NOTICE

The annual reports prepared by the Industry and Merchandising Division of the Bureau of Statistics are divided into 3 volumes as follows: Volume I — The Primary Industries, including mining, forestry and fishing; Volume II — Manufacturing; Volume III — Merchandising and Services. The volumes are made up of parts, and the parts in turn are subdivided according to the industries or provinces which they comprise.

Volume II consists of the following parts, the first two of which deal with manufacturing as a whole and the balance with the major manufacturing groups:

- I — General Review of the Manufacturing Industries, \$1.50
- II — The Manufacturing Industries of Canada,
(7 sections, see below:)
- III — Foods and beverages
- IV — Tobacco and tobacco products
- V — Rubber products
- VI — Leather products
- VII — Textile mills
- VIII — Knitting mills
- IX — Clothing
- X — Wood and paper products
- XI — Printing trades
- XII — Iron and steel products
- XIII — Transportation equipment
- XIV — Non-ferrous metal products
- XV — Electrical apparatus and supplies
- XVI — Non-metallic mineral products
- XVII — Products of petroleum and coal
- XVIII — Chemicals and allied products
- XIX — Miscellaneous manufactures

The present report belongs in Part II. It is punched to permit filing in a ring binder along with other reports of the group, the full list of which is as follows:

- Section A. Summary for Canada, 25¢
- Section B. Atlantic Provinces, 50¢
- Section C. Province of Quebec, 25¢
- Section D. Province of Ontario, 25¢
- Section E. Prairie Provinces, 40¢
- Section F. Province of British Columbia, including Yukon and Northwest Territories, 25¢
- Section G. The Manufacturing Industries of Canada,
Regional Distribution, 75¢

THE MANUFACTURING INDUSTRIES OF CANADA

Section B

ATLANTIC PROVINCES

1954

The Atlantic Provinces are of economic importance in a number of fields, such as pulp and paper, fish processing, sawmills and primary iron and steel. In Newfoundland manufacturing production is dominated by the forest and fisheries resources. Pulp and paper was the most important industry in 1954 with shipments valued at \$62,125,755, followed by fish processing with \$13,148,467. These two industries accounted for 69 per cent of the total production of the Province. In Prince Edward Island agriculture and fishing resources make butter and cheese, slaughtering and meat packing, fish processing, and prepared stock and poultry feeds the leading industries. Nova Scotia is renowned for its coal mines and its fisheries as well as extensive forests and agricultural lands and is favoured with easy access by sea to the high-grade iron-ore supply of Newfoundland. On these resources are based the leading manufactures of fish processing, primary iron and steel, shipbuilding and repairs, pulp and paper, sawmills, railway rolling stock, and butter and cheese. In addition, important petroleum refineries; cotton yarn and cloth; and coke and gas plants add to the diversification in the Province. The forests of New Brunswick give a leading place to its pulp and paper and sawmilling industries. Other important manufacturing and processing are based on fish and agricultural resources.

Nova Scotia and New Brunswick, despite the lack of large rivers, have valuable sources of hydraulic power, a considerable portion of which has been developed. Tentative estimates give Newfoundland a potential of almost 1,000,000 h.p. at ordinary minimum flow, while in Labrador, the Hamilton River is outstanding as a potential source of power. Turbine installation at the end of 1954

totalled 323,150 h.p. in Newfoundland, 1,882 in Prince Edward Island, 170,908 in Nova Scotia and 164,130 in New Brunswick. Compared with Quebec, Ontario and British Columbia, the installed power in the Atlantic Provinces, is very small, amounting to 660,070 h.p. This compares with a total of 1,125,445 in the Prairie Provinces and 16,684,131 in the whole of Canada.

Considering the Atlantic Provinces as an economic unit, pulp and paper was the leading industry in 1954 with factory shipments valued at \$171,603,019. This was followed by fish processing with \$78,323,308, sawmills \$37,535,088, primary iron and steel \$32,270,425, shipbuilding and repairs \$31,039,179, and railway rolling stock \$23,399,221. These six industries accounted for 52 per cent of the total production of the Atlantic Region. Other leading industries, in order of value of factory shipments, and with shipments valued at \$10,000,000 or more, were: sugar refining, butter and cheese, petroleum products, slaughtering and meat packing, sash, door and planing mills, bread and other bakery products, miscellaneous foods, breweries, prepared stock and poultry feeds, and printing and publishing.

According to the table below, manufacturing establishments reporting in 1954 numbered 3,582 for the Atlantic Provinces as a whole. These plants furnished employment to 63,384 persons who received \$159,951,065 in salaries and wages. They also shipped goods with a selling value at the factory of \$720,460,846 and spent \$382,015,377 for materials, while the value added by manufacture totalled \$313,322,336.

Total	3,582	63,384	159,950	382,016	313,323	720,462

In the Atlantic region the program of industrial development has been more selective than in some of the other provinces. Fish processing, new sawmills, increased pulp-making capacity and the manufacture of non-metallic building materials like cement and gypsum products have accounted for well over half of the industrial growth. There are, how-

ever, a few outstanding exceptions. Two sizeable defence plants have been established in Nova Scotia, one to repair and overhaul naval aircraft and the other to build and repair radar and related electronic equipment. Considerable development has taken place in Newfoundland. Besides plants for the manufacture of cement and gypsum wallboard

THE MANUFACTURING INDUSTRIES

and plaster, factories for producing boots and shoes, birch veneer, leather goods, industrial machinery and a leather tannery were established, thus broadening the industrial base of the province. With these exceptions, most of the developments in the Atlantic Provinces have been either small and scattered or confined to the modernization and expansion of manufacturing facilities that were already established at the close of World War II.

In spite of the rapid development in the Atlantic Provinces since 1949 manufacturing production did not quite keep pace with the development in the more industrialized provinces of Ontario, Quebec and British Columbia. This is indicated by a slight drop in the Atlantic Provinces' share of the Canadian total which declined from 4.52 in 1949 to 4.10 in 1954. In number of persons employed there was a decrease of 0.2 per cent for the Atlantic Provinces as compared with an increase of 8.1 per cent for Canada as a whole. For salaries and wages paid the increase was 34.2 per cent as compared with 50.2

per cent for Canada, and in selling value of factory shipments the increase was 25.3 per cent for the Atlantic Provinces and 40.6 per cent for Canada as a whole.

Up to 1952 the increase in employment in the Atlantic Provinces was about the same as for Canada as a whole. In 1953 and 1954, however, employment in the Atlantic Provinces declined by 1.2 p.c. and 8.0 p.c. respectively, while for Canada as a whole there was an increase of 3.0 p.c. in 1953 and a decline of 4.5 p.c. in 1954. The increased employment since 1949 reported by Newfoundland, Prince Edward Island and Nova Scotia was offset by a drop of 5.7 p.c. in New Brunswick, resulting in a net decline of 0.2 p.c. for the Atlantic Provinces as compared with an increase of 8.1 p.c. for Canada as a whole. Selling values of factory shipments were 25.3 p.c. higher in the Atlantic Provinces while for Canada as a whole they were 40.6 p.c. higher.

1. Exclusive of fish processing.

2. 1951 and previous years value added is computed by subtracting cost of fuel, electricity & materials from value of products; 1952 & 1953 from factory shipments; 1954 from calculated value of production.⁴

3. In 1952 and subsequent years the basis of collection is "Value of factory shipments" instead of "Gross value of products".

4. See last three paragraphs of text, Section A, Summary for Canada.

1. In 1951 and previous years the value added by manufacture is computed by subtracting the cost of fuel, electricity and materials used from the gross value of products. For years 1952 and 1953 the deduction is made from the value of factory shipments and in 1954 from the calculated value of production³.

2. In 1952 and subsequent years the basis of collection is "Value of factory shipments" instead of "Gross value of products".

3. See last three paragraphs of text, Section A, Summary for Canada.

Selling value of factory shipments	"	23,198,970	23,469,743	+ 270,773

1. In 1954 the cost of fuel, electricity and materials used is deducted from the calculated value of production² instead of from the value of factory shipments as in 1953. The figures for these years are, therefore, not strictly comparable.

2. See last three paragraphs of text, Section A. Summary for Canada.

1. In 1951 and previous years the value added by manufacture is computed by deducting the cost of fuel, electricity and materials used from the gross value of products. For years, 1952 and 1953 the deduction is made from the value of factory shipments and in 1954 from the calculated value of production³.

2. In 1952 and subsequent years the basis of collection is "Value of factory shipments" instead of "Gross value of products".

3. See last three paragraphs of text, Section A, Summary for Canada.

1. In 1954 the cost of fuel, electricity and materials used is deducted from the calculated value of production² instead of from the gross value of products as in 1953. The figures for these years are, therefore, not strictly comparable.

3. There were three major changes in concept affecting the data for the Primary Iron and Steel Industry in 1954. The first one involved a change in the method of counting establishments; the second concerned a change in valuing shipments of wire rods transferred to makers' own processing plants; while the third concerned the method of calculating "Value added by manufacture." Figures for 1954 are, therefore, not comparable with previous years. See footnotes, Table 2 of the 1954 report on the Primary Iron and Steel Industry.

1. In 1951 and previous years value added by manufacture is computed by deducting the cost of fuel, electricity and materials used from the gross value of products. For years, 1952 and 1953 the deduction is made from the value of factory shipments and in 1954 from the calculated value of production³.

2. In 1952 and subsequent years the basis of collection is "Value of factory shipments" instead of "Gross value of products".

3. See last three paragraphs of text, Section A, Summary for Canada.

1. In 1954 the cost of fuel, electricity and materials used is deducted from the calculated value of production² instead of from the gross value of products as in 1954. The figures for these years are, therefore, not strictly comparable.

2. See last three paragraphs of text, Section A, Summary for Canada.
