NEW MANUFACTURING ESTABLISHMENTS IN CANADA

This memorandum revises and brings up to date a previous issue published in December 1958. It contains the names, addresses and principal products manufactured by new establishments which have come into operation recently, or report that they expect to be in operation in the near future. To enable the examination of new entrants in a particular field or area, the firm names have been arranged by industry and by provinces within each industrial group. Revised issues of this memorandum will be published every six months.

The listing comprises the names of entirely new firms that have not been in business before, as well as new branch plants of existing businesses, all of which have indicated that they operate in the manufacturing field. Branch sales offices and separate new warehousing facilities are excluded. Change of ownership does not constitute a new firm as it is essentially the same business even though it may operate under a new name.

The industrial classification follows the concepts of the Standard Industrial Classification except that, in most cases, where the activity is essentially repair in nature, the establishments are not classified as manufacturers. Dressmakers and businesses engaged in welding and repairs to electrical goods which were included in previous memoranda have now been deleted. Those engaged in re-upholstering, furniture refinishing and electroplating and other metal finishing are, however, considered as manufacturing by the Census of Industry and are, therefore, included as such in this memorandum. An establishment reporting as operating in more than one manufacturing field is classified in that sector where the major part of its operations are conducted.

The information contained in this memorandum should be qualified in view of the fact that there has been no evidence to show whether or not the new firms are in actual production. It has been reported that for every firm listed, production has recently started or that it is expected to start in the near future but this cannot be considered as solid information until such time as data are collected in the annual Census of Industry, covering the details of the manufacturing operations.

The names listed cover establishments which have come to the attention of the Bureau since the last published annual report for each industry. Since the previous memorandum was prepared, 1,125 new names have been added as a result of information received. The names of those establishments appearing for the first time are preceded by an asterisk(*). During this same period, 1,158 names which appeared in the memorandum dated December, 1958, have been dropped from the listings. Of those deleted, 889 were firms now included in Industry and Merchandising annual reports, 12 were duplications because of change in the firm name, further contact revealed that 101 were out of business and 116 were not manufacturers as originally reported, and the remainder, 40, were discarded for various other reasons. With annual reports being issued throughout the year, it is impossible to avoid some duplication of firm names in this memorandum and certain of the annual reports of the Industry and Merchandising

.....

Division. This, however, has been kept to a minimum.

All new establishments, irrespective of size, are included in this memorandum if they report as being operators in the manufacturing field. In cases where a firm is in the organizational stage when contact is made and information relating to the nature and scope of operations to be conducted is secured through solicitors, the establishments are excluded until such time as a permanent business address is established. This procedure is followed as many new businesses apply for letters patent to protect a firm or trade name, with actual operations commencing at some considerable time after this action has been taken.

The information given in this memorandum is limited to that permitted by the Statistics Act, Statutes of Canada, 1953, Chapter 45, which authorizes the Dominion Bureau of Statistics to issue "an index or list of particulars taken from individual returns, of the names and locations of individual firms or businesses, of types of products produced, manufactured or dealt with by individual firms or businesses, but no such list or index shall otherwise reveal any of the particulars comprised in any individual return".

June 30, 1959.

New Manufacturing Establishments, 1950-1958

The following material presents in tabular form the number of manufacturing establishments reporting for the first time in the annual Census of Manufactures in each year from 1950 to 1957 and which are still active in the manufacturing field. Data for the year 1958 are the result of a continuous survey of prospective new firms and include those establishments which have reported that manufacturing operations commenced during that year. This, however, is subject to revision when the establishments concerned have reported in the annual Census of Manufactures and more solid information is available.

During the period 1950 to 1958 there were 17,488 manufacturing establishments which started operations and which are still active. The number of new entrants increased steadily from 1950, reaching a peak in the years 1955 and 1956, following which there was a marked decline (Table 1). This trend was followed in all industries with the exception of the Iron and Steel Products Industry where the peak was maintained through the years 1955 to 1957 and the decline in 1958 was less severe.

Throughout the period under review the Wood Products Industry accounted for 33.6 per cent of the total number of new establishments, the Foods and Beverages, the Iron and Steel Products and the Clothing Industries together accounted for an additional 35.5 per cent and the Miscellaneous Manufacturing and the Printing and Publishing Industries, slightly more than 6.0 per cent each.

Provincial distribution (Table 2) shows the heaviest concentration of new manufacturing establishments in Quebec and Ontario, which together accounted for more than 30 per cent of the total, followed by British Columbia and Alberta where 17 and 7 per cent respectively of the new businesses located. This overall pattern is paralleled in nearly all industries, the most notable exception being in the Wood Products Industry where the heaviest concentration was in the two western provinces. In this industry the number of new establishments in British Columbia was as great as the number located in Ontario and Quebec together.

Breakdown by country of origin (Tables 4 and 5) reveals that 818 new establishments originated outside Canada. Those with affiliation or control in the United States numbered 651, accounting for almost 80 per cent of the total number with foreign origin. The greatest part of this group operated in the Iron and Steel Industry followed by the Chemical Products and the Electrical Apparatus and Supplies Industries. The greatest number of new establishments originating in Canada were firms active in the Wood Products and the Foods and Beverages Industries, where domestic raw materials are readily available. Distribution of the new establishments with foreign origin by provincial location, results in the same pattern as the overall picture, with the heaviest concentration in Ontario and Quebec followed by British Columbia and Alberta.

Table 1 - Number of New Manufacturing Establishments, by Year, 1950-1958
