou de statistiques et services connexes doivent être adressées à:

Section des livraisons, des stocks et des commandes
Division des industries manufacturières et primaires,

Statistique Canada, Ottawa, K1A 0T6 (téléphone: 990-9832) ou au centre de consultation de Statistique Canada à:

| | | | |

## Symbols

The following standard symbols are used in Statistics Canada publications:

. . figures not available.

. . . figures not appropriate or not applicable.

-- nil or zero.

- - amount too small to be expressed.

P preliminary figures.

r revised figures.

x confidential to meet secrecy requirements of the Statistics Act.

## Signes conventionnels

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada:

. . nombres indisponibles.

. . . n'ayant pas lieu de figurer.

– néant ou zéro.

- - nombres infimes.

P nombres provisoires.

r nombres rectifiés.

x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.

This publication was prepared under the direction of:

- **Harold Nightingale**, Director, Manufacturing and Primary Industries Division
- **Michael J. Issa**, Assistant Director
- **Bill Klein**, Chief, Inventories Shipments and Orders in Manufacturing Industries
- **Jacques J. Lepage**, Unit Head

Cette publication a été rédigée sous la direction de:

- **Harold Nightingale**, directeur, Division des industries manufacturières et primaires
- **Michael J. Issa**, Directeur adjoint
- **Bill Klein**, chef, Stocks,livraisons et commandes des industries manufacturières

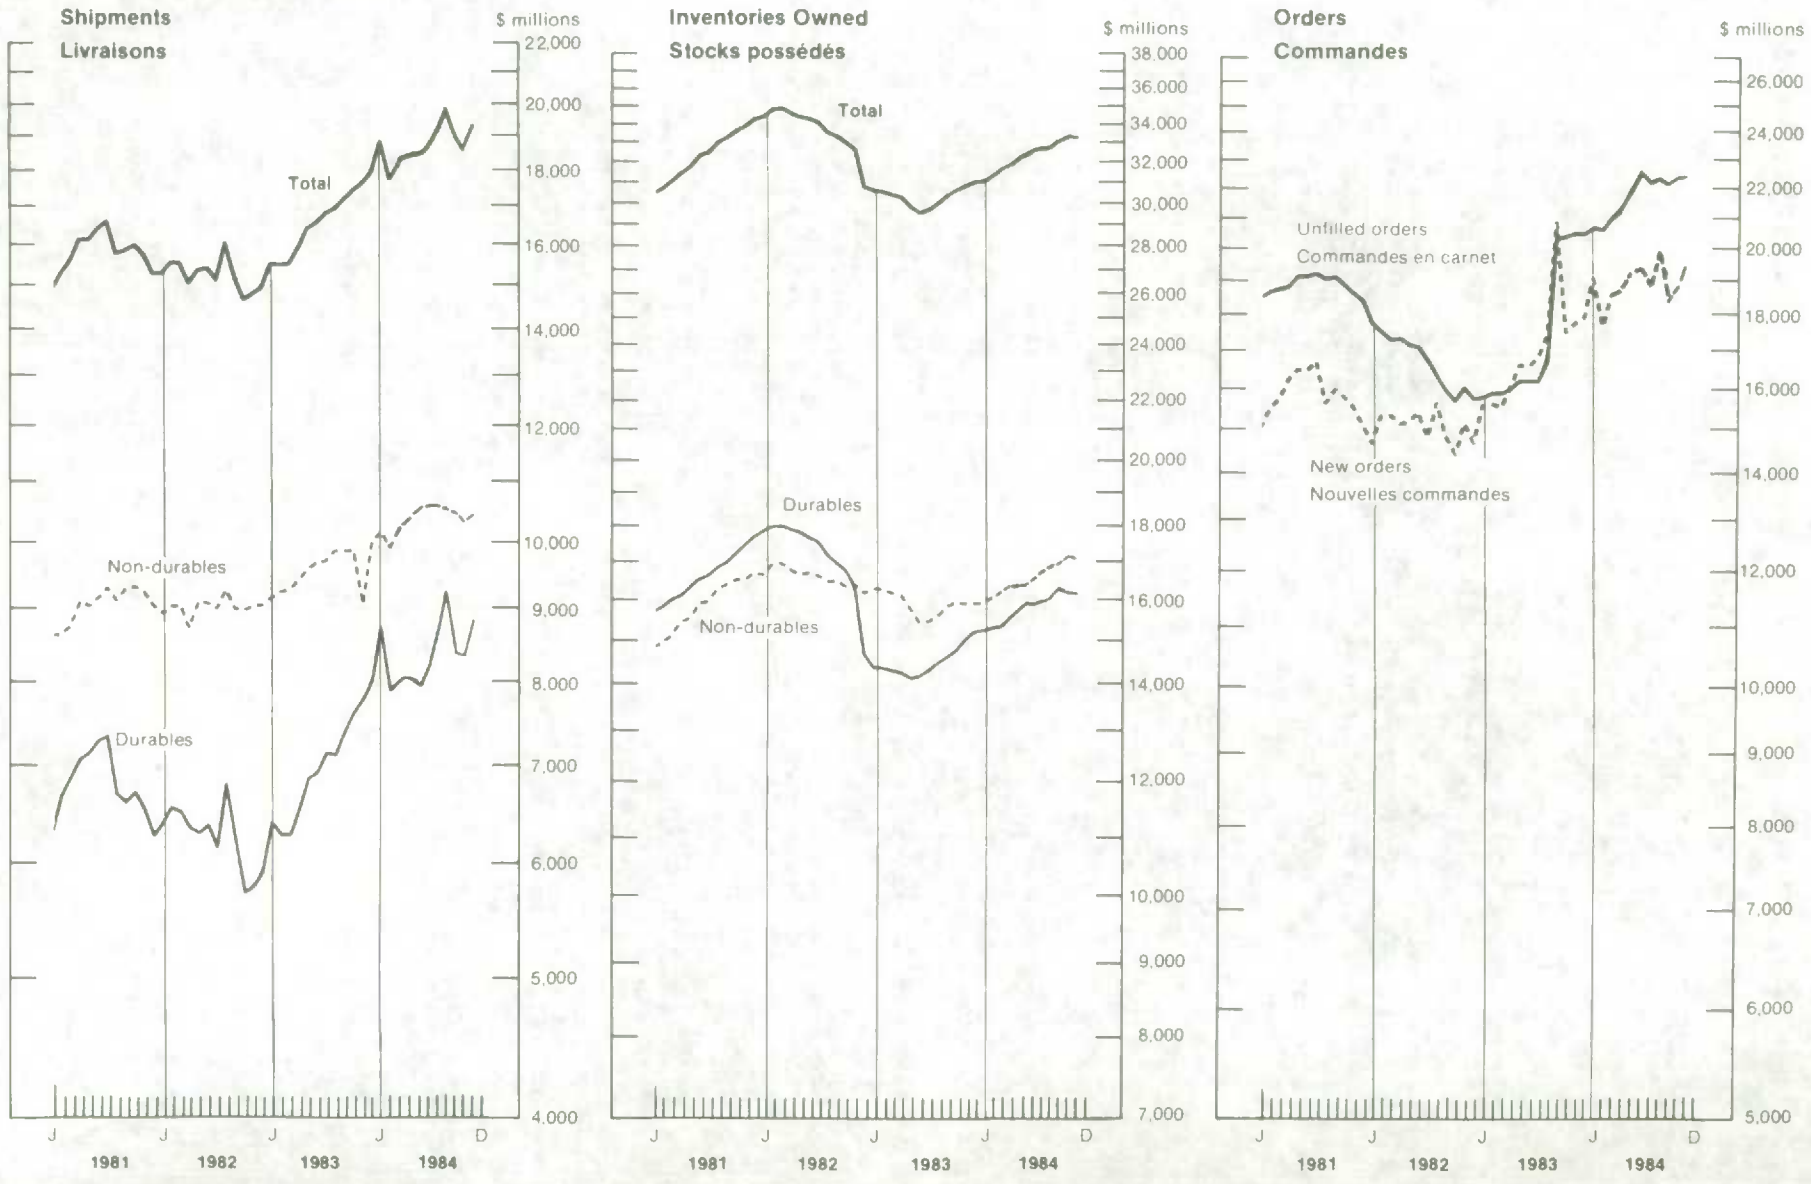
Concepts et méthodes ..... 70

**Manufacturer's Shipments, Inventories and Orders, 1980-1984**

**Les livraisons, les stocks et les commandes des fabricants, 1980-1984**

(Seasonally Adjusted — Chiffres désaisonnalisés)

(Ratio scale — Échelle semi-logarithmique)



## HIGHLIGHTS

## POINTS SAILLANTS

### NOVEMBER — 1984 — NOVEMBRE

- Preliminary estimates show the seasonally adjusted value of shipments in all Canadian manufacturing industries increased 4.1% to $19,368.7 million in November 1984 from the October revised estimate of $18,612.6 million. Shipments of durable goods were up 6.4% to $8,882.6 million from $8,346.9 million; an increase of $376.0 million in transportation equipment industries and an increase of $69.9 million in electrical products industries accounted for most of the gain. Increases of $66.6 million in food and beverage industries and $63.0 million in petroleum and coal products industries were the major contributors to a 2.1% increase in non-durable goods industries, as shipments went from $10,265.7 million to $10,486.1 million.

- Seasonally adjusted inventories owned by manufacturers at the end of November was $33,289.2 million, down 0.2% from the previous month's revised value of $33,340.5 million. This marks the first decline since June 1984. Total inventory held was virtually unchanged at $34,551.7 million from $34,541.4 million, with increased of 1.3% in goods in process and 0.1% in finished products. There was, however, a 0.8% decrease in raw materials.

- The seasonally adjusted ratio of total inventory owned to shipments at the end of November was 1.72:1, down from 1.79:1 in October. The ratio of finished products inventory to shipments went from 0.64:1 in October to 0.62:1 in November.

- The value of new orders received in November, seasonally adjusted, increased 2.9% to $19,431.1 million from the revised estimate of $18,884.2 million. In durable goods industries, new orders with an estimated value of $8,872.5 million were 2.9% higher than the October value of $8,623.7 million. A $657.3 million increase in transportation equipment industries was partly offset by decreases of $230.9 million in metal fabricating industries, $220.3 million in machinery industries and $89.5 million in primary metal industries. In non-durable goods industries, new orders received were valued at $10,558.6 million, up 2.9% from the revised October estimated of $10,260.5 million.

- The seasonally adjusted unfilled orders backlog at the end of November was $22,434.6 million, up 0.3% from the revised October estimate of $22,372.2 million. Unfilled orders in durable goods industries decreased 0.1% to $20,142.5 million from $20,152.6 millions at the end

- Après désaisonnalisation, la valeur des livraisons des industries manufacturières canadiennes s'est établie à $19,368.7 millions en novembre 1984, soit une hausse de 4.1% par rapport au chiffre révisé d'octobre ($18,612.6 millions). Une augmentation de 6.4% a été enregistrée pour les biens durables, qui sont passés de $8,346.9 millions à $8,882.6 millions. Cette hausse est principalement attribuable à un gain de $376.0 millions dans les industries de fabrication d'équipement de transport et à un autre de $69.9 millions dans les industries de fabrication de produits électriques. Les livraisons des biens non durables ont augmenté de 2.1% passant de $10,265.7 millions à $10,486.1 millions. Une augmentation de $66.6 millions dans les industries des aliments et boissons et à une autre de $63.0 millions dans les industries de fabrication de produits du pétrole et du charbon expliquent dans une large mesure l'augmentation des livraisons des biens non durables.

- La valeur désaisonnalisée du total des stocks possédés à la fin de novembre a atteint $33,289.2 millions, soit une baisse de 0.2% par rapport à la valeur révisée du mois précédent de $33,340.5 millions. Il s'agit de la première baisse qu'ont connu les stocks possédés depuis juin 1984. Pour leur part, les stocks détenus sont restés presque inchangés à $34,551.7 millions comparativement à $34,541.4 millions. A ce chapitre, les biens en cours de transformation ont connu une progression de 1.3% et les produits finis de 0.1% tandis que les matières premières ont enregistré un recul de 0.8%.

- Le rapport désaisonnalisé du total des stocks possédés aux livraisons s'est établi à 1.72:1 en novembre, soit une baisse par rapport à celui d'octobre qui était de 1.79:1. Le rapport des produits finis aux livraisons est passé de 0.64:1 à 0.62:1 en novembre.

- La valeur désaisonnalisée des nouvelles commandes dans l'ensemble des industries manufacturières a été estimée à $19,431.1 millions en novembre, ce qui représente une hausse de 2.9% par rapport au mois précédent qui était de $18,884.2 millions. Une augmentation de 2.9% a été enregistrée pour les biens durables qui sont passés de $8,623.7 millions à $8,872.5 millions. Cette progression est principalement attribuable à un gain de $657.3 millions dans les industries de fabrication d'équipement de transport. Des diminutions de $230.9 millions dans les industries de fabrication de produits en métal, de $220.3 millions dans les industries de fabrication de machines et de $89.5 millions dans les industries de première transformation des métaux ont partiellement compensé la hausse. Les nouvelles commandes des biens non durables ont atteint $10,558.6 millions, ce qui représente une hausse de 2.9% par rapport à la valeur révisée d'octobre ($10,260.5 millions).

- La valeur estimative des commandes en carnet, après désaisonnalisation, s'est établie à $22,434.6 millions, soit un gain de 0.3% par rapport au mois précédent qui était de $22,372.2 millions. Les commandes en carnet des biens durables ont diminué de 0.1% passant de $20,152.6 millions à $20,142.5

of October. In non-durable goods industries, the estimate was up 3.3% to $2,292.1 million from $2,219.6 million.

- Not adjusted for seasonal variation, manufacturers' shipments in November 1984 were valued at $19,895.8 million, 1.0% lower than the revised October value of $20,098.9 million. Cumulative shipments for the first 11 months of 1984 were an estimated $207,942.6 million, up 13.7% from the $182,928.6 million estimated for the same period in 1983.

millions alors que celles des biens non durables ont augmenté de 3.3% à $2,292.1 millions en regard de $2,219.6 millions

- On a estimé à $19,895.8 millions les livraisons non désaisonnalisées en novembre 1984, ce qui représente une baisse de 1.0% par rapport à la valeur révisée d'octobre qui était de $20,098.9 millions. Pour les 11 premiers mois de 1984, les livraisons estimatives ont totalisé $207,942.6 millions, soit une hausse de 13.7% par rapport à $182,928.6 millions au cours de la période correspondante de 1983.

## FOOTNOTES

Table 1

(1) Separate series for the Yukon and the Northwest Territories are not published, but provision is made for them in the Canada total.

Table 3-4

(1) The series for raw materials in the petroleum industries; goods in process in the furniture and fixtures industries; and inventory held but not owned in the machinery and equipment, transportation equipment and electrical products industries contain no significant seasonality. Therefore, these series are repeated without adjustment in the tables of seasonally adjusted estimates and aggregates of which they are components. Small differences in the unadjusted values when repeated may result from rounding techniques in data.

**Note:** Figures may not add due to rounding.

## NOTES

Tableau 1

(1) Les séries pour le Yukon et les Territoires du Nord-Ouest ne sont pas publiées; cependant elles sont inclues dans le total pour le Canada.

Tableau 3-4

(1) La série des matières brutes dans l'industrie pétrolière, des biens en cours de transformation dans l'industrie du meuble et des articles d'ameublement et des stocks détenus mais non possédés dans les industries des machines et du matériel, des transports et produits électriques ne présente aucune tendance saisonnière importante. Le tableau de la série désaisonnalisée répète donc les valeurs non corrigées. Les différences minimes entre les séries sont attribuables à la technique d'arrondissement utilisée.

**Nota:** Les chiffres ne totaliseront peut-être pas en raison de l'arrondissement.

## CONCEPTS AND METHODS

Inventories, shipments and orders values in this publication are monthly projections of annual census of manufactures values based on returns from a stratified, systematic sample of manufacturing establishments. The data in the March 1984 publication are the first to be adjusted to the 1981 census. Values for prior years to 1981 have been previously benchmarked to the relevant census and the aggregate of monthly shipments in those years should correspond with published census values. Because the monthly estimates subsequent to 1981 are projections these totals are subject to adjustment when more recent census data become available. Inventory estimates for December, published here, differ from year-end census values to the extent that census totals include individual establishment reports for fiscal years that may end on dates other than December 31. In addition, some components of inventory are included in the monthly survey's benchmark value that may not be included in census inventories. Unfilled orders are published for industries where maintenance of a continuing record of the value of an establishment's backlog is a normal part of the accounting procedure.

The population is divided into groups of large, medium and small establishments according to the total value of shipments reported for the census year. Monthly values are sought for all large establishments and a sample is chosen separately for each of the other two groups. Sample unit values are weighted according to the inverse of their probability of selection. This sample is revised annually in accordance with the census base. To facilitate timely response from company accounting departments, combined reports are accepted from companies with more than one establishment. Estimates of current values are accepted from establishments where the inventory and unfilled orders levels are not measured at the end of each accounting period. There are about 11,000 establishments in the reporting panel.

Isolation of component values of inventory by level of fabrication in each industry, where possible, is important for economic studies as well as for derivation of production values. To facilitate this, respondents are asked to report their book values of raw materials, work in process, finished products and progress payments separately. The inventory levels are calculated on a Canada-wide basis, not by province.

Both inventory held and inventory owned are published. The difference, inventory held but not owned, is the value of progress payments received by manufacturers for partially completed items such as aircraft, ships or structures using fabricated steel. As work proceeds on such items, total inventory values increase until the time of delivery. By deducting the balance of progress payments on manufacturers' books from total inventory, the value of manufacturers' investment in inventory is derived. At the same time, by

## CONCEPTS ET MÉTHODES

Les chiffres sur les stocks, les livraisons et les commandes qui figurent dans cette publication sont des projections mensuelles des résultats du recensement annuel des manufactures établies à partir des déclarations d'un échantillon stratifié et systématique d'établissements manufacturiers. Les données que contient la publication de mars 1984 sont les premières qui soient ajustées en fonction du recensement de 1981. Les chiffres pour les années jusqu'à 1981 inclusivement ont été raccordés aux recensements en cause et la somme des livraisons mensuelles de ces années doit être égale aux résultats de recensements qui ont été publiés. L'échantillon demeure essentiellement constant d'une année à l'autre puisqu'il est tiré de la liste des établissements du recensement annuel des manufactures. On doit recourir à l'imputation pour les établissements ayant déclaré trop tard pour être pris en compte dans le calcul des estimations mensuelles. Comme les estimations mensuelles postérieures à 1981 sont des projections, elles pourront être rectifiées lorsqu'on disposera des données de recensement plus récentes. Les estimations sur les stocks publiées dans ce bulletin sont celles de décembre; elles diffèrent donc des chiffres du recensement se rapportant à la fin de l'année dans la mesure où les totaux du recensement comprennent les déclarations de certains établissements pour des années financières qui peuvent prendre fin à d'autres dates qu'au 31 décembre. En outre, certains éléments des stocks compris dans la valeur-repère de l'enquête mensuelle peuvent ne pas être compris dans les stocks du recensement. Les commandes en carnet sont publiées pour les industries où la comptabilité normale prévoit de consigner la valeur des commandes en souffrance des établissements d'une manière suivie.

La population se divise en trois groupes d'établissements (grands, moyens et petits) suivant la valeur totale des livraisons déclarées pour l'année de recensement. On demande des déclarations mensuelles à tous les grands établissements et on tire un échantillon séparé pour chacun des deux autres groupes. Les valeurs de l'échantillon sont pondérées en relation inverse de la probabilité qu'elles soient choisies. Cet échantillon est revisé annuellement suivant les résultats du recensement. Dans le but d'aider les services de comptabilité des sociétés à envoyer leurs déclarations à temps, Statistique Canada accepte une déclaration globale pour les sociétés ayant plus d'un établissement et une estimation des chiffres courants pour les établissements dont les stocks et les commandes en carnet ne sont pas recensés à la fin de chaque exercise comptable. On compte environ 11,000 établissements qui produisent des déclarations.

Il est important d'isoler les chiffres des éléments des stocks selon le stage de fabrication dans chaque industrie, lorsque c'est possible, afin de faire des études économiques et des extrapolations des chiffres de production. À cet effet, on demande aux enquêtés de déclarer séparément la valeur comptable de leurs matières premières, de leurs produits en cours, de leurs produits finis et de leurs acomptes à valoir. Les niveaux des stocks sont calculés pour l'ensemble du Canada et non au niveau provincial.

On publie la valeur des stocks détenus et des stocks possédés. La différence entre les deux donne la valeur des acomptes versés par les fabricants sur des produits dont la fabrication n'est qu'en partie achevée comme les avions, les bâteaux ou des constructions qui utilisent des semi-produits en acier. À mesure que la fabrication de ces produits avance, la valeur globale des stocks augmente jusqu'au moment de la livraison. En déduisant le solde des acomptes comptabilisés par les fabricants de l'ensemble des stocks, on obtient la somme

reflecting the receipt of progress payments in shipments each month, it is possible to reduce the distortion in the affected series that would be caused when responding companies finally treat such items of relatively high value as completed sales.

Most establishments that maintain order books strike a value of unfilled orders at the end of each accounting period. The survey seeks this value which is defined as orders received but not shipped or treated as a sale whether or not work has been done on them or they can be filled from existing stocks. No estimate of this value is made for those industries where orders are customarily filled as received from stocks on hand and orders books are, therefore, not generally maintained.

New orders, a series of considerable economic interest, is a residual value derived from shipments and unfilled orders. All shipments within any month result from an order received either during that month or at some earlier time. Because unfilled orders are measured, the new orders are the total shipments within any month plus the change in the total of unfilled orders from the end of the previous month to the end of the month under review.

Because the sample is drawn from the list of establishments included in the annual census of manufactures, it remains largely constant from one year to the next. Values must be imputed for those establishments that have not reported in time for compilation of monthly estimates. This is largely done by mechanical methods which take into account the activity of similar establishments from which reports have been received. Calculation of revised estimates for the immediately prior month in conjunction with preliminary estimates for the current month permits use of values reported too late for the first compilation. When respondents report values for periods earlier than those of the revised current estimates, the responses are used to correct the trends when the series are updated to new census benchmarks.

Definitions, classifications and groupings are taken from the census of manufactures.

The January 1973 issue of this publication contains a more detailed description of the concepts and survey methods for these series.

## Historical Series

Major series published in this issue are stored in CANSIM, the computerized time series data bank of Statistics Canada. All or any part of these series may be purchased on magnetic tape or as computer print-outs. For further information direct inquiries to:

General Time Series Staff,
Statistics Canada,
Ottawa, Ontario, K1A 0Z9

investie dans les stocks par les fabricants. De même, en tenant compte des acomptes à valoir dans les livraisons mensuelles, on peut réduire la distorsion qui surviendrait dans les séries en cause au moment où les sociétés observées considèrent en fin de compte des produits d'une valeur relativement grande comme des ventes achevées.

La plupart des établissements qui tiennent des carnets de commandes établissent la valeur des commandes en carnet à la fin de chaque exercise comptable. Lors de l'enquête, nous demandons cette valeur, qui est considérée comme commandes reçues mais non encore expédiées, que des travaux aient été effectués ou non à leur égard, lorsque la commande peut être honorée à partir des stocks existants. Cette valeur n'est pas estimée dans le cas des entreprises qui exécutent habituellement les commandes dès réceptions, à partir de leurs stocks et qui par conséquent ne tiennent pas de carnet de commande.

Les séries sur les nouvelles commandes, qui présentent beaucoup d'intérêt du point de vue économique, donnent la valeur résiduelle établie à partir des livraisons et des commandes en carnet. Toutes les livraisons effectuées au cours d'un mois donné résultent d'une commande reçue soit pendant ce mois, soit avant. Etant donné qu'on évalue les commandes en carnet, les nouvelles commandes représentent le total des livraisons au cours d'un mois donné plus la différence entre le total des commandes en carnet à la fin du mois précédent et le total des commandes en carnet à la fin du mois observé.

De plus, les données sur les livraisons totales pour l'année civile ont été rectifiées sommairement en fonction des données préliminaires du recensement des manufactures sur les livraisons totales cette année-là. L'imputation des données se fait surtout par des moyens mécaniques qui tiennent compte de l'activité d'établissements semblables qui ont fait parvenir des déclarations. Le calcul des estimations revisées pour le mois précédent et des estimations préliminaires pour le mois observé permet d'utiliser les données déclarées trop tard pour la première compilation. Lorsque les répondants déclarent les chiffres correspondants aux périodes antérieures à celle des estimations révisées actuelles, les réponses servent à corriger les tendances lorsque les séries sont mises à jour d'après les nouvelles données repère du recensement.

Les définitions, les classifications et les groupes sont ceux du recensement des manufactures.

Le numéro de janvier 1973 de cette publication contient une description plus détaillée des concepts et des méthodes d'enquête de cette série.

## Series chronologiques

Les séries importantes publiées dans cette livraison sont stockées dans le CANSIM, banque électronique de données sur les séries chronologiques de Statistique Canada. On peut acheter toutes ces séries ou une partie d'entre elles sur bandes magnétiques ou sous forme d'états mécanographiques. Pour tout renseignement complémentaire, s'adresser au:

Service des séries chronologiques générales
Statistique Canada
Ottawa (Ontario) K1A 0Z9

## Seasonal Adjustment

The seasonal adjustment method applied to the series is a computerized ratio-to-moving average method in use at Statistics Canada. It is the standard computer program to apply the X-11 version of the U.S. Bureau of the Census Method II.

Some series containing no significant seasonality or very high irregularity have not been seasonally adjusted. In these cases, unadjusted values are repeated in the tables of seasonally adjusted data. See footnotes for series affected.

## Months for Cyclical Dominance

The MCD or months for cyclical dominance values located at the right of the Cansim databank reference number for seasonally adjusted series, indicates the smallest span of months for which the average change in the cyclical factor is greater than that for the irregular factor. For the smoothest series the MCD is one, for the most erratic series it is six. Application of a moving average of the period of the MCD will tend to smooth irregular movements that may obscure the underlying trend-cycle.

## Désaisonnalisation

On désaisonnalise des séries en calculant par ordinateur le rapport à la moyenne mobile, suivant les méthodes utilisées à Statistique Canada. Il s'agit en l'occurance du programme normalisé qui sert à appliquer les versions X-11 de la méthode II du *U.S. Bureau of the Census.*

Pour quelques séries particulières, il n'y a pas de saisonnalité d'importance, ou il y a trop d'irrégularité. Ces séries n'ont pas été désaisonnalisées. Pour ces cas, les valeurs, sans désaisonnalisation ont été répétées dans les tableaux des séries désaisonnalisées. Voir les notes pour les séries affectées.

## Mois de dominance cyclique

Les valeurs de M.D.C. (mois de dominance cyclique) sont situées à la droite du numéro de référence de la Banque de données de "Cansim" pour les séries désaisonnalisées indiquent le plus petit nombre de mois pour lequel la variation moyenne du facteur cyclique est plus grande que celle du facteur d'irrégularité. Le M.D.C. est de un pour les séries les plus régulières et de six pour les plus fluctuantes. L'application d'une moyenne mobile de la période des M.D.C. aidera à lisser les mouvements irréguliers qui pourraient masquer la tendance cyclique implicite.
