

Inventories shipments and orders in manufacturing industries

January 1986

Stocks, livraisons et commandes des industries manufacturières

Janvier 1986

Data in Many Forms ...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Shipments, Inventories and Orders Section,
Manufacturing and Primary Industries Division,

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 990-9832) or to the Statistics Canada reference centre in:

St. John's	(772-4073)	Sturgeon Falls	(753-4888)
Halifax	(426-5331)	Winnipeg	(949-4020)

Des données sous plusieurs formes ...

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordiolingue et le système d'extraction de Statistique Canada.

Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de cette publication ou de statistiques et services connexes doivent être adressées à:

Section des livraisons, des stocks et des commandes,
Division des industries manufacturières et primaires,

Statistique Canada, Ottawa, K1A 0T6 (téléphone: 990-9832) ou au centre de consultation de Statistique Canada à:

St. John's	(772-4073)	Sturgeon Falls	(753-4888)
Halifax	(426-5331)	Winnipeg	(949-4020)

Inventories, shipments and orders in manufacturing industries

January 1986

Projected from 1982 Census of Manufactures benchmarks with adjustment of 1983 shipments estimates to preliminary census data for that year.

Starting with the January 1985 issue, the tables are now based on the 1980 Standard Industrial Classification (S.I.C.).

Symbols

The following standard symbols are used in Statistics Canada publications:

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- amount too small to be expressed.
- p preliminary figures.
- r revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.

NOTICE TO USERS

Estimates in this publication are subject to revision to accommodate newly-received information. It is advisable always to use data from the most recent issue.

This publication was prepared under the direction of:

- **Basil McCormick**, Assistant Director, Industry Division
- **Henry Glouchkow**, Chief, Inventories Shipments and Orders in Manufacturing Industries
- **Jacques Lepage**, Unit Head

Signes conventionnels

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada:

- .. nombres indisponibles.
- ... n'ayant pas lieu de figurer.
- néant ou zéro.
- nombres infimes.
- p nombres provisoires.
- r nombres rectifiés.
- x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.

AVIS AUX UTILISATEURS

Prière de toujours consulter les numéros de la plus récente publication puisque les estimations qu'elle renferme sont sujettes à révision pour tenir compte des nouveaux renseignements reçus.

Cette publication a été rédigée sous la direction de:

- **Basil McCormick**, Directeur adjoint, Division de l'industrie
- **Henry Glouchkow**, Chef, Stocks, livraisons et commandes des industries manufacturières
- **Jacques Lepage**, Chef de sous-section

HIGHLIGHTS

January 1986

All estimates from January 1982 to January 1986 have been benchmarked to the 1982 Census of Manufactures and for shipments, adjustments have been made to incorporate preliminary Census levels for 1983. Prior to this release, all estimates were benchmarked to the 1981 Census of Manufactures.

These estimates also reflect updates to monthly data not incorporated in previously published data, classification and sample changes, and revised seasonal factors. As a result, estimates from 1982 onward are not directly comparable to previously published data. However, month-to-month trends of aggregate series are for the most part largely unchanged from those released earlier.

- Preliminary estimates indicate that the seasonally adjusted value of shipments in all Canadian manufacturing industries increased 0.4% to \$21,514.1 million in January from the revised estimate of \$21,433.5 million in December. This increase followed a gain of 0.7% in December. A \$93.2 million increase in electrical and electronic products industries along with small increases in a number of major groups were offset by a \$226.2 million decrease in transportation equipment industries. Durable goods industries shipments remained virtually unchanged at \$10,357.4 million from \$10,361.4 million while shipments of non-durable goods industries were up 0.8% to \$11,156.6 million from \$11,072.1 million.
- Seasonally adjusted, inventories owned by manufacturers at the end of January totalled \$34,313.1 million, down 1.0% from the previous month's revised value of \$34,646.2 million. Total inventories held decreased 0.7% to \$35,439.7 million from \$35,694.8 million, with decreases of 1.8% in finished products and 0.3% in raw materials, while goods in process remained virtually unchanged.
- The ratio of seasonally adjusted total inventory owned to seasonally adjusted shipments declined from 1.62:1 in December to 1.59:1 in January. The ratio of finished products inventory to shipments went from 0.58:1 in December to 0.57:1 in January.
- The value of new orders received in January, seasonally adjusted, increased 0.4% to \$21,645.9 million from the revised December estimate of \$21,569.3 million. In the non-durable goods industries, new orders were valued at \$11,183.9 million, up 1.2% from the revised estimate of \$11,054.0 million in December. New orders of durable goods industries were down 0.5% to \$10,462.0 million from \$10,515.4 million. A decrease of \$166.9 million in transportation equipment industries accounted for most of the decline.

POINTS SAILLANTS

Janvier 1986

Toutes les estimations pour la période de janvier 1982 à janvier 1986 ont désormais comme point de référence le recensement des manufactures de 1982. Quant aux estimations de livraisons, des ajustements ont été faits afin d'inclure les premières données du recensement de 1983. Jusqu'à maintenant, toutes ces estimations étaient basées sur le recensement de 1981.

Ces nouvelles prévisions tiennent compte des mises à jour apportées à la classification, à l'échantillonnage, aux facteurs saisonniers révisés et aux données mensuelles nouvellement incluses. Ainsi donc, ces estimations ne pourront être comparées directement avec les données des communiqués antérieurs. Cependant, les tendances des variations mensuelles des séries agrégées demeurent en grande partie semblables à celles publiées auparavant.

- Après désaisonnalisation, la valeur des livraisons des industries manufacturières canadiennes s'est établie à \$21,514.1 millions en janvier 1986, soit une hausse de 0.4% par rapport à la valeur révisée de \$21,433.5 millions en décembre. Cette hausse suit un gain de 0.7% en décembre. Les biens durables ont demeuré presque inchangé alors qu'ils sont passés de \$10,361.4 millions à \$10,357.4 millions. Ceci est attribuable à gain de \$93.2 millions dans les industries des produits électriques et électroniques ainsi qu'à de petits gains dans plusieurs grands groupes ayant été contrebalancées par une diminution de \$226.2 millions dans les industries du matériel de transport. Les livraisons des biens non durables ont augmenté de 0.8% passant de \$11,072.1 millions à \$11,156.6 millions.
- La valeur désaisonnalisée du total des stocks possédés était de \$34,313.1 millions en janvier, une baisse de 1.0% par rapport à la valeur du mois précédent de \$34,646.2 millions. Pour leur part, les stocks détenus ont diminué de 0.7% à \$35,439.7 millions de \$35,694.8 millions. Des diminutions ont été enregistrées au chapitre des produits finis (- 1.8%) et des matières premières (- 0.3%), tandis que les biens en cours de transformation sont demeurés presque inchangés.
- Le rapport du total des stocks possédés désaisonnalisés aux livraisons désaisonnalisés est passé de 1.62:1 en décembre à 1.59:1 en janvier. Le rapport des produits finis aux livraisons est passé de 0.58:1 à 0.57:1.
- La valeur désaisonnalisée des nouvelles commandes dans l'ensemble des industries manufacturières a été estimée à \$21,645.9 millions, ce qui représente une hausse de 0.4% par rapport au mois précédent qui était de \$21,569.3 millions. Les nouvelles commandes des biens non durables ont atteint \$11,183.9 millions, soit une hausse de 1.2% par rapport à la valeur révisée de décembre (\$11,054.0 millions). Dans les industries des biens durables, la valeur estimative de \$10,462.0 millions était inférieur de 0.5% à la valeur de décembre de \$10,515.4 millions. Cette diminution est principalement attribuable à une baisse de \$166.9 millions dans les industries du matériel de transport.

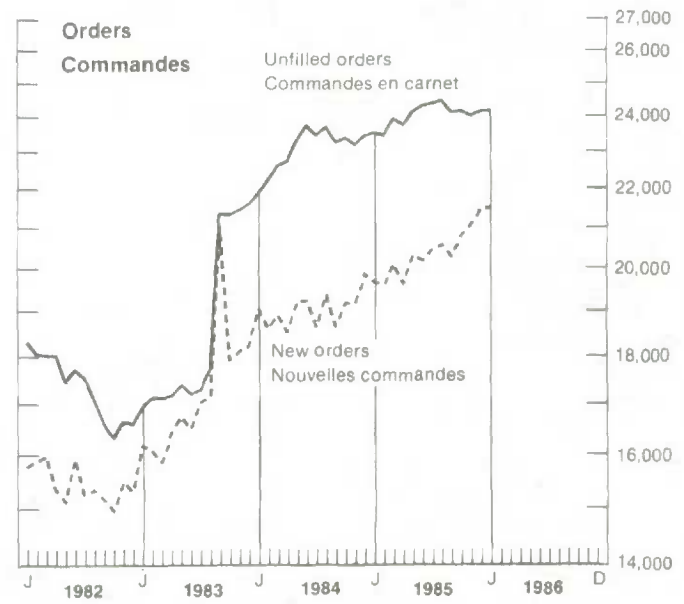

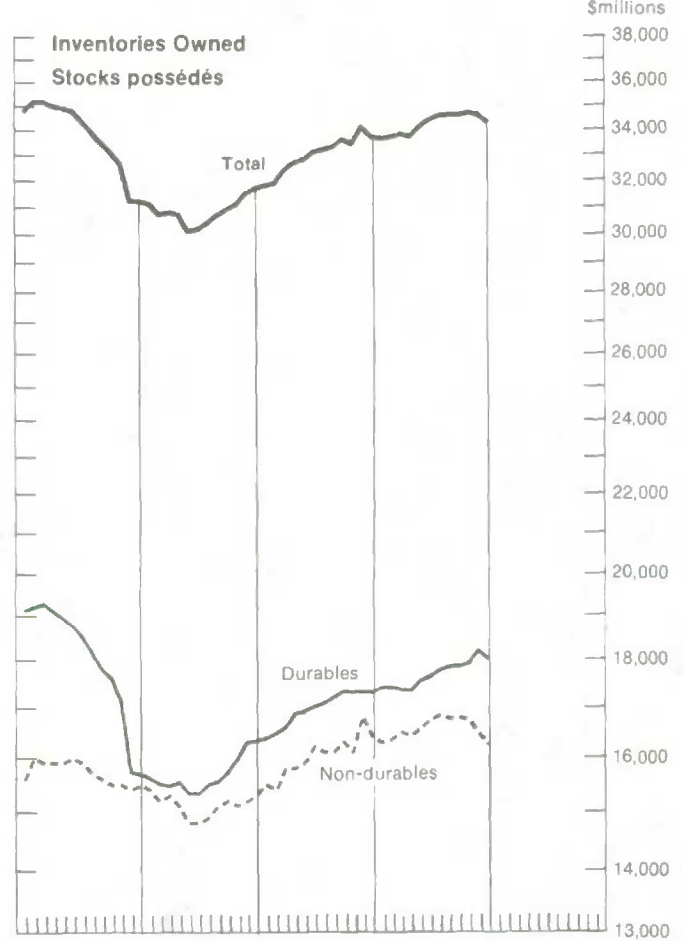

- The seasonally adjusted unfilled orders backlog at the end of January was \$24,282.4 million, up 0.5% from the revised December estimate of \$24,150.6 million. Unfilled orders increased 0.5% in the durable goods industries to \$21,887.3 million from \$21,782.8 million at the end of December. In the non-durable goods industries, unfilled orders were up 1.2% to \$2,395.1 million from \$2,367.8 million.
- Not adjusted for seasonal variation, manufacturers' shipments in January 1986 were estimated at \$20,102.7 million, 1.5% higher than the revised December value of \$19,812.2 million and 9.4% higher than the revised January 1985 value of \$18,380.9 million.
- La valeur estimative des commandes en carnet, après désaisonnalisation s'est établie à \$24,282.4 millions en janvier, une hausse de 0.5% par rapport à la valeur de décembre de \$24,150.6 millions. Les commandes en carnet des biens durables ont augmenté de 0.5% passant de \$21,782.8 millions à \$21,887.3 millions alors que celles des biens non durables ont augmenté de 1.2% à \$2,395.1 millions de \$2,367.8 millions.
- On a estimé à \$20,102.7 millions les livraisons non désaisonnalisées en janvier 1986, ce qui représente une hausse de 1.5% par rapport à la valeur révisée de décembre qui était de \$19,812.2 millions et une hausse de 9.4% par rapport à la valeur de janvier 1985 qui était de \$18,380.9 millions.

FOOTNOTES

Table 1

- (1) Although separate series for the Yukon and the Northwest Territories are not published, their values are included in the Canada total.
- (2) The value for total shipments contains four industries where "production" is used instead of shipments. Please see concepts and methods, 4th paragraph for more details.

Tables 3-4

- (1) Series which contain no significant seasonality, include: raw materials in the petroleum industries in Table 3 and raw materials in the supplementary classification - automotive products industries in Table 4. Therefore, these series are repeated without adjustment in the tables of seasonally adjusted estimates and aggregates of which they are components. Small differences in the unadjusted values, when repeated, may result from rounding techniques.

Table 6

- (1) For this industry, "production" is used instead of shipments. For explanation, please see concepts and methods, 4th paragraph.

Note: Figures may not add due to rounding.

NOTES

Tableau 1

- (1) Même si les séries pour le Yukon et les Territoires du Nord-Ouest ne sont pas publiées elles sont cependant incluses dans le total pour le Canada.
- (2) La valeur des livraisons totales contient quatre industries où la "production" est utilisée au lieu des livraisons. Pour plus de détails, voir le 4^{ème} paragraphe des concepts et méthodes.

Tableaux 3-4

- (1) Les séries qui sont peu sensibles aux variations saisonnières incluent: les matières premières dans l'industrie pétrolière du tableau 3 et les matières premières dans la classification complémentaire-industries connexes de l'automobile du tableau 4. Le tableau de la série désaisonnalisée répète donc les valeurs non corrigées. Les différences minimales entre les séries sont attribuables à la technique d'arrondissement utilisée.

Tableau 6

- (1) Pour cette industrie, la "production" est utilisée au lieu des livraisons. Pour plus de détails, voir le 4^{ème} paragraphe des concepts et méthodes.

Nota: Les chiffres ne totaliseront peut-être pas en raison de l'arrondissement.

CONCEPTS AND METHODS

Estimation Method

Inventories, shipments and orders values in this publication constitute monthly projections of annual census of manufactures values based on returns from a stratified, systematic sample of manufacturing establishments. The data in the January 1985 publication are the first to be published under the 1980 Standard Industrial Classification (SIC). The data in this publication are benchmarked to the 1982 Census with adjustment of 1983 shipments estimates to preliminary census data for that year. Values for years prior to 1982 have been previously benchmarked to the corresponding census data and the aggregate of monthly shipments in those years should correspond with published census values. Because the monthly estimates subsequent to 1982 are projections these totals are subject to adjustment when more recent census data become available. Inventory estimates for December published here, differ from year-end census values to the extent that census totals include individual establishment reports for fiscal years that may end on dates other than December 31. Unfilled orders are published for industries where maintenance of a continuing record of the value of an establishment's backlog of orders is a normal part of the accounting procedure.

The population of manufacturing establishments is divided into groups of large, medium and small establishments according to the value of shipments reported for the census year. Monthly values are sought for all large establishments and a sample is chosen separately for each of the other two size groups. Sample unit values are weighted according to the inverse of their probability of selection. This sample is revised annually in accordance with the census base. To facilitate timely response from company accounting departments, combined reports are accepted from companies with more than one establishment. Estimates of current values are accepted from establishments where the inventory and unfilled orders levels are not measured at the end of each accounting period. There are about 11,000 establishments in the reporting panel.

Inventories

Isolation of component values of inventory by level of fabrication in each industry, where possible, is important for economic studies as well as for derivation of production values. To facilitate this, respondents are asked to report their book values of raw materials, work in process, finished products and progress payments separately. The inventory levels are calculated on a Canada-wide basis, not by province.

Both inventory held and inventory owned, are published. The difference between inventory held and inventory owned, is the value of progress payments received by manufacturers for partially completed items such as aircraft, railroad rolling stocks, ships and structures using fabricated steel. As work proceeds on such items, total inventory values increase until the time of delivery. By deducting the balance of progress payments on manufac-

CONCEPTS ET MÉTHODES

Méthode d'estimation

Les chiffres sur les stocks, les livraisons et les commandes qui figurent dans cette publication sont des projections mensuelles des résultats du recensement annuel des manufactures établies à partir des déclarations d'un échantillon stratifié et systématique d'établissements manufacturiers. Les données que contient la publication de janvier 1985 sont les premières qui soient publiées sous la Classification Type des Industries (C.T.I.) de 1980. Les données que contient la publication sont ajustées en fonction du recensement de 1982 et rectifications aux estimations des livraisons de 1983 par rapport aux données préliminaire de recensement pour cette année. Les chiffres pour les années jusqu'à 1982 inclusivement ont été raccordés aux recensements en cause et la somme des livraisons mensuelles de ces années doit être égale aux résultats de recensements qui ont été publiés. Comme les estimations mensuelles postérieures à 1982 sont des projections, elles pourront être rectifiées lorsqu'on disposera des données de recensement plus récentes. Les estimations sur les stocks publiées dans ce bulletin sont celles de décembre, elles diffèrent donc des chiffres du recensement se rapportant à la fin de l'année dans la mesure où les totaux du recensement comprennent les déclarations de certains établissements pour des années financières qui peuvent prendre fin à d'autres dates qu'au 31 décembre. Les commandes en carnet sont publiées pour les industries où la comptabilité normale prévoit de consigner la valeur des commandes en souffrance des établissements d'une manière suivie.

La population des établissements manufacturiers se divise en trois groupes d'établissements (grands, moyens et petits) suivant la valeur des livraisons déclarées pour l'année de recensement. On demande des déclarations mensuelles à tous les grands établissements et on tire un échantillon séparé pour chacun des deux autres groupes. Les valeurs de l'échantillon sont pondérées en relation inverse de la probabilité qu'elles soient choisies. Cette échantillon est révisé annuellement suivant les résultats du recensement. Dans le but d'aider les services de comptabilité des sociétés à envoyer leurs déclarations à temps, Statistique Canada accepte une déclaration globale pour les sociétés ayant plus d'un établissement et une estimation des chiffres courants pour les établissements dont les stocks et les commandes en carnet ne sont pas recensés à la fin de chaque exercice comptable. On compte environ 11,000 établissements qui produisent des déclarations.

Les stocks

Il est important d'isoler les chiffres des éléments des stocks selon le stage de fabrication dans chaque industrie, lorsque c'est possible, afin de faire des études économiques et des extrapolations des chiffres de production. À cet effet, on demande aux enquêtés de déclarer séparément la valeur comptable de leurs matières premières, de leurs produits en cours, de leurs produits finis et de leurs acomptes à valoir. Les niveaux des stocks sont calculés pour l'ensemble du Canada et non au niveau provincial.

On publie la valeur des stocks détenus et des stocks possédés. La différence entre les deux donne la valeur des acomptes versés par les fabricants sur des produits dont la fabrication n'est qu'en partie achevée comme les avions, le matériel ferroviaire roulant, les bateaux et des constructions qui utilisent des semi-produits en acier. À mesure que la fabrication de ces produits avance, la valeur globale des stocks augmente jusqu'au moment de la livraison. En déduisant le solde des acomptes comptabilisés par les fabricants de

urers' books from total inventory, the value of manufacturers' investment in inventory is derived.

In order to reduce the distortion in the shipments of the four above mentioned industries that would be caused when responding companies finally treat such items of relatively high value as completed sales, a "production" value is used instead of shipments. This production value is derived from adjusting monthly shipments by the monthly change in inventories held (Goods in process held + Finished Products). The raw materials are not included in the calculation since production tries to measure "work done" during the month.

Orders

Most establishments that maintain order books strike a value of unfilled orders at the end of each accounting period. The survey seeks this value which is defined as orders received but not shipped or treated as a sale whether or not work has been done on them or they can be filled from existing stocks. No estimate of this value is made for those industries where orders are customarily filled from stocks on hand and orders books are accordingly not generally maintained.

New orders, a series of considerable economic interest, is a residual value derived from shipments and unfilled orders. All shipments within any month result from an order received either during that month or at some earlier time. New orders are calculated as the sum of total shipments within any month plus the change in the total of unfilled orders from the end of the previous month to the end of the month under review.

Imputation

Values must be imputed for those establishments that have not reported in time for compilation of monthly estimates. This is largely done by mechanical methods which take into account the activity of similar establishments from which reports have been received. Calculation of revised estimates for the immediately prior month in conjunction with preliminary estimates for the current month permits use of values reported too late for the first compilation. When respondents report values for periods earlier than those of the revised current estimates, the responses are used to correct the trends when the series are updated to new census benchmarks.

Revisions

Definitions, classifications and groupings are based on those used by the census of manufactures.

The January 1973 issue of this publication contains a more detailed description of the concepts and survey methods for these series.

l'ensemble des stocks, on obtient la somme investie dans les stocks par les fabricants.

Afin de réduire la distorsion qui surviendrait dans les quatre industries en cause au moment où les sociétés observées considèrent en fin de compte des produits d'une valeur relativement grande comme des ventes achevées, une valeur de "production" est utilisée au lieu des livraisons. Pour arriver à cette valeur de production, il s'agit d'ajuster la valeur mensuelle des livraisons par le changement mensuel dans les inventaires détenus (Produits en cours détenus + Produits finis). Les matières premières ne sont pas inclus dans ce calcul car nous essayons de calculer le "travail fait" durant le mois.

Les commandes

La plupart des établissements qui tiennent des carnets de commandes établissent la valeur des commandes en carnet à la fin de chaque exercice comptable. Lors de l'enquête, nous demandons cette valeur, qui est considérée comme commandes reçues mais non encore expédiées, que des travaux aient été effectués ou non à leur égard, lorsque la commande peut être honorée à partir des stocks existants. Cette valeur n'est pas estimée dans le cas des entreprises qui exécutent habituellement les commandes des réceptions, à partir de leurs stocks et qui par conséquent ne tiennent pas de carnet de commande.

Les séries sur les nouvelles commandes, qui présentent beaucoup d'intérêt du point de vue économique, donnent la valeur résiduelle établie à partir des livraisons et des commandes en carnet. Toutes les livraisons effectuées au cours d'un mois donné résultent d'une commande reçue soit pendant ce mois, soit avant. Les nouvelles commandes sont calculées à partir du total des livraisons au cours d'un mois donné plus la différence entre le total des commandes en carnet à la fin du mois précédent et le total des commandes en carnet à la fin du mois observé.

Imputation

L'imputation des données se fait surtout par des moyens mécaniques qui tiennent compte de l'activité d'établissements semblables qui ont fait parvenir des déclarations. Le calcul des estimations révisées pour le mois précédent et des estimations préliminaires pour le mois observé permet d'utiliser les données déclarées trop tard pour la première compilation. Lorsque les répondants déclarent les chiffres correspondants aux périodes antérieures à celle des estimations révisées actuelles, les réponses servent à corriger les tendances lorsque les séries sont mises à jour d'après les nouvelles données repéré du recensement.

Révisions

Les définitions, les classifications et les groupes sont basés sur ceux du recensement des manufactures.

Le numéro de janvier 1973 de cette publication contient une description plus détaillée des concepts et des méthodes d'enquête de cette série.

Historical Series

Major series published in this issue are stored in CANSIM, the computerized time series data bank of Statistics Canada. All or any part of these series may be purchased on magnetic tape or as computer print-outs. For further information direct inquiries to:

CANSIM,
Application Consulting Section,
Statistics Canada,
Ottawa, Ontario, K1A 0Z8

Seasonal Adjustment

The seasonal adjustment method applied to the series consists of the ratio-to-moving average method in use at Statistics Canada. The X-11 - ARIMA program is used for seasonal adjustment.

Some series containing no significant seasonality or very high irregularity have not been seasonally adjusted. In these cases, unadjusted values are repeated in the tables of seasonally adjusted data. See footnotes for series affected.

Months for Cyclical Dominance

The MCD or months for cyclical dominance values located at the right of the Cansim databank reference number for seasonally adjusted series, indicate the smallest span of months for which the average change in the cyclical factor is greater than that for the irregular factor. For the smoothest series the MCD is one; for the most erratic series, it is twelve. Application of a moving average of the period of the MCD will tend to smooth irregular movements that may obscure the underlying trend-cycle.

The Economic Use Classification (EUC)

The concept of the Economic Use Classification (EUC) consists of combining activities of individual industries at the finest level of aggregation identified by the Standard Industrial Classification (SIC) and bring together, in a general sense, industries whose outputs are directed towards the different types of markets served by industry or, in other words, groups that reflect demand on manufacturing industries by elements of the gross national expenditure.

The present EUC consists of six mutually exclusive groups and a supplementary automotive group. Although the output of an industry may serve a market that spans more than one classification, no attempt is made to subdivide that industry's output into finer detail than that identified by the SIC. Thus the distribution of specific industries to economic uses is determined by the perceived market for the greatest share of the industry's output.

Séries chronologiques

Les séries importantes publiées dans cette livraison sont stockées dans le CANSIM, banque électronique de données sur les séries chronologiques de Statistique Canada. On peut acheter toutes ces séries ou une partie d'entre elles sur bandes magnétiques ou sous forme d'états mécanographiques. Pour tout renseignement complémentaire, s'adresser au:

CANSIM,
Section de consultants aux applications,
Statistique Canada,
Ottawa (Ontario) K1A 0Z8

Désaisonnalisation

On désaisonnalise des séries en calculant le rapport à la moyenne mobile, suivant les méthodes utilisées à Statistique Canada. Il s'agit en l'occurrence du programme normalisé qui sert à appliquer le version X-11 - ARMMI.

Pour quelques séries particulières, il n'y a pas de saisonnalité d'importance, ou il y a trop d'irrégularité. Ces séries n'ont pas été désaisonnalisées. Pour ces cas, les valeurs, sans désaisonnalisation ont été répétées dans les tableaux des séries désaisonnalisées. Voir les notes pour les séries affectées.

Mois de dominance cyclique

Les valeurs de M.D.C. (mois de dominance cyclique) sont situées à la droite du numéro de référence de la Banque de données de "Cansim" pour les séries désaisonnalisées indiquent le plus petit nombre de mois pour lequel la variation moyenne du facteur cyclique est plus grande que celle du facteur d'irrégularité. Le M.D.C. est de un pour les séries les plus régulières et de douze pour les plus fluctuantes. L'application d'une moyenne mobile de la période des M.D.C. aidera à lisser les mouvements irréguliers qui pourraient masquer la tendance cyclique implicite.

Classification des groupes selon l'utilisation économique (CGUE)

Le concept de la classification des groupes selon l'utilisation économique (CGUE) est de combiner les activités des industries à leur plus bas niveau d'agrégation identifié par la classification type des industries (C.T.I.) et de rassembler les industries d'après le marché desservi ou encore, en groupe d'après la demande sur les industries manufacturières par les éléments de la dépense nationale brute.

La CGUE comprend six groupes mutuellement exclusifs et une classification complémentaire des industries connexes de l'automobile. Bien que la production d'une industrie peut servir plus d'un marché, aucun effort est fait pour subdiviser la production de cette industrie dans plus de détail que fournit par la C.T.I. Donc, la distribution d'industries spécifiques à un groupe économique se fait entièrement vers le marché qui est perçu comme étant le plus important pour l'industrie en question.
