# DOMINION BUREAU OF STATISTICS <br> Industry and Merchandising Division 

# MANUFACTURING INDUSTRIES OF CANADA 

Section A<br>SUMMARY FOR CANADA<br>1960

Published by Authority of<br>The Honourable George Hees, Minister of Trade and Commerce

This report is one in a series of about 140 publications which present the results of the 1960 Census of Manufactures. Most reports in this series refer to specific industries, but there are summary reports for Canada and the provinces and for major industry groups. Adoption of the revised Standard Industrial Classification for 1960 compilations has necessitated changes in titles of many reports in this annual serles. The content of many industries ras also been affected (see following note on Indusrifal Classification).

Industry statistics given in these reports refer to number of establishments, employees, salaries and wages, cost of materials, supplies, fuel and electricity, gross value of shipments, inventories and value added by manufacturing. Details of materials used and products shipped are also given. Descriptions of the principal industry statistios, with : special reference to 1960 are as follows:

## Period Covered

Firms are asked to submit figures for the calendar year, if at all possible, and most reports are on this basis. Financial year teports for periods differing from the calendar year are accepted in instances where the firms find it impossible to suppl! calendar year data from accounting records. However the data on employees, salaries and wages are requested on a calendar year basis in all cases.

## Establishment

Data for the annual census is collected on an establishment basis. A firm with more than one plant is required to file a report for each plant. In most cases an establishment is a complete factory: sometines, however, a plant is divided into two or more establishments when it carries out operations classifiable to different industries and when separate accounting records are available. Usually the statistics for an establishment relate only to the manufacturing activities. Other activities such as construction at the plant by its own employees, wholesale or retail activities carried on at the plent location, etc., are not included, Plants engaged solely in repair work (except in the case of furniture. shipbuilding, boat building, aircraft and railway rolling stock industries) are not included but plants occupled in assembling parts into complete units are included.

## Employees

Administrative and office employees include all oxecutives and supervisory officials such as presidents, vice-presidents, secretaries, treasurers, etc.. together with managers, professional and technical employees, superintendents and factory supervisors above the working foremen level, and clerical employees. Working owners and partners are also included in this category.

Production and related workers include all other factory workmen whether paid on a monthly, weekly, hourly or piece-work basis. Working foremen doing work similar to that of the employees they supervise atre inclutel as are mantenance, wart
housing and delivery staffs. Employees on new construction work, in retail or wholesale operations, on outside piece work etc. are not included.

Production workers are reported by months, an average for the year being obtained by summing the monthly figures and dividing by twelve. This procedure is followed even though the plant did not operate in all months. Figures on employnent refer to calendar years whether or not some establishments reported other data on a financial year basis.

## Salaries and Wages

Salaries and wages refer to gross earnings of the employees described above, including sularies, wages, commissions, bonuses, the value of room and board where provider, deductions for income tax and social services such as sickness and unemployment insurance, pensions, etc., as well as any other allowances forming part of the employees' wages. Payments for overtime are included.

Salaries refer to amounts paid to administrative and office employees. Withdrawals by working owners of partners for normal living expenses for self and family are included but not their withdrawals for income tax. Wages refer to the amounts paid to production and related workers as defined above. Data on earnings refer to the calendar year whether or not some establishments reported other data on a financial year basis.

## Cost of Fuel and Electricity

Figures for fuel refer to amounts actually used, (including fuel used in cars and trucks). not to purchases unless the quantities are the same. Values refer to the laid-down cost at the works, including freight, duty, etc.

## Materials and Supplies Used

Figures represent quantities and laid-down cost values, at the works, of materials and supplies actually used during the year whether purchased from others or received as transfers from other plants of the reporting company. Amounts paid to other manufacturers for work done on materials owned by the reporting company are included. Returnable containers or any other items charged to capital account are not included. Fuels are not included. Goods bought from others or received as transfers from other plants of reporting companies for resale without further processing are not included. Maintenance and repait supplies not chargeable to capital account ape included.

## Factory Shipments

Factory shipments refer to shipments of goods made from own materials either in the reporting plant of by other manufacturers on the basis of a charge to the reporting plant for work done. All products and by-products shipped from the establishment are included whether for domestic use. export, of for government departments. Transfer shipments to sales outlets, distributing warehouses or to other manufacturing units of the reporting firm ape ircluded. Goods hought of recelved as ransfers
and resold without further processing are noi included. Values are computed on f.o.b. plant or plant warehollse hasis, and do not inclute sales tax or excise duties. Values of containers not returnable are included. Amounts received in payment for work done on materials owned by others are included.

In a few industries such as shipbuilding, aircraft, etc., where work on principal products extend over a relatively long period, the value of production is recorded rather than the value of shlpments. For those industries production is computed from the value of deliveries of complete units during the year plus the value of work done during the year on unfinished units less the value of work done in previous years on finished units dellvered in the year under review.

## Inventories

Values represent the book values of manufacturing inventories owned and held at the reporting plant. Figures include inventories held in warehouses of selling outlets which have been included with plant operations for purposes of reporting shipments.

## Value added by Manufacturing

Figures are computed from value of shipments plus or minus changes in inventories of finished goods and goods in process less cost of materials, fuel and electricity. This figure is sometimes referred to as net production. ${ }^{1}$

## Standard Industrial Classification

The revised Standard Industrial Classification which has been introduced with the 1960 Census of Manufactures provides for a breakdown of the universe into 140 industries arranged in 20 major groups compared with 135 industries in 17 major groups in the old classification which was used in the compilations for the years 1949 to 1959 inclusive. It incorporates changes considered desirable on the basis of experience in using the earlie: classification as well as those which take account of changes in the structure of Canadian industries associated with the rapid developments of the past decade. Full details are contained in the standard Industrial Classification Manual, Catalogue No. 12-501, which is available from either the Queen's Printer or the Dominion 3ureau of Statistics. Reporting establishments are classified or allotted to specific industries on the basis of the value of principal products made or shipped.

Many industries remain unchanged in the new classification but in many instances there have been substantial changes in content because of the shifting of establishments from one industry to another of in re-grouping of establishments. Where

[^0]changes have nccurted the principal statistics for 1957. 1958 and 1959 have been re-conpiled to provide data on a basis comparable with those for 1960 .

## Short Forms

Between 1949 and 1957, in an effort to ease the reporting burden for sinaller firms, a short form was used asking for the total value of shipments only or, in a few cases where losses of detail were significant, for quantities and values of principal products. For purposes of publication, missing data were estimated on the basls of appropriate ratlos. In general the cut-off point for these short forms was set at $\$ 50,000$ value of shipments. About $40 \%$ of the total number of establishments reported on the short form and accounted for less than 3 per cent of the total value of shipments.

In 1958, in order to establish a new base year, the small firms were asked to report all items of principal statistics together with some detail on materials and products.

For the 1959 Census, the short form was used again, but further steps were taken to ease the respondents' burden. First, the general limit for short forms was raised to $\$ 100,000$ value of shipments. In addition, a new intermediate form was developed. This form is a shortened version of the long form in that most of the general questions were pared down and the detailed lists of materials and products were limited to the more important items. The general limits for firms in this category were set at between $\$ 100,000-\$ 500,000$ value of shipments, but in the case of both the short and intermediate forms there were lower cut-offs for a number of industries in which the smaller firms accounted for a larger share of total shipments. On the other hand, limits were raised where this could be done without a significant loss of coverage. On most of the short forms for 1959, in addition to total value of shipments, data on principal products were requested. In a few industries, where loss of employment and earnings data were considered too large because of higher cut-offs, a question on total payroll was placed on the short form. This practice was followed again in 1960.

The intermediate and long forms provide complete data for the compilation of all elements of principal industry statistics and the details of materials and products. The one-page short form, although containing data on principal products and total value of shipments, does not request information on other elements of principal statistics such as value of inventories, materials, fuel and electricity and, in most cases, employment and salaries and wages, nor does it contain detailed data on volume and value of materials used. For purposes of compiling aggregates of principal statistics by industry and by geographic location, the missing data for each establishnent were estimated for 1959 by using, in general, ratios based on the change in the value of shipments between 1958 and 1959. The proportion of the estimated data was generally less than 5 per cent of the total in each category of principal statistics.

# MANUFACTURING INDUSTRIES OF CANADA 

## Section A

SUMMARY FOR CANADA

## 1960

Manufacturing statistics for 1960 were compiled in accordance with the Revised Standard Industrial Classification. The main feature of the revisions was the classification of manufacturing industries into twenty main groups in place of the eighteen groups formerly used. Furniture and fixtures was established as a new group while the Iron and steel products and Non-ferrous metal products groups were rearranged into three groups as follows
(a) Primary metal industries
(b) Metal fabricating (excluding machinery and transportation equipment)
(c) Machinery industries (excluding electrical machinery)

Individual industries in the Primary metal industries group can be distinguished between Iron and steel and Non-ferfous metals, but in the metal fabricating group no such distinction is possible, Developments in metallurgical processes and the use of alloys have resulted in alloy steels and nonferrous alloys being used interchangeably for many purposes so that individual establishments and industries cannot now be classified on the basis of type of materials used. Also the machinery industries have become sufficiently important to constitute a major group which is both distinctive and homogeneous.

The S.I.C. in effect prior to 1960 provided for a separate Coke and gas industry as part of the Products of petroleum and coal group. This industry included, in addition to gas plants operated as utilities, those coke plants operated as divisions of (a) chemical plants and (b) wholly integrated steel mills. The new S.I.C. implemented in 1960 consolidated these divisional coke operations with the major activity in the appropriate industry and at the same tinie transferred the gas plants operated as utilities out of manufacturing to the Electric power. gas and water utilities group. The net effect of these changes was the complete abolition of the Coke and gas industry as a separate industry in the new S.I.C.

The consolidation of the divisional coke operations mentioned above, particularly those operated by the wholly integrated steel mills, had a major impact on the overall cost of materials reported on the revised S.I.C. Under the old S.I.C. basis. Coal which accounted for the major material cost in the old Coke and gas industry was, in effect, double counted, once as coal in the Coke and gas industry and again as coke in the Primary iron and steel industry. This double counting of coal was elimi. nated by the consolidation of these coking operations in accordance with the revised S.I.C. Under the latter concept the coke previously reported separately as part of the material cost in the old Prinary
iron and steel industry is treated as an intermediate product of the steel mills and, accordingly, cost of same is not recorded. The effect of this treatment is a reduction in the overall cost of materials under the revised S.I.C.

The main differences between the revised and old classifications can be summarized as follows:

## Foods, Beverages

Poultry processors are added as a separate industry. Under the old classification only the poultry processed by slaughterers and meat packers was included in the annual survey of manufactures. Now all establishments primarily engaged in killing, dressing, packing or canning poultry are included with manufacturing.

Vegetable oil mills are transferred to this group. Formerly they were included with Chemicals and allied products.

## Textile Industries

Fibre preparing mills are constituted as a separate industry. These establishments were formerly included with:

Miscellaneous cotton goods
Miscellaneous woollen goods
Miscellaneous textiles
Pressed and punched felt mills are constituted as a separate industry. These establishments were formerly included with:

## Miscellaneous woollen goods

Miscellaneous cotton goods
Thread mills now include all establishments producing thread, regardless of the nature of the fibre used. Formerly only manufacturers of cotton thread were included with the Cotton thread industry.

The former Miscellaneous cotton goods and Miscellaneous woollen goods industries have been discarded.

The establishments of Miscellaneous cotton goods were transferred mostly to Fibre Preparing mills and Pressed and punched felt mills.

The establishments of Miscellaneous waollen goods were transferrel mostly to Woollen cloth mills and Pressed and punched felt mills.

## Clothing Industries

Fur dressing and dyeing was transferred to the Miscellaneous group of industries.

## Wood Industries

Furniture industry was cransferred from this group to the new group. Furniture and fixtures industries.

## Furniture and Fixtures Industries

This group now includes the old Furniture industry plus establishments manufacturing furniture that were formerly included with the metal and miscellaneous industries groups. This group is now composed of the following industries:
(a) Household furniture
(b) Office furniture
(c) Other furniture industries
(d) Electric lamp and shade industry (formerly included with the Miscellaneous Group of industries).

## Printing, Publishing and Allied Industries

Publishers of non-commercial periodicals, such as institutional publications, constituting over 1,000 reporting units are now excluded from the manufacturing sector. Included now, however, are publishers (only) of books which were formerly excluded.

## Electrical Products Industries

1. Eight industries were established in place of the five industries formerly used.
2. In general, the new S.I.C. industry, Manufac= turers of electrical industrial equipment, compares to the old S.I.C. industry, Heavy electrical machinery and equipment.
3. In the new S.I.C. two new industries, Manufacturers of household radio and television receivers and Communications equipment manufacturers are a split of the old S.I.C. industry, Telecommunications equipment. There is one significant change in the group in the transfer of manufacturess of telephone equipment from the old S.I.C. industry, Miscellaneous electrical products to the new S.I.C.Communications equipment manufacturers.
4. Also in the new S.I.C. two new ind ustries, Manufacturers of small electrical appliances an * Manufacturers of major appliances (electric and nonelectric) take the place of the old S.I.C. industry, Refrigerators, vacuum cleaners and appliances. The significant change here is the transfer of Manufacturers of washing machines and sewing machines from the old S.I.C. industry, Household, Office and store machinery and Stoves, electric and nonelectric, from the old S.I.C. industry, Heating and cooking apparatus to the new S.I.C, industry, Major appliances (electric and non-electric).
5. Another new S.I.C. industry, Manufacturers of electric wire and cable was split out of the old S.I.C. industry, Miscellaneous electrical products.
6. The industry Battery manufacturers in the new S.I.C. is unchanged from the old S.I.C. industry, Batteries except for the change in title.

The following changes were made in the Metal and niachinery industries;

## Revised Classification

## Old Classification

## Primary metals

Iron and steel mills
Steel pipe and tube mills
Iron foundries
Smelting and refining
Aluminum rolling, casting and extruding
Copper and alloy rolling, casting and extruding
Metal rolling, casting and extruding, n.e.s.

## Metal fabricating industries

(excluding machinery industries)
Boiler and plate works
Fabricated structural metal industry
Ornamental and architectural metal industry
Metal stamping. pressing and coating industry
Wire and wire products manufacturers
(excluding electric wire and cable)
Hardware, tool and cutlery manufacturers
Heating equipment manufacturers ${ }^{1}$
Machine shops ${ }^{2}$
Miscellaneous metal fabricating industries
Nachinery industries excluding electrical ma chinery)
Agricultural implement industry
Miscellaneous machinery and equipment manufacturers
Commercial refrigeration and air conditioning equipment manufacturers
Office and store machinery manufacturers

## Iron and steel products

## Agricultural implements

Boilers, tanks and plate work
Bridge and structural steel work
Castings, iron
Hardware, tools and cutlery
Heating and cooking apparatus
Machinery, household, office and store
Machinery, industrial
Machine shops
Machine tools
Primary iron and steel
Sheet metal products
Wire and wire goods
Miscellaneous iron and steel products

## Non-ferrous metal products

Aluminum products
Brass and copper products
Jewellery and silverware ${ }^{3}$
Non ferrous metal smelting and refining
White metal alloys
Miscellaneous non-ferrous metal products

[^1]
## Non-metallic Mineral Products Industries

The Salt industry which was formerly considered both as mining as well as manufacturing is now considered only as a mining operation and has therefore been transferred to the Mining sector.

## Petroleum and Coal Products Industries

Absorption plants transferred from the Petroleum refining industry to the Mining sector.

## Chemical and Chemical Products Industries

The revised classification provides for a breakdown of the Chemical group into ten separate industries under the new title of Chemical and chemical products industries. This corresponds generally to the group formerly presented as Chemicals and allied products, except for the Vegetable oils industry which was transferred from the Chemical group to the Food and beverage industries group. The implementation of the new classification introduced a number of intra-industry changes, as follows:

1. Transfer of the Vegetable oils industry to the Food and beverage industries group.
2. Transfer of firms manufacturing fertilizer materials, such as ammonium nitrate, ammonium phosphate, etc., from the Fertilizers industry (old basis) to the new S.I.C. industry Manufacturers of Industrial chemicals. Manufacturers of superphosphate will continue to be classified to the new S.I.C. industry, Manufacturers of mixed fertilizers, along with firms manufacturing mixed fertilizers.
3. The abolition of the Coal tar distillation industry, the Compressed gases industry, the Adhesives industry and the Polishes and dressings industry as separate industries. Details formerly presented for the Compressed gases industry will now be included as part of the new S.I.C. industry, Manufacturers of Industrial chemicals. The remalning three industries will be included in the new S.I.C. industry, Other chemical industries, n.e.s.
4. Details relating to the manufacture of writing inks will now be included as part of the new S.I.C. industry, Other chemical industries, n.e.s.; printing inks will be covered separately in a new subdivision, Manufacturers of printing inks.
5. Statistics relating to the manufacture of synthetic rubber, previously included in the Miscellaneous chemical products industry (old basis) will now be included in the new S.I.C. industry, Manufacturers of Industrial chemicals.
6. Data relating to the manufacture of explosives, previously presented in the Miscellaneous chemical products industry (old basis) are now to be shown separately in a new S.I.C. industry, Explosives and ammunition manufacturers.
7. Changes in the following industries resulting from the implementation of the new S.I.C. may be generally considered as minimal. Manufacturers of pharmaceuticals and medecines (formerly the Medicinal and pharmaceutical preparations industry); Paint and varnish manufacturers (formerly the Paints, varnishes and lacquers industry); Manufacturers of soap and cleaning compounds (formerly the Soaps, washing compounds and cleaning preparations industry); Manufacturers of toilet preparations (formerly the Toilet preparations industry).

## Miscellaneous Industries

Dental laboratories added as a new industry for the first time.

Venetian blind manufacturers now forms a separate industry. Formerly classifled with Miscellaneous wood industries.

Fur dressing and dyeing transferred from the Clothing industries to this group.

Jewellery and silverware transferred from the Non-ferrous metal products to this group.

Electric lamp and shade industry transferred from this group to the Furniture and fixtures group.

The changes in classification listed above, the addition of new industries and the transfer of indus. tries from manufacturing to other sectors of the economy, make it extremely difficult to compare the manufacturing statistics compiled on the revised classification basis with those compiled on the old basis. In order to get comparability for 1960 figures with those for back years, the statistics of manufactures have been recompiled on the new basis back to 1957. In order to serve as a guide for revising the figures for total manufacturing for back years, the following tables indicate the major adjustments made in changing to the revised basis. Although adjustments can be made for manufacturing as a whole on a more or less comparable basis for back years, for some of the major groups, however, this is impos. sible without a complete recompilation of the individual returns.

Reconciliation of the Revised Manufacturing Statistics for 1959 on the New Standard Industrial Classification Rasis with the Statistics Previously Published on the Old Standard Industrial Classification Basis

[^2]Reconciliation of Revised 1960 Manufacturing Statistics with the Revised Figures for 1959

|  | Estab-lishments | Employees | Salaries and wages | Cost at plant of materials used | Selling value of factory shipments |
| :---: | :---: | :---: | :---: | :---: | :---: |

| Percentage difference |  | - 1.0 | $+2.5$ | + 0.8 | + 1.8 |

## GENERAL REVIEH, 1960

The recovery in manufacturing production which took place in 1959 was maintained more or less during 1960. Selling value of factory shipments at $\$ 23,747,457,083$, value added by manufacture at $\$ 10,533,208,994$ and salaries and wages paid at $\$ 5,207,167,393$ were all the highest on record. The number of persons employed in 1960 at $1.294,629$ fell short by 5.1 p.c. from the record attained in 1957. It is of interest to note that the value added by manufacture which is the real measure of manufacturing production topped the ten billion mark for the first time in 1959.

Compared with the previous year, the value of factory shipments in 1960, after adjustments, increased by 1.8 p.c. and salaries and wages paid by 2.5 p.c. The number of employees and the physical volume of production were, however, lower, the former declining by 1.0 p.c. and the latter by 0.3 p.c. The greater decline in employment than in volume of production follows the trend in recent years for the same volume of output to be produced with fewer employees. Between 1949 and 1959 the volume of manufactured products increased by 48.9 p.c. While the number of persons employed increased only by 11.3 p.c. The increase in the salaries and wages paid in 1960 in spite of a drop in the number of employees was due to the continuing advance in hourly and weekly earnings, a trend common to all other sectors of the economy.

An important factor in sustaining a high level of production in 1960 was the continuing high spending on capital goods, such as construction and machinery and equipment of all kinds. Total investment in capital goods amounted to $\$ 8,262,000,000$, a decrease of $\$ 155,000,000$ over 1959. Spending on machinery and equipment was $\$ 101.000,000$ higher, while spending on construction projects was $\$ 256,000,000$ lower. In spite of the higher spending on machinery and equipment, the index of the physical volume of goods produced by the machinery group of industries was 0.6 p.c. lower. The big drop in the spending on construction projects had only a moderate affect on the industries producing building materials. In the case of the lumber industry an increase in the export of timber. lumber and shingles counterbalanced the decline in the domestic spending for construction purposes, resulting in a net decrease of only $0.4 \mathrm{p} . \mathrm{c}$. in the volume of wood products manufactured. The output of cement, however, was more severely affected, production dropping to $5,787,225$ tons in 1960, a decline of 7.9 p.c. Another stimulating factor in 1960 was the impact on the consumer goods industries of an increase of about 372.000 in population, with a continuing rise in wages, salaries and supplementary labout income.

Export demand for Canadian manufactured products was another strong factor in stimulating the high level of production in 1960. Exports of partly manufactured products at $\$ 1,640,637,000$ were $\$ 186,736.600$ higher than in 1959 and exports of fully manufactured goods at $\$ 1,969.655,000$ were
$\$ 109,021,000$ higher. The increase in the exports of both partly and fully manufactured products amounted to 9.0 p.c. There were substantial improvements in the export of lumber and timber, shingles, wood pulp, newsprint, aluminum and its products, nickel. copper and its products, zinc, automobiles and parts, crude artificial abrasives, fertilizers, lead and lead products and non-farm machinery. At the same time declines occurred in a number of major export items which included veneer and plywood, whisky, wheat flour, farm implements and machinery, aircraft, synthetic plastics and its products and uranium ores and concentrates. The decline in the export of aircraft was particularly sharp, from $\$ 109,112,783$ in 1958 to $\$ 24,960,067$ in 1959 and $\$ 20,745,482$ in 1960, resulting in a drop of 32 p.c. in the volume output of the aircraft industry since 1957.

As already mentioned, the physical volume of production for manufacturing as a whole reached an all-time high of 149.8 in 1959 but declined somewhat to 149.3 in 1960, a drop of 0.3 p.c. Between 1959 and 1960 the volume of non-durable goods of consumer goods increased 1.1 p.c. while durable goods declined by 2.1 p.c. Since the end of the Second World War the durable goods industries experienced an almost uninterrupted expansion in production. the only exceptions being 1954, 1957 and 1958. Despite their steadier postwar expansion, the nondurable goods sector recorded an increase of only 54 p.c. between 1946 and 1956 while durable goods increased 92 p.c. This gap was narrowed between 1957 and 1960 , so that for the whole period 1946. 1960 durable goods expanded 83 p.c. and non-durable goods 69 p.c.

The trend of production of non-durable goods in 1960 was mixed, eight groups reporting increases and four groups declines. The net result was an increase in volume of production of 1.1 p.c. for the group as a whole as compared with 1959. The percentage increases ranged between 5.4 p.c. for chemicals and allied products to 1.2 p.c. for tobacco and tobacco products. Of the four groups reporting declines, rubber goods with a loss of 11.0 p.c. experienced the greatest drop in production. This was followed by leather goods with a loss of 7.1 p.c.. clothing 4.6 p.c. and textiles 1.5 p.c. In the durable goods sector only one group, viz. non-ferrous metal products, reported a greater volume of production in 1960, the increase being 10.1 p.c. as compared with 1959. The greatest decline of 6.7 p.c. was reported by iron and steel products, followed by non-metallic mineral products with a loss of 5.5 p.c. electrical apparatus and supplies 2.5 p.c.. transportation equipment 1.1 p.c. and wood products 0.4 p.c.

Ontario which is recognized as one of the world's major industrial areas, accounts for approximately half of Canada"s manufacturing production. Despite the great industrial progress made by other provinces. Ontario continues to maintain its predominance. and in 1960 accounted for 49.2 p.c. of the total value of factory shipments, Quebec with
30.4 p.c. of the total shipments ranks as the second largest industrial province, while British Columbia with 8.1 pic. of the total ranks third. Due to the drop in the production of durable goods in 1960 , Ontario suffered a decline in its share of the total while Quebec and British Columbia reported increases.

The level of manufacturing production in 1960, as measured by the number of persons employed, varied from province to province. Compared with the previous year, the greatest increase in employment of 6.1 p.c. was reported by New Brunswick. Prince Edward Island with an increase of 1.6 p.c. was second in this respect, followed by Nova Scotia with an increase of 1.5 p.c. Saskatchewan 0.7 p.c. and Quebec 0.6 p.c. Manitoba suffered the greatest loss in employment of 2.9 p.c., followed by Ontario with a loss of 2.2 p.c.. Newfoundland 1.5 p.c., British Columbia 1.2 p.c. and Alberta 1.1 p.c. Perhaps the most outstanding feature in 1960 was the continued expansion of manufacturing employment in Saskatchewan which increased 0.7 p.c., after a rise of 2.1 p.c. in 1959 and 2.3 p.c. in 1958. a year when all other provinces reported declines. Another feature was the gain of 2.6 p.c. in employment in the Atlantic Provinces, when other economic regions, with the exception of Quebec, suffered declines.

The industrial expansion of Canada since Confederation has been phenomenal. In the past generation alone, Canada has changed from a coun= try producing and exporting mainly primary products lo a country that is increasingly producing and exporting manufactured products, until to-day manufactures account for about 26 p.c. of the value of all goods and services produced, and also ranks as the leading employer of labour in Canada.

Canada is no longer on the fringes of indus. trialization but ranks among the world's most important manufacturing countries. Basic historical developments. such as the opening of the West and the magnitude of requirements of all kinds for World Wars I and II, have been followed by recent dis coveries of fat-reaching significance. Such events as the discovery of a major oil pool on the prairies in 1947, the discovery of large-scale deposits of iron and the successful search for uranium have given new dimensions to Canadian thinking and business planning. These are the factors that explain the records of capital expenditures year by year since the end of the War. Yet it is not the mere rate of expansion that is significant. There have been other periods when Canada's population has grown more rapidly and in many respects the rate of industrial expansion in the late 1920 's was relatively as great as in the post war years. The real significance of the latter period is that never before has there been an advance on such a broad industrial front.

The second point to be observed is the chang ing emphasis of Canadian manufacturing activity. By 1949 the period of post-war conversion was passed
and Canada had entered a new phase of economic expansion which derived its dynamic from the discovery of new resources and the application of new processes. This meant that even the sharp recession in the United States in the year 1949 failed to have significant effects in Canada. The influence of Korea and the consequent rearmament program gave an added impetus to the expansion of Canadian industry and to the development of Canadian basic resources. Capital expenditures that contributed most of the defence of Canada were given priority. Additional capacity was created to meet requirements of the specialized defence program-aircraft, electronic equipment, ships and guns - many items of which had never before been produced in Canada. Measures such as steel control, credit regulations and deferred depreciation had the desired effect. A shift gradually took place toward the further expansion of basic industrial capacity and away from investment in consumer goods and services.

The stability of curfent levels of manufacturing is indicated by the fact that such activity is the result of business assessment of resources and market potentialities. Millions of dollars are being invested in oil because the prairies can produce oil as economically as other great fields on the North American Continent. Petro-chemical plants are being erected because the raw materials are readily at hand. Kitimat is based on the coincidence of abundant and cheap hydro-power and access to ocean transportation, both of which are essential to the low-cost production of aluminum. The exploitation of the Ungava iron deposits rests on the belief that the steel industry of the North American Continent will need the high-grade ores involved in order to meet continuing peace-time demands. No country is in a more favourable position than Canada to supply uranium for the production of atomic energy.

Of strategic importance, and probably of even greater long-term significance to the Canadian economy, has been the growing world-wide shortage of raw materials, a shortage born of rising levels of employment and income, and accentuated by the course of international events, especially since 1950. These demands have shown few signs of abating and they have led to substantial increases in Canadian primary manufacturing capacity, particularly in so far as the light metals, nickel, chemical fertilizers and the cheaper grades of paper are concerned.

In recent years the demands stemming from population growth and a rising standard of living have been noticeable at all levels. In food proces. sing, a steady up-grading in the quality of foods sold on the domestic market has been even more important than population growth. The two together have almost doubled the dollat sales of processed foods in this country since 1945. And at the intermediate level other important changes have taken place. Many of Canada's new chemical plants, for example, have been built with the domestic consumer market in mind. Frequently using petroleum or natural gas as a source of raw material they have
gone a long way towards making Canada independ ent of imports in such categories as vanillin, nylon and rayon intermediates, and plastics for packaging and similar uses.

The tremendous development which has taken place in Canada during the decade preceding 1957 is strikingly illustrated by the increase of $70.3 \mathrm{p} . \mathrm{c}$. in the physical volume of manufactured products between 1946 and 1956 as compared with an increase of only 31 p.c. in the population. Part of this in crease. resulted from an increased demand abroad for Canadian manufactured goods, part to the demands imposed on Canadian industry as a result of the expansion in the economy during the past decade, and part to the increase in the standard of living of the Canadian people. The increase of $91.9 \mathrm{p} . \mathrm{c}$, in the output of durable goods consisting mainly of building materials, transportation equipment as well as ma chinery and equipment of all kinds reveals the extent of the contribution made by Canadian industry to the phenomenal expansion in the productive capacity of the country. Non-durable goods during the same period increased by 53.8 p.c. Although this increase is quite large it is, nevertheless, overshadowed by the much larget increase of 91.9 p.c. in the durable goods industries of the manufacturing sector.

With only one exception, all groups in both the durable and non-durable sectors recorded marked anvances in volume output since 1946, the exception being leather products with a decline of $6.8 \mathrm{p} . \mathrm{c}$. In the durable goods sector the most striking ad vance was made by the electrical apparatus and supplies group with an increase of 182.6 p.c. This was followed by non-metallic mineral products with 166.0 p.c., transportation equipment 95.9 p.c., iron and steel products 79.8 p.c., non-ferrous metal products 62.6 p.c. and wood products 59.3 p.c.

In the non-durable goods sector the greatest advance was made by the products of petroleum and coal group with 190.8 p.c. This was the highest increase of any group of either sector. Chemicals and allied products with an increase of 100.9 p.c. came second, followed by miscellaneous industries with 83.3 p.c., printing, publishing and allied industries 78.5 p.c., rubber goods 72.1 p.c., paper products 70.1 p.c., beverages 68.4 p.c., tobacco and tobacco products 61.0 p.c., textiles 32.2 p.c.,
loods 27.6 p.c. and clothing 23.4 p.c. The output of leather products group declined 6.8 p.c.

Manufacturing establishments reporting in 1960 numbered 36.682 . Of these 635 were located in New. foundland, 184 in Prince Edward Island. 1.278 in Nova Scotia, 901 in New Brunswlek. 11.961 in Quebec, 13,387 in Ontario, 1.592 in Manitoba. 887 in Saskatchewan, 1,848 in Alberta, 3,995 in British Columbia and 14 in the Yukon and Northwest Terri tories. These plants furnished employment to $1,294,629$ persons who received $\$ 5,207,167,393$ in salaries and wages. They also shipped goods with a selling value at the factory of $\$ 23,747,457,083$ and spent $\$ 12,705,070,820$ for materials, while the value added by manufacture totalled $\$ 10,533,208,994$.

The value added is ohtained by subtracting the cost of materials, including fuel and electricity, from the gross value of products. The difference represents the value added to the materials by labour. It is this difference which the employer of labour uses to pay for the labour itself. the overhead expenses, interest and profits.

With the change over to a shipments basis in 1952 value of production figures are not now being reported by manufacturing establishments. They now report the value of their shipments which must be converted to a value of products basis in order to calculate value added. The formula used is "value of shipments plus closing inventory less opening inventory of finished goods and goods in process equals value of products made"

As the Census of Industry schedules for 1952 and 1953 did not contain data for opening and clos ing inventories. no calculations can be made directly for value of production. For these two years, there fore, the value added is obtained by subtracting from the shipments the cost of materials, including fuel and electricity. The value thus obtained is somewhat different to the actual value. For 1954 and 1955 value of production figures were obtained by adjusting shipments for inventory change of finished goods only. while for 1956 and later years the value of production figures were adjusted for inventory change in both finished goods as well as goods in process. The figures for value added for 1956 and subsequent years are. therefore, com parable with 1951 and earlier years.

Variation in Volume of Production ${ }^{1}$

'For 1924-51, inclusive, the "Value added by manufacture" is computed by subtracting the cost of fuel, electricity and materials from the gross value of products. For 1952, 1953 and 1957 the deduction is made from "Value of factory shlpments". In 1954 and subsequent years from the calculated value of production. Figures prlor to 1924 are not comparable since statistics for cost of electriclty are not available. calculated value
(See text p, 13).
${ }^{3}$ in 1952 and subsequent years the basis of collection is "Value of factory shipments" instead of "Gross value of products".
3 A change in the method of computing the number of wageearners in the years, 1925 to 1930 , inclusive, increased the number somewhat over that which the method otherwise used would have given. In 1931, however, the method in force prior to 1935 was readopted.

A Newfoundland is included for 1949 and subsequent years, however, figures for the fish processing Industry, 1949 and 1950 , were notavallable for this province and there fore, not included.
${ }^{5}$ There were three major changes in concept affecting the data for the Primary Iron and Steel Industry in 1954 . The first one involved a change in the method of counting establishments, the second concerned a change in valuing shipments of wire rods transferred to makers' own processing plants, whife the third concerned the method of calculating "value added by manufacture", Figures for 1954 and subsequent years are therefore not comparable with previous years. See footnotes to Table 2 of the 1954 report on the Primary Iron and Steel Industry.

- In 1954 there was a change in procedure of reporting the value of products in the Petroleumproducts industry. This increased the value of products by a pprox imately $\$ 139,000,000$. Another change was made in 1959 which lowered the value of production in the Petrole um Refining Industry by $\$ 300,000,000$. ${ }_{2}$ Principal Statistics for 1957, 1958 and 1959 have been re-compiled to provide data on a basis comparable with those for 1960 . Statlstics for 1960 include two industies which were not covered in previous years: Poultry Processors in the Food and Beverage Industries Group and Dental Laboratories in the Miscellaneous Manufacturing Industries Group. (See text D. 7.)

[^0]:    ${ }^{1}$ To arrive at the National Accounts concept of "gross domestic product at factor cost", it would be necessary to subtract also the cost of office supplies used, advertising, insurance and other goods and services obtained from other businesses. Data on these inputs are not collected on the annual Census of Manufactures. Value added figures for "The primary Industries and construction"' are published in D.B.S. publication 61-202. Survey of Production.

[^1]:    ${ }_{2}^{1}$ Domestic stoves and ranges now included with Manufacturers of major appliances in the Electrical products group.
    ${ }_{2}$ Now includes tool and die making.
    ${ }^{3}$ Transferred to Miscellaneous group of industries.

[^2]:    ${ }^{1}$ Non-comnercial periodicals such as house organs etc, have been discarded.
    ${ }^{2}$ See text on page 7 for the explanation of the reduction in the cost of materials and value of factory shipments. About $\$ 47,000,000$ of the loss in the value of shipments is accounted for by the disappearance of coke as a commodity.

[^3]:    ${ }^{2}$ Canada and provinolal figures do not include "Poultry Processors" and "Dental Laboratories".
    ' Does not include "Poultry Processors",
    2 Does not include "Dental Laboratories".

[^4]:    ${ }^{1}$ Calculated value of production (shipments plus closing inventory, minus opening inventory of goods in process and finished products) less cost of materials and fuel and electricity used. (See text p. 13.)
    ${ }^{3}$ Statistics for 1960 include two Industries which were not covered in previous yesrs: Poultry Processors in the Food and Beverage Industries Group and Dental Laboratories in the Miscellaneous Manufacturing Industrles Group. (See text $\left.p_{;} 7.\right)$ fer from those published previously.

[^5]:    ${ }^{2}$ See foutnote 1 Table 2.
    ${ }^{2}$ Reported on a production hasis.
    ${ }^{3}$ Statistin's for 1960 include two industries which were not covered in previous years: Poultry Processors in the "Food and Beverage Industries' Group and Dental Laboratories in the "Miscellaneous Manufacturing Industries" Group. (See text, p. 7.)

[^6]:    : See fontnote 7, Table 1.

[^7]:    ${ }^{2}$ See fontnote 1 , Table 2.

[^8]:    ${ }^{1}$ See footnote 7 . Table 1.

[^9]:    ${ }^{2}$ See footnote 1, Table 1.

[^10]:    ${ }^{2}$ See footnote 7 , Table 1.
    ${ }^{2}$ See footnote 1, Table 1,

[^11]:    ${ }^{3}$ The figures for 1959 and 1960 are not comparable to those of 1957 and 1958 because of a change in the inethod of valuation for products in the Petroleum Refining Industry. It is estimated that if the revised basis of valuation had been used for 1957 and 1958 the value of 5 hipments in those years would have been about $\$ 300,000,000$ lower.

[^12]:    ${ }^{1}$ See footnote 7. Table 1.

[^13]:    ${ }^{2}$ See footnote 3, page 23.

[^14]:    ${ }^{1}$ See lootnote 2, Table 2.

[^15]:    : See footnote 1, Table 2.

    - Reported on a production basis.

[^16]:    * See footnote 1, Table 2.

[^17]:    Reported on a production besis.

[^18]:    'Reported on a production basls.

[^19]:    - See footnote 1. Table 2.

[^20]:    - Reported on a production basis.

[^21]:    ${ }^{10}$ See footnote 2, Table 2.

[^22]:    ${ }^{11}$ See footnote 1. Table 2.
