## PUBLICATIONS

The results of the annual Census of Industry are published by the Dominion Bureau of Statistics in a series of industry and summary reports which are released each year as the compilations are completed. The summary reports for the **Manufacturing Industries** are listed below. A complete catalogue of publications of the Bureau is available on request from the Information Services Division, Dominion Bureau of Statistics, Ottawa, or from the Queen's Printer, Ottawa.

Catalogue number	Title	Price
<b>Annual</b>		
31-201	General Review of the Manufacturing Industries of Canada.....	2.00
31-202	Preliminary Statement of Manufactures .....	.75
31-203	Manufacturing Industries of Canada:	
31-203	Summary for Canada .....	.50
31-204	Atlantic Provinces .....	.50
31-205	Province of Quebec .....	.50
31-206	Province of Ontario .....	.50
31-207	Prairie Provinces .....	.50
31-208	Province of British Columbia, including Yukon and Northwest Territories.....	.50
31-209	The Manufacturing Industries of Canada, Geographical Distribution .....	1.50
31-210	Type of Ownership — Manufacturing Industries of Canada.....	.50
<b>Monthly</b>		
31-001	Inventories, Shipments and Orders in Manufacturing Industries .....	per year 4.00
65-004	Trade of Canada — Exports.....	per year 7.50
65-007	Trade of Canada — Imports .....	per year 7.50
<b>Semi-annual</b>		
31-002	New Manufacturing Establishments in Canada.....	per year 2.00

*Remittances should be in the form of cheque or money order,  
made payable to the Receiver General of Canada and forwarded to  
the Information Services Division, Dominion Bureau of Statistics,  
or to the Queen's Printer, Ottawa, Canada.*

## EXPLANATORY NOTES

This report is one in a series of about 130 publications which present the results of the 1958 Census of Manufactures. Most reports in this series refer to specific industries, but there are summary reports for Canada and the provinces and for major industry groups. An annual Census of Manufactures has been carried out by the Dominion Bureau of Statistics since 1916.

Industry statistics given in these reports refer to number of establishments, employees, salaries and wages, cost of materials, supplies, fuel and electricity, gross value of shipments, inventories and value added by manufacturing. Details of materials used and products shipped are also given. Descriptions of the principal industry statistics, with special reference to 1958, are as follows:

### Period Covered

Firms are asked to submit figures for the calendar year, if at all possible, and most reports are on this basis. Financial year reports for periods differing from the calendar year are accepted in instances where the firms find it impossible to supply calendar year data from accounting records. However the data on employees, salaries and wages are requested on a calendar year basis in all cases.

### Establishment

Data for the annual census is collected on an establishment basis. A firm with more than one plant is required to file a report for each plant. In most cases an establishment is a complete factory. Sometimes, however, a plant is divided into two or more establishments when it carries out operations classifiable to different industries and when separate accounting records are available. Usually the statistics for an establishment relate only to the manufacturing activities. Other activities such as construction at the plant by its own employees, wholesale or retail activities carried on at the plant location, etc., are not included. Plants engaged solely in repair work (except in the case of furniture, shipbuilding, boat building, aircraft and railway rolling stock industries) are not included but plants occupied in assembling parts into complete units are included.

### Employees

Administrative and office employees include all executives and supervisory officials such as presidents, vice-presidents, secretaries, treasurers, etc., together with managers, professional and technical employees, superintendents and factory supervisors above the working foremen level and clerical employees. Working owners and partners are also included in this category.

Production and related workers include all other factory workmen whether paid on a monthly, weekly, hourly or piece-work basis. Working foremen doing work similar to that of the employees they supervise are included, as are maintenance, warehousing and delivery staffs. Employees on new construction work, in retail or wholesale operations, on outside piece work etc., are not included.

Production workers are reported by months, an average for the year being obtained by summing the monthly figures and dividing by twelve. This procedure is followed even though the plant did not operate in all months. Figures on employment refer to calendar years whether or not some establishments reported other data on a financial year basis.

### Salaries and Wages

Salaries and wages refer to gross earnings of the employees described above, including salaries, wages, commissions, bonuses, the value of room and board where provided, deductions for income tax and social services such as sickness and unemployment insurance, pensions, etc., as well as any other allowances forming part of the employees' wages. Payments for overtime are included.

Salaries refer to amounts paid to administrative and office employees. Withdrawals by working owners or partners for normal living expenses for self and family are included but not their withdrawals for income tax. Wages refer to the amounts paid to production and related workers as defined above. Data on earnings refer to the calendar year whether or not some establishments reported other data on a financial year basis.

### Cost of Fuel and Electricity

Figures for fuel refer to amounts actually used, (including fuel used in cars and trucks), not to purchases unless the quantities are the same. Values refer to the laid-down cost at the works, including freight, duty, etc.

### Materials and Supplies Used

Figures represent quantities and laid-down cost values, at the works, of materials and supplies actually used during the year whether purchased from others or received as transfers from other plants of the reporting company. Amounts paid to other manufacturers for work done on materials owned by the reporting company are included. Returnable containers or any other items charged to capital account are not included. Fuels are not included. Goods bought from others or received as transfers from other plants of reporting companies

for resale without further processing are not included. Maintenance and repair supplies not chargeable to capital account are included.

### Factory Shipments

Factory shipments refer to shipments of goods made from own materials either in the reporting plant or by other manufacturers on the basis of a charge to the reporting plant for work done. All products and by-products shipped from the establishment are included whether for domestic use, export, or for government departments. Transfer shipments to sales outlets, distributing warehouses or to other manufacturing units of the reporting firm are included. Goods bought or received as transfers and resold without further processing are not included. Values are computed on f.o.b. plant or plant warehouse basis, and do not include sales tax or excise duties. Values of containers not returnable are included. Amounts received in payment for work done on materials owned by others are included.

In a few industries such as shipbuilding, aircraft, etc., where work on principal products extend over a relatively long period, the value of production is recorded rather than the value of shipments. For those industries production is computed from the value of deliveries of complete units during the year plus the value of work done during the year on unfinished units less the value of work done in previous years on finished units delivered in the year under review.

### Inventories

Values represent the book values of manufacturing inventories owned and held at the reporting plant. Figures include inventories held in warehouses or selling outlets which have been included with plant operations for purposes of reporting shipments.

### Value Added by Manufacturing

Figures are computed from value of shipments plus or minus changes in inventories of finished

goods and goods in process less cost of materials, fuel and electricity. This figure is sometimes referred to as net production.<sup>1</sup>

### Standard Industrial Classification

The Standard Industrial Classification Manual, prepared by the Dominion Bureau of Statistics, provides for 135 three-digit industries in the manufacturing sector, arranged in 17 major groups. Reporting establishments are classified or allotted to specific industries on the basis of the value of principal products made or shipped.

### Short Forms

Prior to 1949 all manufacturing firms, regardless of size, were required to complete a standard form annually covering all census details, but for later years an effort was made to ease the reporting burden for smaller firms which usually do not maintain regular records in the required detail. A modified or short form was introduced in 1949 asking for the total value of shipments only, or in industries with a large number of small firms, for total value of shipments and quantities and values of a few principal products. Using the ratio of value of shipments in the current year to value of shipments in the base year, 1948, estimates of other census data were made for each plant for inclusion in the regular compilations. In general, the cut-off point for short forms was set at \$50,000 gross value of shipments annually, but there were lower cut-offs for a number of industries in which the small firms accounted for a larger share of total shipments. About 40 per cent of the total number of establishments reported on the modified or short form. They accounted for less than 3 per cent of the total value. In 1958, to establish a new base year, the small firms were again asked to report data on employees, salaries and wages, and other principal statistics together with some detail on material and products.

<sup>1</sup> To arrive at the National Accounts concept of "gross domestic product at factor cost", it would be necessary to subtract also the cost of office supplies used, advertising, insurance and other goods and services obtained from other businesses. Data on these inputs are not collected on the annual Census of Manufactures. Value added figures for "The primary industries and construction" are published in D.B.S. publication 61-202, *Survey of Production*.

# THE MANUFACTURING INDUSTRIES OF CANADA

## Section B

### ATLANTIC PROVINCES

1958

The Atlantic Provinces are of economic importance in a number of fields, such as pulp and paper, fish processing, sawmills, petroleum products and primary iron and steel. In Newfoundland manufacturing production is dominated by the forest and fisheries resources. Pulp and paper was the most important industry in 1958 with shipments valued at \$61,003,231, followed by fish processing with \$15,661,753. These two industries accounted for 66 per cent of the total production of the Province. In Prince Edward Island agriculture and fishing resources make butter and cheese, slaughtering and meat packing, and fish processing the leading industries. Nova Scotia is renowned for its coal mines and its fisheries as well as extensive forests and agricultural lands and is favoured with easy access by sea to the highgrade iron-ore supply of Newfoundland. On these resources are based the leading manufactures of primary iron and steel, fish processing, pulp and paper, shipbuilding and sawmills. In addition, an important petroleum refinery, railway rolling stock, coke and gas, miscellaneous iron and steel and aircraft plants add to the diversification of the Province. The forests of New Brunswick give a leading place to its pulp and paper and sawmilling industries. Other important manufacturing and processing activities are based on fish and agricultural resources. There are also a number of metal working industries, such as heating and cooking apparatus, brass and copper products, etc.

Nova Scotia and New Brunswick, despite the lack of large rivers, have valuable sources of hydraulic power, a considerable portion of which has been developed. Tentative estimates give Newfoundland a potential of 1,600,000 h.p. at ordinary minimum flow, while in Labrador, the Hamilton River is outstanding as a potential source of power. Turbine installation at the end of 1958 totalled 370,570 h.p. in Newfoundland, 1,882 in Prince Edward Island, 182,898 in Nova Scotia and 254,130 in New Brunswick. Compared with Quebec, Ontario and British Columbia, the installed power in the Atlantic Provinces, is very small, amounting to 809,480 h.p. This compares with a total of 1,196,745 h.p. in the Prairie Provinces and 22,376,048 h.p. in the whole of Canada.

Manufacturing establishments reporting in 1958 numbered 3,183 for the Atlantic Provinces as a whole. These plants furnished employment to 60,990 persons who were paid \$179,706,278 in salaries and wages. They also shipped goods with a selling value at the factory of \$867,817,992 and spent \$459,184,326 for materials, while the value added by manufacture totalled \$372,976,981.

Considering the Atlantic Provinces as an economic unit, pulp and paper was the leading industry in 1958 with factory shipments valued at \$177,110,505. Fish processing and packing with factory shipments valued at \$84,801,250 was in second place. Other leading industries, in order of importance and with shipments exceeding \$30,000,000, were: petroleum products, primary iron and steel, sawmills and sugar refining. These six industries accounted for 55 p.c. of the total value of factory shipments of the Atlantic Region. Other leading industries with shipments of \$10 to \$30 million and in order of importance were: butter and cheese, railway rolling stock, slaughtering and meat packing, bread and other bakery products, shipbuilding and repairs, miscellaneous food preparations, sash, door and planing mills, printing and publishing, breweries, prepared stock and poultry feeds, carbonated beverages and coke and gas.

For the Atlantic Provinces as a whole there was a drop of 5.7 p.c. in the number of persons employed and 1.6 p.c. in the value of factory shipments in 1958 as compared with the previous year. Most of the industries producing consumer goods reported increased shipments in 1958 as compared with 1957. Of the industries with shipments of over \$10 million, prepared stock and poultry feeds had the highest increase of 12.8 p.c., followed by breweries with an increase of 11.1 p.c., carbonated beverages 10.9 p.c., slaughtering and meat packing 8.5 p.c., printing and publishing 5.9 p.c., sash, door and planing mills 5.5 p.c., butter and cheese 4.9 p.c., fish processing 4.5 p.c., miscellaneous food preparations 2.7 p.c., bread and other bakery products 2.0 p.c. and petroleum products 1.9 p.c. Three of the consumer goods industries in this group reported decreased shipments, these were, pulp and paper, sugar refining and coke and gas. The industries manufacturing producer or durable goods reported substantial declines in value of shipments. Railway rolling stock was down 22.5 p.c., shipbuilding and repairs 19.5 p.c., sawmills 15.6 p.c. and primary iron and steel 0.6 p.c. Miscellaneous iron and steel products which in 1957 had shipments of over \$10 million reported a severe decline in 1958, its value of shipments dropping below the \$10 million mark.

In the Atlantic region the program of industrial development has been more selective than in some of the other provinces. Fish processing, new sawmills, increased pulp-making capacity and the manufacture of non-metallic building materials like cement and gypsum products have accounted for well over half of the industrial growth. There are however, a few outstanding exceptions. Two sizeable

defence plants have been established in Nova Scotia, one to repair and overhaul naval aircraft and the other to build and repair radar and related electronic equipment. Considerable development has taken place in Newfoundland. Besides plants for the manufacture of cement and gypsum wallboard and plaster, factories for producing boots and shoes, birch veneer, leather goods, industrial machinery

and a leather tannery were established, thus broadening the industrial base of the province. With these exceptions, most of the developments in the Atlantic Provinces have been either small and scattered or confined to the modernization and expansion of manufacturing facilities that were already established at the close of World War II.

Principal Statistics of the Atlantic Provinces, 1958

Province	Estab- lish- ments	Employees	Salaries and wages	Cost at plant of materials used	Value added by manufacture	Selling value of factory shipments
	number			thousands of dollars		
Newfoundland .....	768	9,604	29,234	52,156	58,045	116,979
Prince Edward Island .....	179	1,632	3,390	19,203	7,266	26,888
Nova Scotia .....	1,297	29,010	86,005	217,264	176,998	411,929
New Brunswick .....	939	20,744	61,077	170,561	130,668	312,022
<b>Totals .....</b>	<b>3,183</b>	<b>60,990</b>	<b>179,706</b>	<b>459,184</b>	<b>372,977</b>	<b>867,818</b>

In spite of the rapid development in the Atlantic provinces since 1949 manufacturing production did not quite keep pace with the development in the more industrialized provinces of Ontario, Quebec and British Columbia. This is indicated by the drop in the Atlantic Provinces' share of the Canadian total from 4.52 in 1949 to 3.92 in 1958. In number of persons employed there was a decrease 4.6 per cent for the Atlantic Provinces as compared with an increase of 9.9 per cent for Canada as a whole. For salaries and wages paid the increase was 50.7 per cent as compared with 85.1 per cent for Canada, and in selling value of factory shipments the increase was 50.8 per cent for the Atlantic Provinces and 77.5 per cent for Canada as a whole. The increased employment since 1949 reported by Newfoundland was offset by the major decline of 11.5 p.c. in New Brunswick and minor declines in Prince Edward Island and Nova Scotia, resulting in

a net decrease of 4.6 p.c. for the Atlantic Region as compared with an increase of 9.9 p.c. for Canada as a whole.

As mentioned previously, the drop in manufacturing employment in 1958 over 1957 in the Atlantic Provinces was 5.7 p.c., accompanied by a decrease of only 1.6 p.c. in the selling value of factory shipments. This compares with a decrease of 5.0 p.c. in employment and 0.1 p.c. in factory shipments for Canada as a whole. All provinces reported lower employment, ranging from 8.3 p.c. for Newfoundland to 1.1 p.c. for New Brunswick. In value of factory shipments the trend was varied. Nova Scotia reported a drop of 3.6 p.c. while Prince Edward Island reported an increase of 7.8 p.c. Newfoundland was fractionally lower while New Brunswick was fractionally higher.

Variation in Employment and Factory Shipments, 1958 Compared with 1949

Province	Employees	Salaries and wages	Selling value of factory shipments
	per cent		
Newfoundland <sup>1</sup> .....	+ 4.0	+62.6	+49.5
Prince Edward Island .....	- 6.6	+58.9	+48.4
Nova Scotia .....	- 0.7	+57.3	+66.4
New Brunswick .....	-11.5	+38.1	+34.8
<b>Atlantic Provinces .....</b>	<b>- 4.6</b>	<b>+50.7</b>	<b>+50.8</b>
<b>Canada .....</b>	<b>+ 9.9</b>	<b>+85.1</b>	<b>+77.5</b>

<sup>1</sup> Exclusive of fish processing.

TABLE 1. Principal Statistics of the Manufacturing Industries of Canada by Provinces, 1958

Provinces	Estab- lish- ments	Employees	Salaries and wages	Cost at plant of materials used	Value added by manufacture <sup>1</sup>	Selling value of factory shipments
	number			dollars		
Newfoundland .....	768	9,604	29,233,569	52,156,291	58,044,514	116,979,200

<b>Canada .....</b>	<b>36,741</b>	<b>1,289,602</b>	<b>4,802,496,260</b>	<b>11,821,567,471</b>	<b>9,792,505,931</b>	<b>22,163,186,308</b>

<sup>1</sup> Calculated value of production (shipments plus closing inventory, minus opening inventory of goods in process and finished goods) less cost of materials, fuel and electricity used.

## SUBSECTION 1

---

PROVINCE OF NEWFOUNDLAND

TABLE 2. Principal Statistics of the Manufacturing Industries of Newfoundland, 1949-58

Year	Estab- lish- ments	Employees	Salaries and wages	Cost at plant of materials used	Value added by manufacture <sup>1</sup>	Gross value of products <sup>2</sup>
	number		dollars			
1949 <sup>3</sup>	793	6,934	15,486,336	31,228,173	32,918,776	67,264,282
1950 <sup>3</sup>	850	6,682	16,246,252	31,505,623	36,712,377	71,062,850
1951	822	9,622	22,681,246	42,117,299	53,690,187	100,642,613
1952	948	10,303	25,233,851	45,477,620	56,109,014	105,459,684
1953	939	10,575	26,604,908	44,972,021	57,784,697	106,524,603
1954	790	9,892	30,101,186	46,503,032	59,483,922	109,567,770
1955	785	10,361	28,604,468	49,914,856	60,586,922	115,579,036
1956	783	10,502	30,462,735	55,451,956	62,607,709	123,691,344
1957	916	10,473	32,783,715	53,995,122	56,543,792	117,713,795
1958	768	9,604	29,233,569	52,156,291	58,044,514	116,979,200

<sup>1</sup> In 1951 and the previous years the value added by manufacture was computed by subtracting the cost of fuel, electricity and materials used from the gross value of products and in 1952 and 1953 from the value of factory shipments. In 1954 and subsequent years the deduction was made from the calculated value of production. In 1954 and 1955 the value of production was obtained by adjusting shipments for inventory change of finished goods only, while in 1956 and subsequent years adjustments were made for both goods in process and finished goods. The figures for value added for 1956 and subsequent years are, therefore, comparable with 1951 and earlier years.

<sup>2</sup> In 1952 and subsequent years the basis of collection is "Value of factory shipments" instead of "Gross value of products".

<sup>3</sup> Exclusive of fish processing.

TABLE 3. Principal Statistics Compared, 1957 and 1958
