THE MANUFACTURING INDUSTRIES OF CANADA

Section A

SUMMARY FOR CANADA

1954

Published by Authority of
The Right Honourable C. D. Howe, Minister of Trade and Commerce

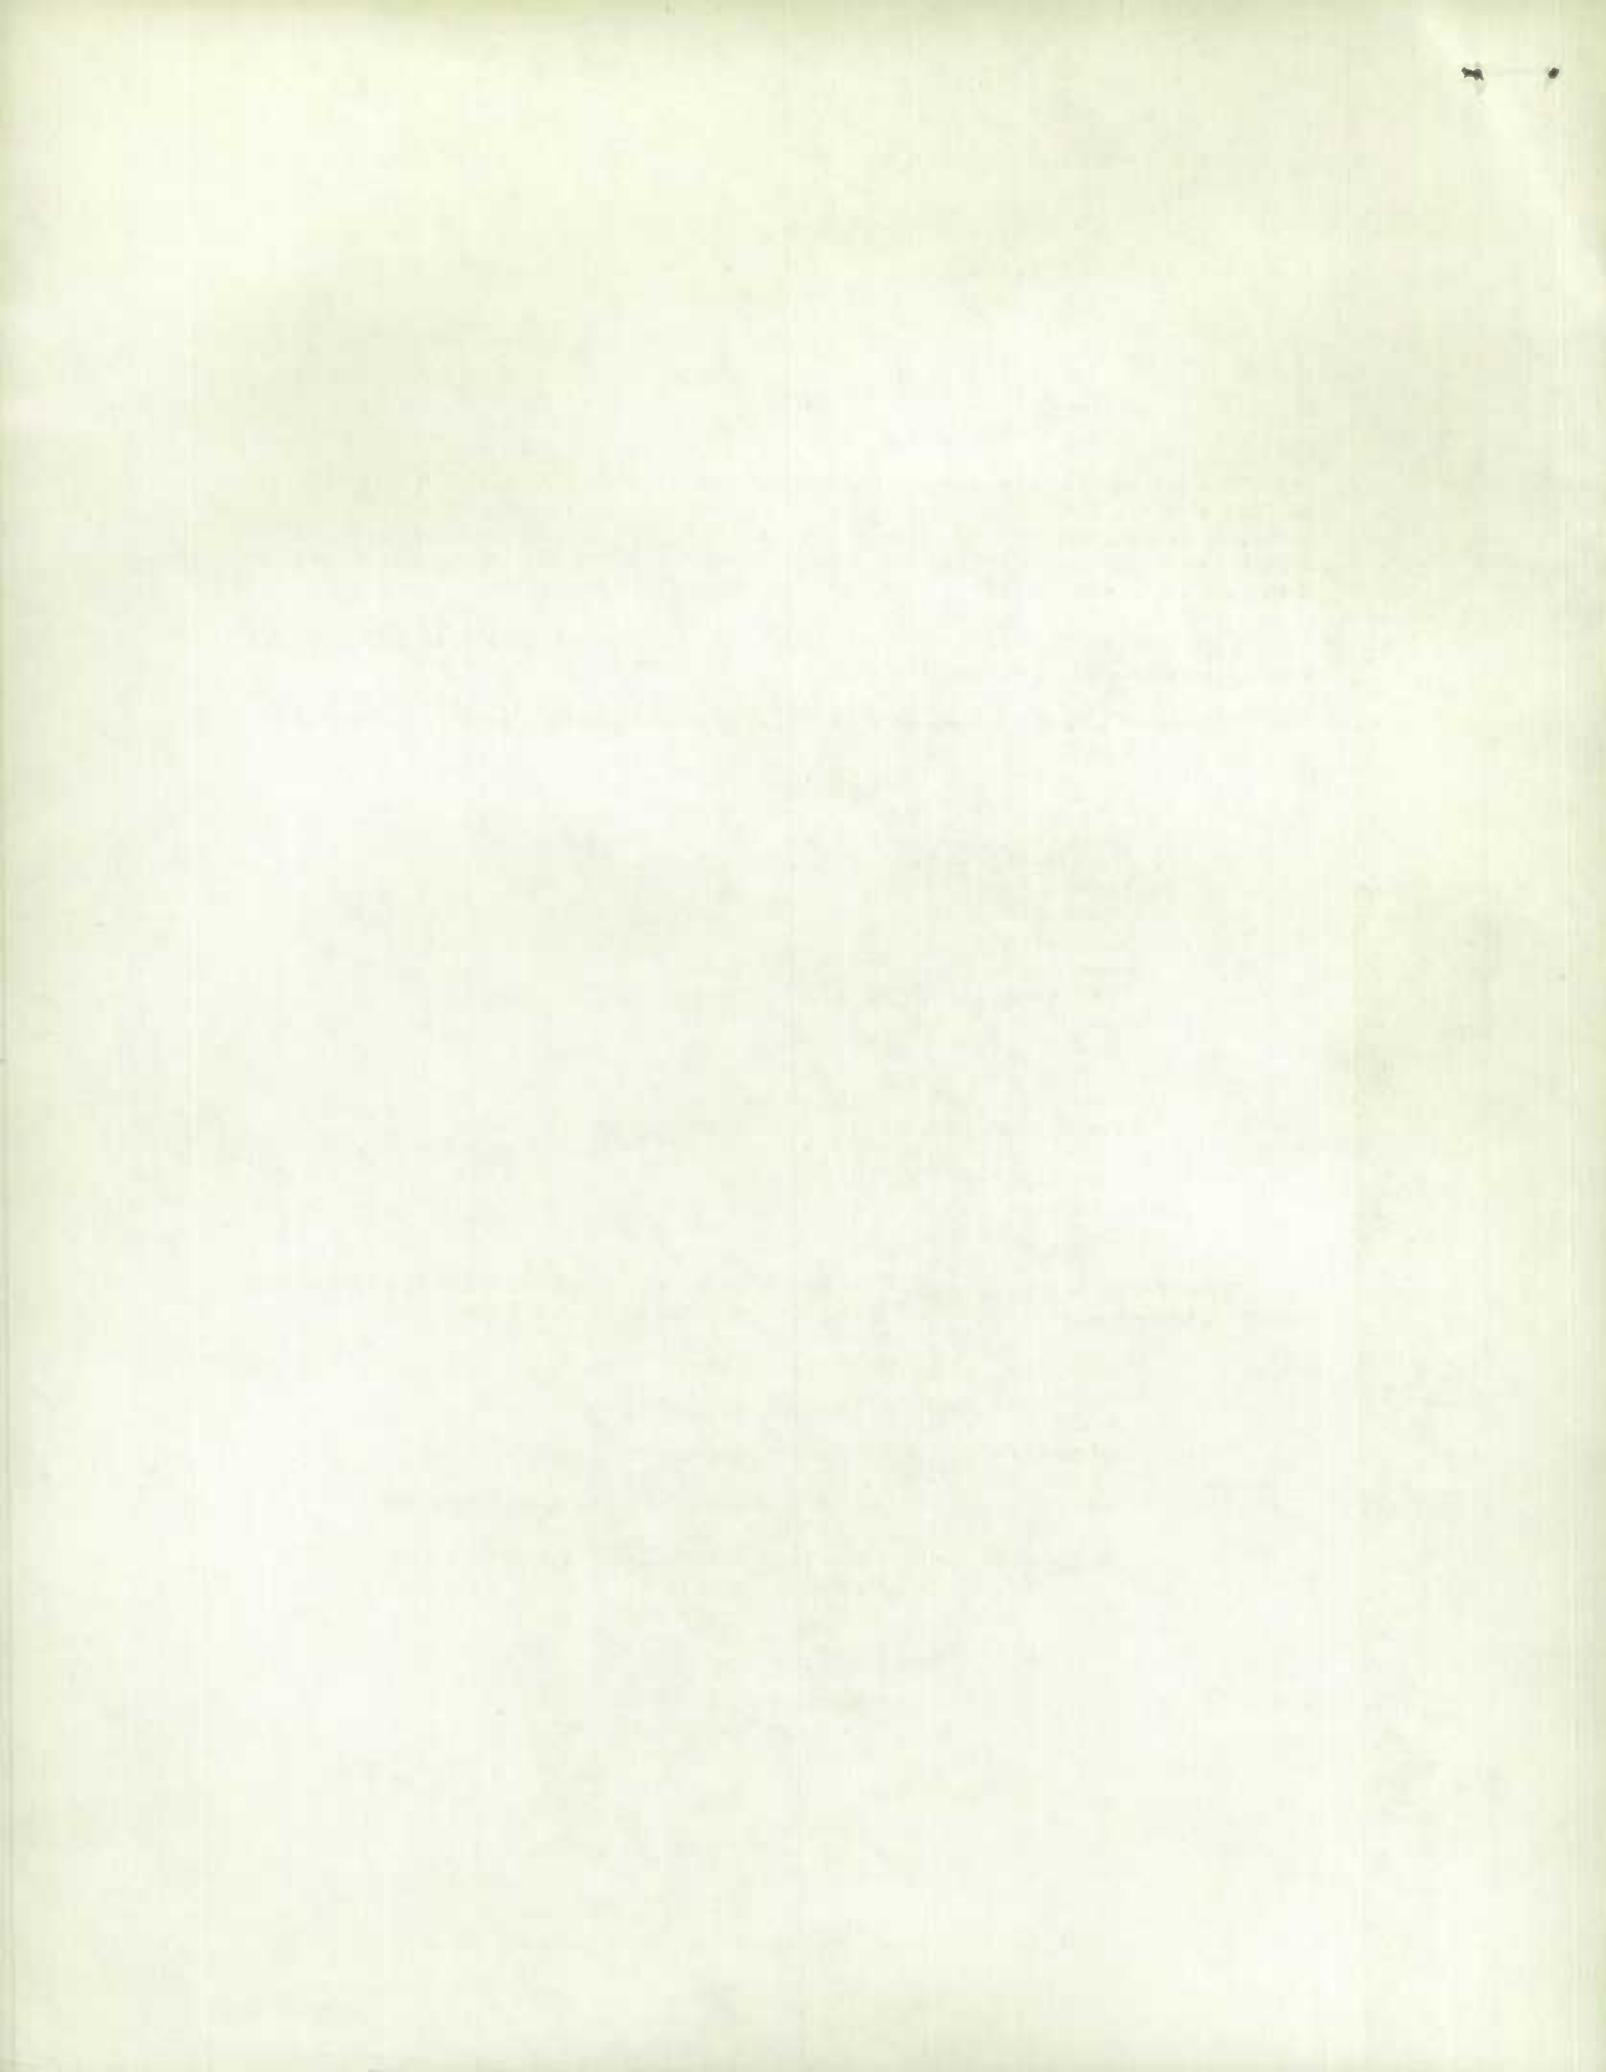

DOMINION BUREAU OF STATISTICS
Industry and Merchandising Division
Central Assembly and Index Section

5001-5001-104

Price 25 cents

Vol. 2—Part II—Section A

EDWARD CLOUTIER, C.M.G., O.A., D.S.P., Queen's Printer and Controller of Stationery, Ottawa, 1956.

NOTICE

The annual reports prepared by the Industry and Merchandising Division of the Bureau of Statistics are divided into 3 volumes as follows: Volume I — The Primary Industries, including mining, forestry and fishing; Volume II — Manufacturing; Volume III — Merchandising and Services. The volumes are made up of parts, and the parts in turn are subdivided according to the industries or provinces which they comprise.

Volume II consists of the following parts, the first two of which deal with manufacturing as a whole and the balance with the major manufacturing groups:

- I—General Review of the Manufacturing Industries, \$1.50
- II—The Manufacturing Industries of Canada,
(7 sections, see below:)
- III—Foods and beverages
- IV—Tobacco and tobacco products
- V—Rubber products
- VI—Leather products
- VII—Textile mills
- VIII—Knitting mills
- IX—Clothing
- X—Wood and paper products
- XI—Printing trades
- XII—Iron and steel products
- XIII—Transportation equipment
- XIV—Non-ferrous metal products
- XV—Electrical apparatus and supplies
- XVI—Non-metallic mineral products
- XVII—Products of petroleum and coal
- XVIII—Chemicals and allied products
- XIX—Miscellaneous manufactures

The present report belongs in Part II. It is punched to permit filing in a ring binder along with other reports of the group, the full list of which is as follows:

- Section A. Summary for Canada, 25¢
- Section B. Atlantic Provinces, 25¢
- Section C. Province of Quebec, 25¢
- Section D. Province of Ontario, 25¢
- Section E. Prairie Provinces, 25¢
- Section F. Province of British Columbia, including Yukon and Northwest Territories, 25¢
- Section G. The Manufacturing Industries of Canada,
Regional Distribution, 75¢

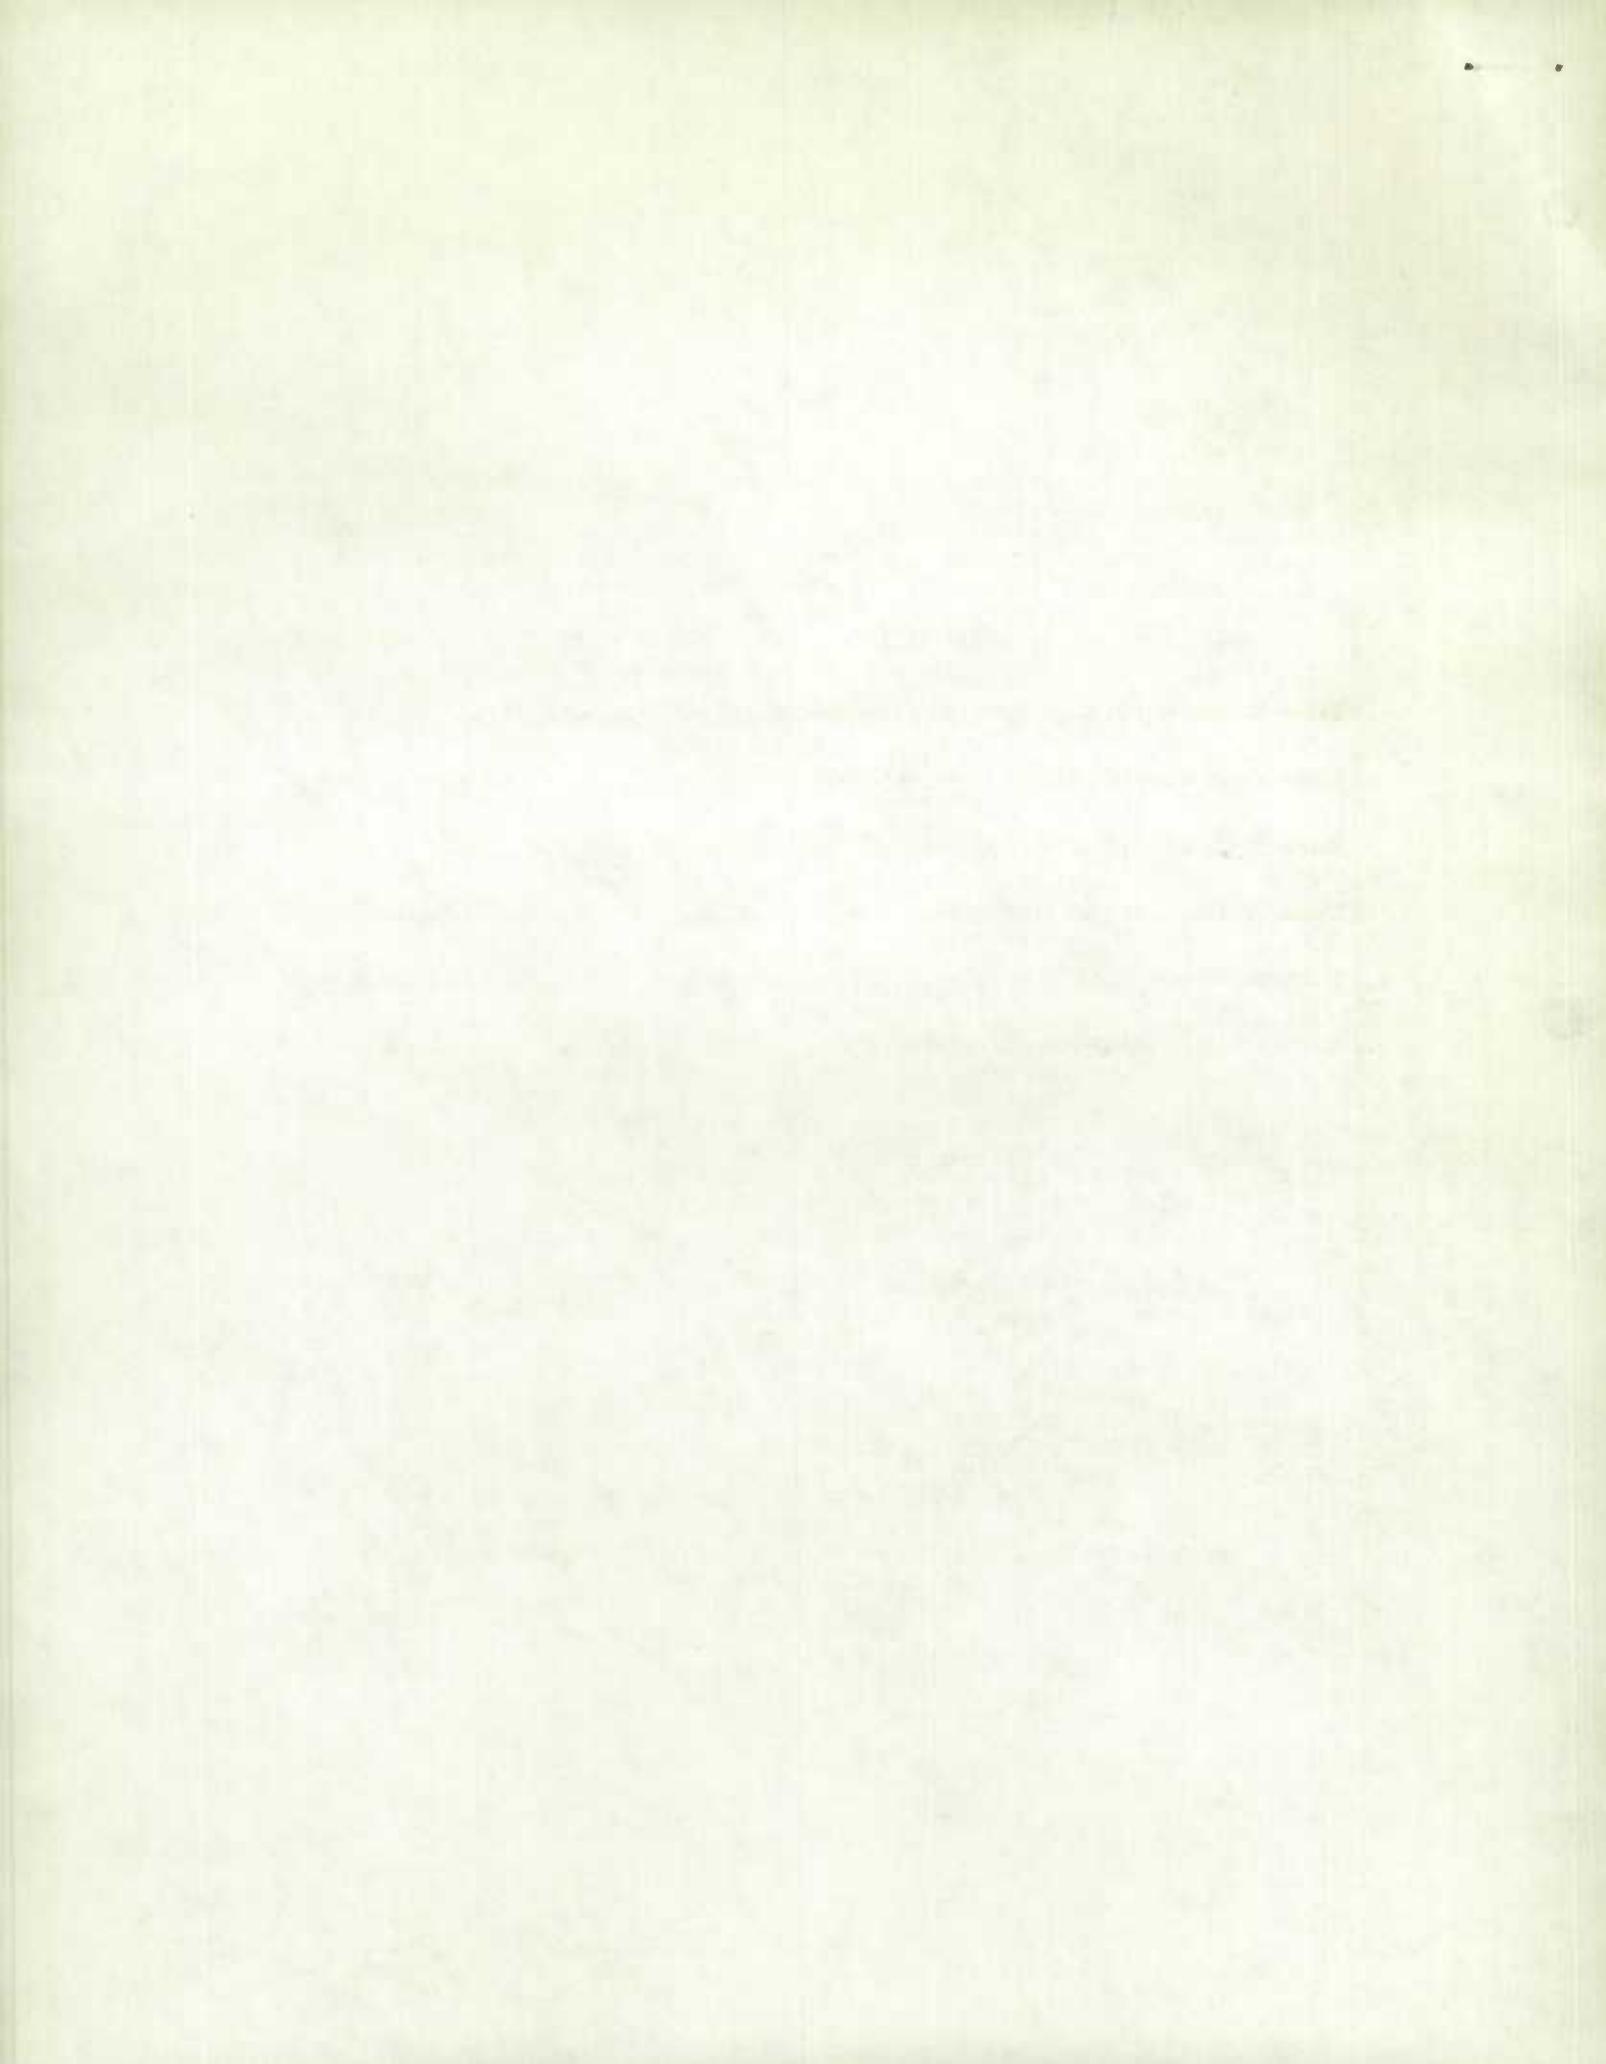

TABLE OF CONTENTS

Table 2. Principal Statistics compared, 1953 and 1954	10
Table 3. Principal Statistics of the Forty Leading Industries, 1954	11
Table 4. Principal Statistics by Provinces, 1953 and 1954.....	12
Table 5. Principal Statistics by Industrial Groups, 1953 and 1954	14
Table 6. Principal Statistics of the Individual Industries, 1954.....	16

THE MANUFACTURING INDUSTRIES OF CANADA

SECTION A

SUMMARY FOR CANADA

1954

The manufacturing industries of Canada experienced a downward adjustment during 1954. Both value of shipments and employment were moderately lower than in 1953 which was a peak year. Shipments at \$17,554,527,504 were 1.3 p.c. lower. This was accompanied by an increase of 3.0 p.c. in finished goods inventory which rose to \$890,730,831 from \$864,602,911 the previous year, thus indicating a smaller decrease in production than in shipments. The decline in employment was sharper, dropping to 1,267,966 persons or 4.5 p.c. However, due to increases in hourly earnings, the amount paid in salaries and wages, amounting to \$3,896,687,691 was only 1.5 p.c. lower. In physical output the trend was also downward with a decline of 4.4 p.c. for manufacturing as a whole. Non-durable goods were 1.1 p.c. lower while durable goods with a drop of 8.1 p.c. were the most severely affected. The greatest decline in volume output was reported by the transportation equipment group with a decrease of 18.7 p.c., textiles 14.2 p.c., iron and steel products 13.4 p.c., and clothing including knitting mills 13.1 p.c. A few other groups had moderate declines of 2 to 6 per cent. The picture was not completely dark; there were a few bright spots too. Such groups as foods, paper products, printing and publishing, products of petroleum and coal, non-ferrous metal products, and non-metallic mineral products reported increases of 1 to 5 per cent, while chemicals and allied products remained practically unchanged.

The industrial expansion of Canada since Confederation has been phenomenal. In the past generation alone, Canada has changed from a country producing and exporting mainly primary products to a country that is increasingly producing and exporting manufactured products, until to-day manufactures account for about 30 p.c. of the value of all goods and services produced, and also rank as the leading employer of labour in Canada.

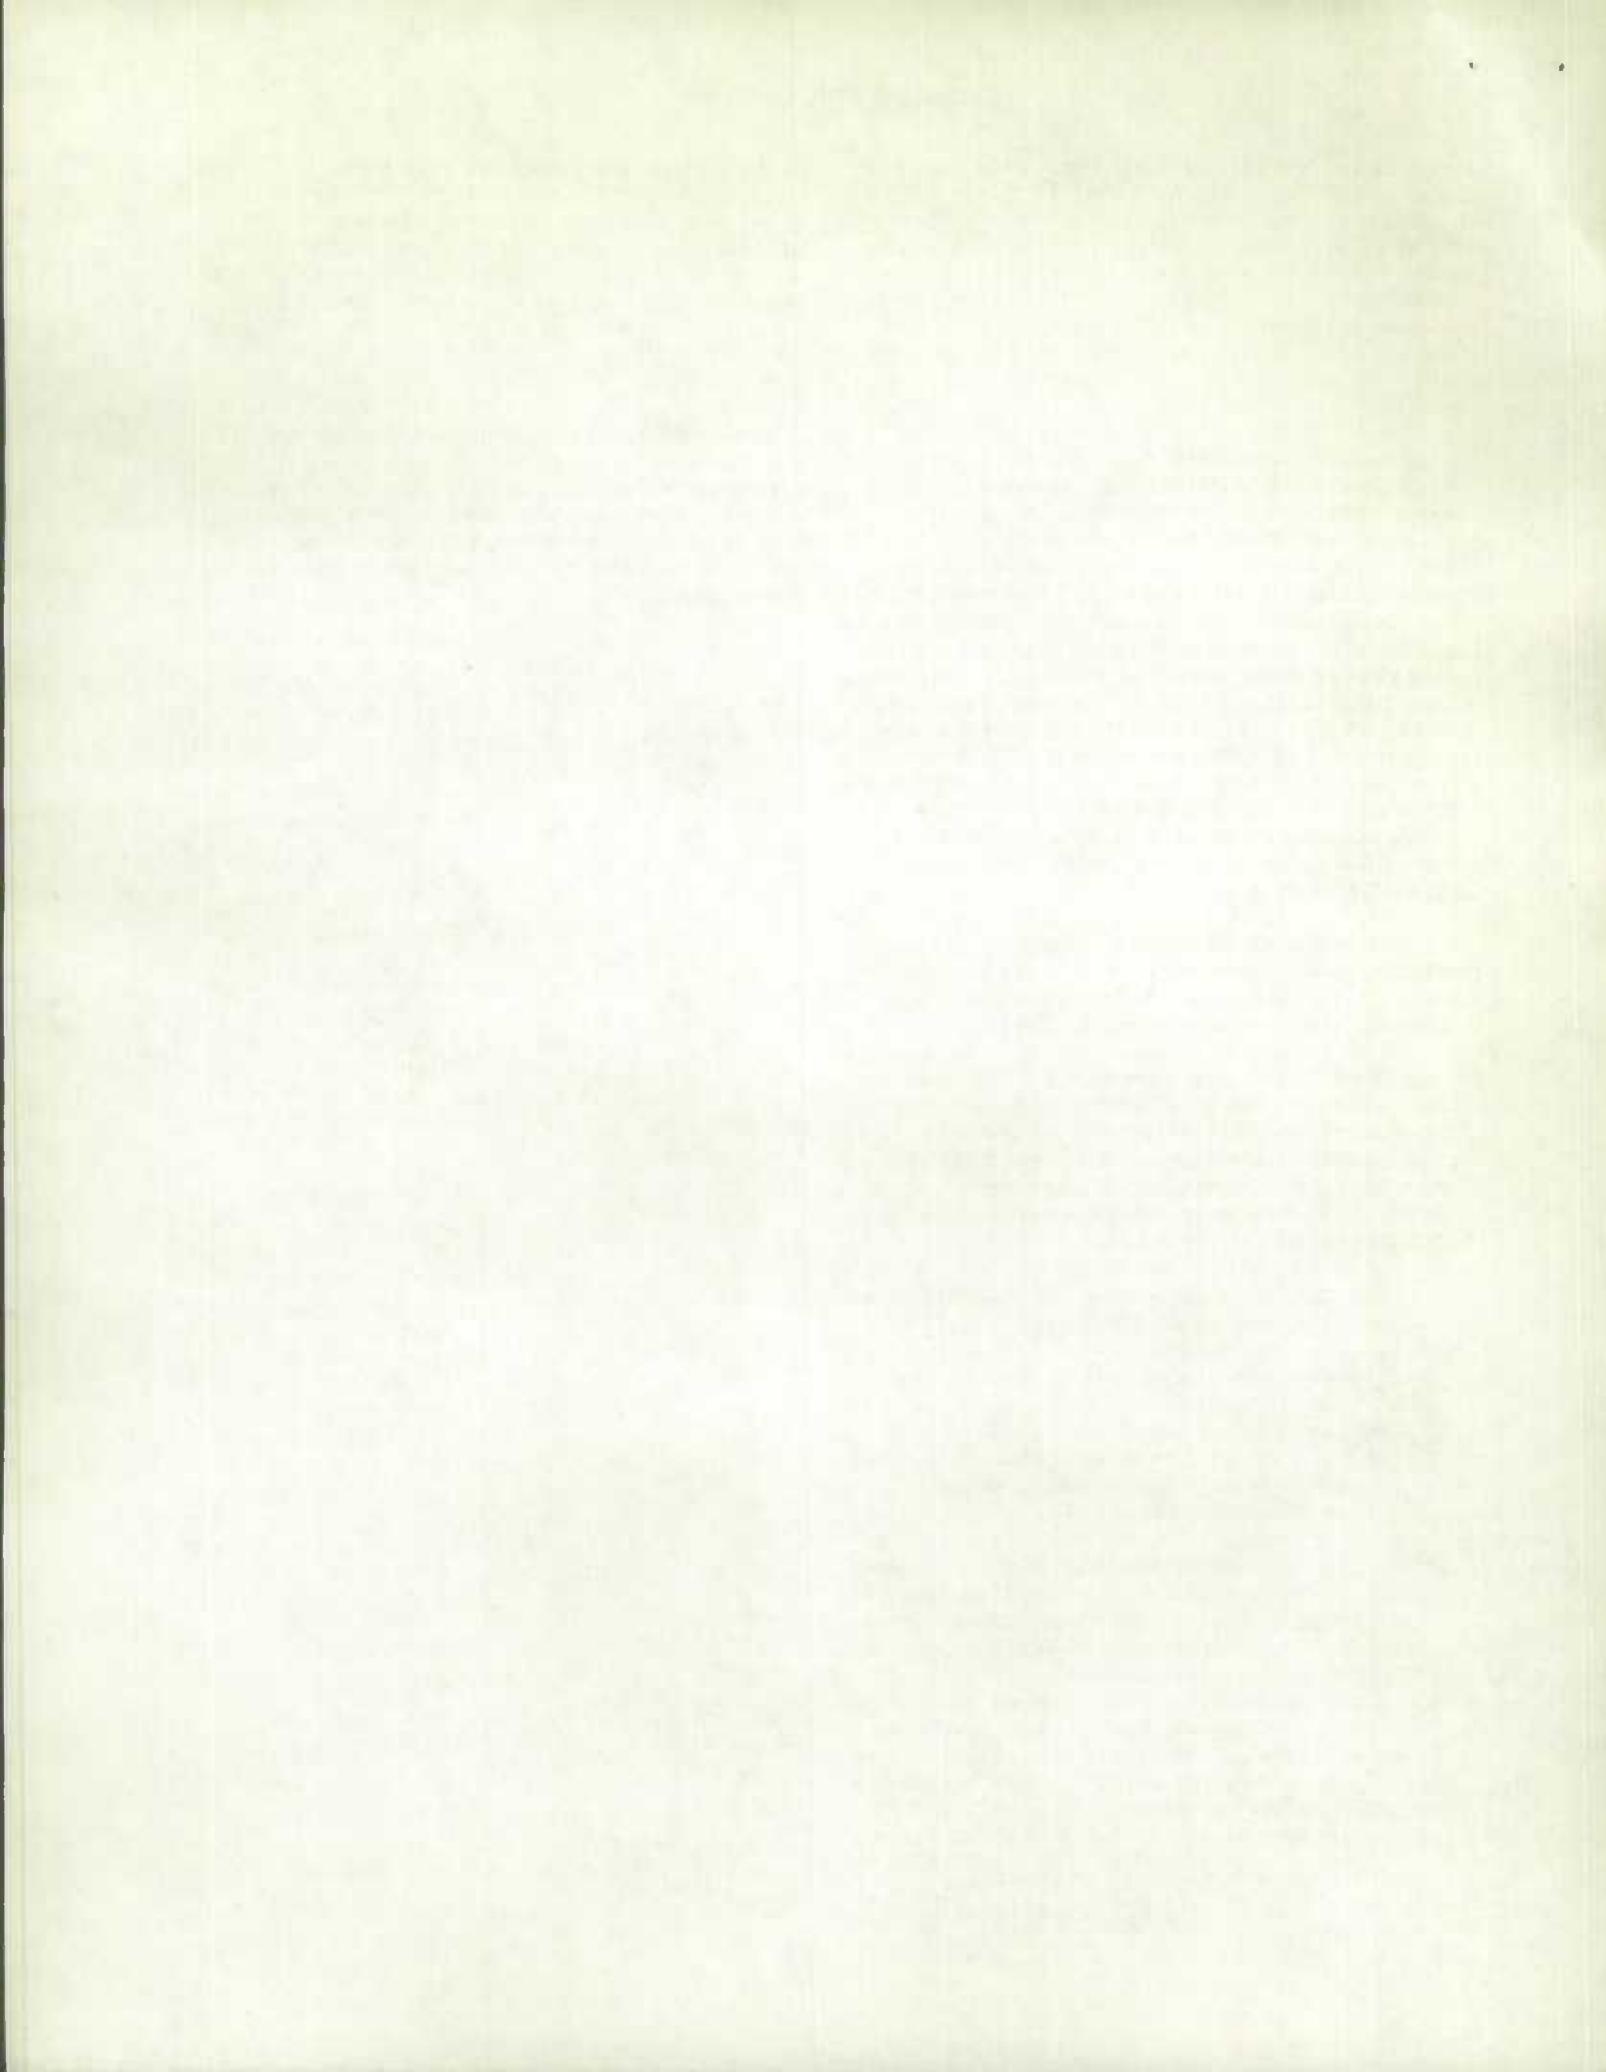

Canada is no longer on the fringes of industrialization but ranks among the world's most important manufacturing countries. Basic historical developments, such as the opening of the West and the magnitude of requirements of all kinds for World Wars I and II, have been followed by recent discoveries of far-reaching significance. Such events as the discovery of a major oil pool on the prairies in 1947, the discovery of large-scale deposits of iron and the successful search for uranium have given new dimensions to Canadian thinking and business planning. These are the factors that explain the records of capital expenditures year by year since the end of the War. Yet it is not the mere

rate of expansion that is significant. There have been other periods when Canada's population has grown more rapidly and in many respects the rate of industrial expansion in the late 1920's was relatively as great as in the post-war years. The real significance of the latter period is that never before has there been an advance on such a broad industrial front.

The second point to be observed is the changing emphasis of Canadian manufacturing activity. By 1949 the period of post-war conversion was passed and Canada had entered a new phase of economic expansion which derived its dynamic from the discovery of new resources and the application of new processes. This meant that even the sharp recession in the United States in the year 1949 failed to have significant effects in Canada. The influence of Korea and the consequent rearmament program gave an added impetus to the expansion of Canadian industry and to the development of Canadian basic resources. Capital expenditures that contributed most to the defence of Canada were given priority. Additional capacity was created to meet requirements of the specialized defence program—aircraft, electronic equipment, ships and guns—many items of which had never before been produced in Canada. Measures such as steel control, credit regulations and deferred depreciation had the desired effect. A shift gradually took place toward the further expansion of basic industrial capacity and away from investment in consumer goods and services.

The stability of current levels of manufacturing is indicated by the fact that such activity is the result of business assessments of resources and market potentialities. Millions of dollars are being invested in oil because the prairies can produce oil as economically as other great fields on the North American Continent. Petro-chemical plants are being erected because the raw materials are readily at hand. Kitimat is based on the coincidence of abundant and cheap hydro-power and access to ocean transportation, both of which are essential to the low-cost production of aluminum. The exploitation of the Ungava iron deposits rests on the belief that the steel industry of the North American Continent will need the high-grade ores involved in order to meet continuing peace-time demands. No country is in a more favourable position than Canada to supply uranium for the production of atomic energy.

Of strategic importance, and probably of even greater long-term significance to the Canadian

SUMMARY FOR CANADA

economy, has been the growing world-wide shortage of raw materials; a shortage born of rising levels of employment and income, and accentuated by the course of international events, especially since 1950. These demands have shown few signs of abating and they have led to substantial increases in Canadian primary manufacturing capacity, particularly in so far as the light metals, nickel, chemical fertilizers and the cheaper grades of paper are concerned.

In recent years the demands stemming from population growth and a rising standard of living have been noticeable at all levels. In food processing, a steady up-grading in the quality of foods sold on the domestic market has been even more important than population growth. The two together have almost doubled the dollar sales of processed foods in this country since 1945. And at the intermediate level other important changes have taken place. Many of Canada's new chemical plants, for example, have been built with the domestic consumer market in mind. Frequently using petroleum or natural gas as a source of raw material, they have gone a long way towards making Canada independent of imports in such categories as vanillin, nylon and rayon intermediates, and plastics for packaging and similar uses.

As mentioned above, the physical volume of production in 1954 was down 4.4 p.c., with the durable goods industries reporting a drop of 8.1 p.c. and non-durable goods 1.1 p.c.

In the durable goods sector only two groups out of seven reported increases in volume of production. These two were: non-metallic mineral products with an increase of 2.6 p.c. and non-ferrous metal products with 1.4 p.c. Reflected in these increases is the rise in production of aluminum from 548,445 to 557,897 tons, nickel from 143,643 to 166,299 tons and cement from 22,238,335 to 22,437,477 barrels.

The largest decline of 18.7 p.c. was reported by the transportation equipment group. This was reflected in the drop of motor vehicle production which declined from 486,049 units in 1953 to 352,109 units in 1954, as well as a drop in the value of automobiles and parts exported which fell from \$75,318,523 in 1953 to \$27,102,946 in 1954. The next highest decline of 13.4 p.c. was reported by the iron and steel group. The output of pig iron in 1954 at 2,211,029 tons was 29.9 p.c. lower than in the previous year, while steel ingots at 3,195,030 was 22.4 p.c. lower. The output of the wood products group which was 2.1 p.c. lower is accounted for mainly by lower exports of wood products. Exports of planks and boards declined by 16.6 p.c., veneers and plywoods 11.8 p.c. and shingles 10.0 p.c. The electrical apparatus and supplies group, in spite of an increase in the production of television sets from 391,974 to 611,206 units, reported a decline of 1.8 p.c. in volume. The miscellaneous industries group dropped 4.7 p.c.

In the non-durable goods sector the trend was mixed. Six groups of industries reported increases

while five groups reported declines. Of the groups reporting lowered volume of production, the textile group was the most severely affected with a drop of 14.2 p.c. Next in severity was clothing with a 13.1 p.c. decline. Other groups showing declines were: leather products 5.9 p.c., rubber products 4.4 p.c. and beverages 2.4 p.c.

Of the groups reporting increased volume, the printing and publishing group led with 4.9 p.c. This was followed by paper products with 4.0 p.c., products of petroleum and coal 3.9 p.c., tobacco products 3.6 p.c., foods 2.1 p.c. and chemical products .2 p.c. The table on page 7 shows the percentage variation of the major groups of the Standard Industrial Classification.

Manufacturing establishments reporting in 1954 numbered 38,028. Of these 790 were located in Newfoundland, 209 in Prince Edward Island, 1,526 in Nova Scotia, 1,057 in New Brunswick, 12,191 in Quebec, 13,178 in Ontario, 1,522 in Manitoba, 1,010 in Saskatchewan, 2,052 in Alberta, 4,462 in British Columbia, and 31 in the Yukon and Northwest Territories. These plants furnished employment to 1,267,966 persons who received \$3,896,687,691 in salaries and wages. They also shipped goods with a selling value at the factory of \$17,554,527,504 and spent \$9,241,857,554 for materials, while the value added by manufacture totalled \$7,902,124,137. The value added is obtained by subtracting the cost of materials, including fuel and electricity, from the gross value of products. The difference represents the value added to the materials by labour. It is this difference which the employer of labour uses to pay for the labour itself, the overhead expenses, interest and profits.

To calculate the value of production, it is necessary to adjust the value of shipments for the difference in the opening and closing inventories of finished goods. As the census of industry schedules for 1952 and 1953 did not contain data on opening and closing inventories, no calculation can be made directly for value of production. For these two years, therefore, the value added is obtained by subtracting from the shipments the cost of materials, including fuel and electricity. The value thus obtained is somewhat different to the actual value. Beginning with 1954 it will again be possible to obtain value of production figures, by adding to the value of shipments the changes in the inventory of finished products. The figures for value added in 1954 are, therefore, comparable with 1951 and prior years.

The value added by manufacture in 1954 for manufacturing as a whole is \$7,902,124,137. This is about \$12,000,000 lower than the results obtained when the conversion formula of shipments to value of production is used. This is due to the fact that in a few industries value of production figures are still being collected, while the total figures of inventory change also include the inventory of these industries.

Variation in Volume of Production

Group	Volume Index		Percentage Variation
	1953	1954	
All manufactures.....	263.0	251.4	- 4.4
Non-durable goods	224.1	221.7	- 1.1
Durable goods	323.9	297.7	- 8.1
Non-durable goods:			
Foods	194.0	198.1	+ 2.1
Beverages	336.6	328.6	- 2.4
Tobacco and tobacco products	269.6	279.3	+ 3.6
Rubber and rubber products	264.2	252.6	- 4.4
Leather products	136.7	128.6	- 5.9
Textiles	187.6	161.0	- 14.2
Clothing, including knitting mills	167.3	145.4	- 13.1
Paper products	244.7	254.4	+ 4.0
Printing, publishing and allied industries	204.8	214.8	+ 4.9
Products of petroleum and coal	324.3	336.9	+ 3.9
Chemicals and allied products	284.4	285.0	+ 0.2
Durable goods:			
Wood products	235.3	230.3	- 2.1
Iron and steel products	290.8	251.8	- 13.4
Transportation equipment	436.3	354.9	- 18.7
Non-ferrous metal products	243.3	246.7	+ 1.4
Electrical apparatus and supplies	486.7	477.8	- 1.8
Non-metallic mineral products	399.0	409.5	+ 2.6
Miscellaneous industries.....	322.6	307.5	- 4.7

SUMMARY FOR CANADA

Percentage variation of manufacturing in Canada, by Provinces and Groups, 1954 compared with 1953

Province and group	1954 compared with 1953		
	Number of employees	Earnings	Selling value of factory shipments
Canada	- 4.5	- 1.5	- 1.3
Newfoundland	- 6.5	+ 13.1	+ 2.9
Prince Edward Island.....	- 1.9	- 3.1	+ 1.2
Nova Scotia	- 7.6	- 6.1	- 6.2
New Brunswick	- 9.7	- 7.8	- 2.8
Quebec	- 4.0	- 0.9	+ 0.2
Ontario	- 5.6	- 3.1	- 3.9
Manitoba.....	- 5.8	- 3.9	- 2.3
Saskatchewan	- 0.7	+ 3.4	+ 5.3
Alberta	- 1.0	+ 4.6	+ 3.5

1952 ⁵	37,929	"	1,288,382	3,637,620,160	9,146,172,494	7,443,533,199	16,982,687,035
1953 ⁵	38,107	"	1,327,451	3,957,018,343	9,380,558,682	7,993,069,351	17,735,416,854
1954 ⁵	38,028	"	1,267,966	3,896,687,691	9,241,857,554	7,902,124,137	17,554,527,504

1. Years 1924-1951, inclusive, the value added by manufacture is computed by subtracting the cost of fuel, electricity and materials from the gross value of products. Years 1952 and 1953 the deduction is made from value of factory shipments and in 1954 from the calculated value of production. Figures prior to 1924 are not comparable since statistics for cost of electricity are not available. See text p. 6, last three paragraphs.

2. In 1952 and subsequent years the basis of collection is "Value of factory shipments" instead of "Gross value of products."

3. A change in the method of computing the number of wage-earners in the years, 1925 to 1930, inclusive, increased the number somewhat over that which the method otherwise used would have given. In 1931, however, the method in force prior to 1925 was re-adopted.

4. Includes Newfoundland with the exception of fish processing.

5. Fish processing in Newfoundland included.

TABLE 2. Principal Statistics Compared, Canada, 1953 and 1954

Principal statistics		1953	1954	+ Increase - Decrease
Establishments	No.	38,107	38,028	- 79
Supervisory and office employees:				
Male	No.	195,843	199,763	+ 3,920
Female	"	78,382	79,173	+ 791
Earnings	\$	1,016,679,409	1,075,101,215	+ 58,421,806
Average	"	3,707	3,854	+ 147
Production workers:				
Male	No.	828,363	779,955	- 48,408
Female	"	224,863	209,075	- 15,788
Earnings	\$	2,940,338,939	2,821,586,476	- 118,752,463
Average	"	2,792	2,353	+ 61
Cost at plant of materials used	"	9,380,558,682	9,241,857,554	- 138,701,128
Average per establishment	"	246,151	243,028	- 3,123
Cost of fuel and electricity	"	411,788,821	424,432,228	+ 12,643,407
Value added by manufacture ¹	"	7,993,069,351	7,902,124,137	- 90,945,214
Average per establishment	"	209,742	207,798	- 1,944
Selling value of factory shipments	"	17,785,416,854	17,554,527,504	- 230,889,350
Average per establishment	"	466,698	461,621	- 5,077

1. In 1954 cost of materials, fuel and electricity is deducted from the calculated production² instead of from the selling value of factory shipments as in 1953. The figures for these two years are, therefore, not strictly comparable.

2. See text p. 6, para. 7 and 8.

TABLE 3. Principal Statistics of the Forty Leading Industries, Ranked According to the Value of Factory Shipments, 1954

No.		Establishments	Employees	Earnings	Cost at plant of materials used	Value added by manufacture	Selling value of factory shipments
		No.	No.	\$	\$	\$	\$

1. There were three major changes in concept affecting the data for the Primary Iron and Steel Industry in 1954. The first one involved a change in the method of counting establishments; the second concerned a change in valuing shipments of wire rods transferred to makers' own processing plants; while the third concerned the method of calculating "value added by manufacture". Figures for 1954 are therefore not comparable with previous years. See footnotes to Table 2 of the 1954 report on the Primary Iron and Steel Industry.

2. Apparent advance in the selling value of factory shipments is due in part to an actual gain in physical output, but the major factor contributing to this increase was a change in accounting procedure by some firms of the petroleum products industry in calculating value of factory shipments. This increased the value by approximately \$139,000,000 over what the value would have been by the former method.
