Price: 50 cents

PUBLICATIONS

The results of the annual Census of Industry are published by the Dominion Bureau of Statistics in a series of industry and summary reports which are released each year as the compilations are completed. The summary reports for the **Manufacturing Industries** are listed below. A complete catalogue of publications of the Bureau is available on request from the Information Services Division, Dominion Bureau of Statistics, Ottawa, or from the Queen's Printer, Ottawa.

EXPLANATORY NOTES

This report is one in a series of about 130 publications which present the results of the 1959 Census of Manufactures. Most reports in this series refer to specific industries, but there are summary reports for Canada and the provinces and for major industry groups. An annual Census of Manufactures has been carried out by the Dominion Bureau of Statistics since 1916.

Industry statistics given in these reports refer to number of establishments, employees, salaries and wages, cost of materials, supplies, fuel and electricity, gross value of shipments, inventories and value added by manufacturing. Details of materials used and products shipped are also given. Descriptions of the principal industry statistics, with special reference to 1959 are as follows:

Period Covered

Firms are asked to submit figures for the calendar year, if at all possible, and most reports are on this basis. Financial year reports for periods differing from the calendar year are accepted in instances where the firms find it impossible to supply calendar year data from accounting records. However the data on employees, salaries and wages are requested on a calendar year basis in all cases.

Establishment

Data for the annual census is collected on an establishment basis. A firm with more than one plant is required to file a report for each plant. In most cases an establishment is a complete factory. Sometimes, however, a plant is divided into two or more establishments when it carries out operations classifiable to different industries and when separate accounting records are available. Usually the statistics for an establishment relate only to the manufacturing activities. Other activities such as construction at the plant by its own employees, wholesale or retail activities carried on at the plant location, etc., are not included. Plants engaged solely in **repair** work (except in the case of furniture, shipbuilding, boat building, aircraft and railway rolling stock industries) are not included but plants occupied in assembling parts into complete units are included.

Employees

Administrative and office employees include all executives and supervisory officials such as presidents, vice-presidents, secretaries, treasurers, etc., together with managers, professional and technical employees, superintendents and factory supervisors above the working foremen level and clerical employees. Working owners and partners are also included in this category.

Production and related workers include all other factory workmen whether paid on a monthly, weekly, hourly or piece-work basis. Working foremen doing work similar to that of the employees they supervise are included, as are maintenance, warehousing and delivery staffs. Employees on new construction work, in retail or wholesale operations, on outside piece work etc., are not included.

Production workers are reported by months, an average for the year being obtained by summing the monthly figures and dividing by twelve. This procedure is followed even though the plant did not operate in all months. Figures on employment refer to calendar years whether or not some establishments reported other data on a financial year basis.

Salaries and Wages

Salaries and wages refer to gross earnings of the employees described above, including salaries, wages, commissions, bonuses, the value of room and board where provided, deductions for income tax and social services such as sickness and unemployment insurance, pensions, etc., as well as any other allowances forming part of the employees' wages. Payments for overtime are included.

Salaries refer to amounts paid to administrative and office employees. Withdrawals by working owners or partners for normal living expenses for self and family are included but not their withdrawals for income tax. Wages refer to the amounts paid to production and related workers as defined above. Data on earnings refer to the calendar year whether or not some establishments reported other data on a financial year basis.

Cost of Fuel and Electricity

Figures for fuel refer to amounts actually used, (including fuel used in cars and trucks), not to purchases unless the quantities are the same. Values refer to the laid-down cost at the works, including freight, duty, etc.

Materials and Supplies Used

Figures represent quantities and laid-down cost values, at the works, of materials and supplies actually used during the year whether purchased from others or received as transfers from other plants of the reporting company. Amounts paid to other manufacturers for work done on materials owned by the reporting company are included. Returnable containers or any other items charged to capital account are not included. Fuels are not included. Goods bought from others or received as transfers from other plants of reporting companies for resale without further processing are not included. Maintenance and repair supplies not chargeable to capital account are included.

Factory Shipments

Factory shipments refer to shipments of goods made from own materials either in the reporting plant or by other manufacturers on the basis of a charge to the reporting plant for work done. All products and by-products shipped from the establishment are included whether for domestic use, export, or for government departments. Transfer shipments to sales outlets, distributing warehouses or to other manufacturing units of the reporting firm are included. Goods bought or received as transfers and resold without further processing are not included. Values are computed on f.o.b. plant or

plant warehouse basis, and do not include sales tax or excise duties. Values of containers not returnable are included. Amounts received in payment for work done on materials owned by others are included.

In a few industries such as shipbuilding, aircraft, etc., where work on principal products extend over a relatively long period, the value of production is recorded rather than the value of shipments. For those industries production is computed from the value of deliveries of complete units during the year plus the value of work done during the year on unfinished units less the value of work done in previous years on finished units delivered in the year under review.

Inventories

Values represent the book values of manufacturing inventories owned and held at the reporting plant. Figures include inventories held in warehouses or selling outlets which have been included with plant operations for purposes of reporting shipments.

Value Added by Manufacturing

Figures are computed from value of shipments plus or minus changes in inventories of finished goods and goods in process less cost of materials, fuel and electricity. This figure is sometimes referred to as net production.¹

Standard Industrial Classification

The Standard Industrial Classification Manual, prepared by the Dominion Bureau of Statistics, provides for 135 three-digit industries in the manufacturing sector, arranged in 17 major groups. Reporting establishments are classified or allotted to specific industries on the basis of the value of principal products made or shipped.

Short Forms

Between 1949 and 1957, in an effort to ease the reporting burden for smaller firms, a short form was used asking for the total value of shipments only or, in a few cases where losses of detail were significant, for quantities and values of principal products. For purposes of publication, missing data were estimated on the basis of appropriate ratios. In general the cut-off point for these short forms was set at \$50,000 value of shipments. About 40% of the total number of establishments reported on the short form and accounted for less than 3 per cent of the total value of shipments.

In 1958, in order to establish a new base year, the small firms were asked to report all items of principal statistics together with some detail on materials and products.

¹ To arrive at the National Accounts concept of "gross domestic product at factor cost", it would be necessary to subtract also the cost of office supplies used, advertising, insurance and other goods and services obtained from other businesses. Data on these inputs are not collected on the annual Census of Manufactures. Value added figures for "The primary industries and construction" are published in D.B.S. publication 61-202, *Survey of Production*.

For the 1959 Census, the short form was used again, but further steps were taken to ease the respondents' burden. First, the general limit for short forms was raised to \$100,000 value of shipments. In addition, a new intermediate form was developed. This form is a shortened version of the long form in that most of the general questions were pared down and the detailed lists of materials and products were limited to the more important items. The general limits for firms in this category were set at between \$100,000-\$500,000 value of shipments, but in the case of both the short and intermediate forms there were lower cut-offs for a number of industries in which the smaller firms accounted for a larger share of total shipments. On the other hand, limits were raised where this could be done without a significant loss of coverage. On most of the short forms for 1959, in addition to total value of shipments, data on principal products were requested. In a few industries, where loss of employment and earnings data were considered too large because of higher cut-offs, a question on total payroll was placed on the short form.

The intermediate and long forms provide complete data for the compilation of all elements of principal industry statistics and the details of materials and products. The one-page short form, although containing data on principal products and total value of shipments, does not request information on other elements of principal statistics such as value of inventories, materials, fuel and electricity and, in most cases, employment and salaries and wages, nor does it contain detailed data on volume and value of materials used. For purposes of compiling aggregates of principal statistics by industry and by geographic location, the missing data for each establishment were estimated for 1959 by using, in general, ratios based on the change in the value of shipments between 1958 and 1959. The proportion of the estimated data was generally less than 5 per cent of the total in each category of principal statistics.

The general request for the principal items of products on the short form for 1959 permitted a fairly complete compilation of the detailed quantities and values of commodity shipments. In the case of the detailed quantities and values of materials, fuel and electricity, however, and the monthly distribution of production workers, only the totals of data actually reported on the intermediate and long forms are contained in published reports and no attempt was made as in past years to estimate the generally small proportion of individual totals represented by detailed items omitted from the short forms.

The new approach has relieved an additional 12,000 establishments from filling out the regular long form. Establishments now receiving the short form number in excess of 20,000 and account for more than 54 per cent of the total number of establishments and a little more than 3 per cent of the total value of shipments.

THE MANUFACTURING INDUSTRIES OF CANADA

Section B

ATLANTIC PROVINCES

1959

The Atlantic Provinces are of economic importance in a number of fields, such as pulp and paper, fish processing, sawmills, petroleum products and primary iron and steel. In Newfoundland manufacturing production is dominated by the forest and fisheries resources. Pulp and paper was the most important industry in 1959 with shipments valued at \$62,508,058, followed by fish processing with \$15,208,918. These two industries accounted for 65 per cent of the total production of the Province. In Prince Edward Island agriculture and fishing resources make butter and cheese, slaughtering and meat packing, and fish processing the leading industries. Nova Scotia is renowned for its coal mines and its fisheries as well as extensive forests and agricultural lands and is favoured with easy access by sea to the highgrade iron-ore supply of Newfoundland. On these resources are based the leading manufactures of primary iron and steel, fish processing, pulp and paper, shipbuilding and sawmills. In addition, an important petroleum refinery, railway rolling stock, coke and gas, knitted goods, confectionery, miscellaneous iron and steel and aircraft plants add to the diversification of the Province. The forests of New Brunswick give a leading place to its pulp and paper and sawmilling industries. Other important manufacturing and processing activities are based on fish and agricultural resources. There are also a number of metal working industries, such as heating and cooking apparatus, brass and copper products, etc.

Nova Scotia and New Brunswick, despite the lack of large rivers, have valuable sources of hydraulic power, a considerable portion of which has been developed. Tentative estimates give Newfoundland a potential of 1,600,000 h.p. at ordinary minimum flow, while in Labrador, the Hamilton River is outstanding as a potential source of power. Turbine installation at the end of 1959 totalled 370,135 h.p. in Newfoundland, 1,660 in Prince Edward Island, 183,168 in Nova Scotia and 254,875 in New Brunswick. Compared with Quebec, Ontario and British Columbia, the installed power in the Atlantic Provinces, is very small, amounting to 809,838 h.p. This compares with a total of 1,220,330 h.p. in the Prairie Provinces and 24,888,426 h.p. in the whole of Canada.

Manufacturing establishments reporting in 1959 numbered 3,204 for the Atlantic Provinces as a whole. These plants furnished employment to 60,484 persons who were paid \$185,904,378 in salaries and wages. They also shipped goods with

a selling value at the factory of \$870,820,344 and spent \$475,029,569 for materials, while the value added by manufacture totalled \$360,533,039.

Considering the Atlantic Provinces as an economic unit, pulp and paper was the leading industry in 1959 with factory shipments valued at \$180,450,818. Fish processing and packing with factory shipments valued at \$87,733,137 was in second place. Other leading industries, in order of importance and with shipments exceeding \$30,000,000, were: petroleum products, primary iron and steel, sawmills and butter and cheese. These six industries accounted for 53 p.c. of the total value of factory shipments of the Atlantic Region. Other leading industries with shipments of \$10 to \$30 million and in order of importance were: sugar refining, slaughtering and meat packing, bread and other bakery products, railway rolling stock, shipbuilding and repairs, miscellaneous food preparations, sash door and planing mills, printing and publishing, breweries, prepared stock and poultry feeds, carbonated beverages, coke and gas products and milk pasteurizing.

For the Atlantic Provinces as a whole there was an increase of 0.3 p.c. in the value of factory shipments, but a drop of 0.8 p.c. in the number of persons employed in 1958 as compared with the previous year. Most of the industries producing consumer goods reported increases in the value of shipments in 1959 as compared with 1958. Of the industries in this category with shipments of over \$10 million, coke and gas products reported the highest increase of 13.8 p.c., followed by breweries with 10.0 p.c., carbonated beverages 7.6 p.c., prepared stock and poultry feeds 5.6 p.c., butter and cheese 3.9 p.c., bread and other bakery products 3.9 p.c., fish processing 3.4 p.c., miscellaneous food preparations 2.9 p.c., printing and publishing 2.7 p.c., pulp and paper 1.9 p.c. and slaughtering and meat packing 0.2 p.c. Two industries in this category had lower shipments, viz sugar refining and petroleum products. The drop, in the value of shipments of the petroleum products industry is due largely to a change in the method of reporting unit values which were at a lower level than used in previous years. The drop in the value of shipments of 24 p.c. is consequently much greater than the drop in the volume of products shipped. The trend in the value of shipments reported by the industries producing durable goods was mixed. Two industries in the \$10 million and over classification reported

increased shipments, sawmills 19.4 p.c. and primary iron and steel 1.7 p.c., while two other industries reported lower values of production. The value of production reported by the railway rolling stock industry was 13.1 p.c. lower while that of shipbuilding and repairs was 4.5 p.c. lower. Miscellaneous iron and steel products which in 1957 had shipments of over \$10 million reported severe declines in 1958 and 1959, its value of shipments dropping below the \$10 million mark.

In the Atlantic region the program of industrial development has been more selective than in some of the other provinces. Fish processing, new sawmills, increased pulp-making capacity and the manufacture of non-metallic building materials like cement and gypsum products have accounted for

well over half of the industrial growth. There are however, a few outstanding exceptions. Two sizeable defence plants have been established in Nova Scotia, one to repair and overhaul naval aircraft and the other to build and repair radar and related electronic equipment. Considerable development has taken place in Newfoundland. Besides plants for the manufacture of cement and gypsum wallboard and plaster, factories for producing boots and shoes, birch veneer, leather goods, industrial machinery and a leather tannery were established, thus broadening the industrial base of the province. With these exceptions, most of the developments in the Atlantic Provinces have been either small and scattered or confined to the modernization and expansion of manufacturing facilities that were already established at the close of World War II.

Principal Statistics of the Atlantic Provinces, 1959

| Province | Estab-lish-ments | Employees | Salaries and wages | Cost at plant of materials used | Value added by manufacture | Selling value of factory shipments |
|----------------------------|------------------|---------------|--------------------|---------------------------------|----------------------------|------------------------------------|
| | number | | | thousands of dollars | | |
| Newfoundland | 797 | 9,620 | 30,481 | 54,002 | 57,755 | 119,007 |
| Prince Edward Island | 178 | 1,769 | 3,856 | 19,947 | 7,391 | 27,671 |
| Nova Scotia | 1,314 | 28,168 | 87,694 | 223,016 | 161,452 | 398,663 |
| New Brunswick | 915 | 20,927 | 63,873 | 178,065 | 133,935 | 325,479 |
| Totals | 3,204 | 60,484 | 185,904 | 475,030 | 360,533 | 870,820 |

In spite of the rapid development in the Atlantic Provinces since 1949 manufacturing production did not keep pace with the development in the more industrialized provinces of Ontario, Quebec and British Columbia. This is indicated by the drop in the Atlantic Provinces' share of the Canadian total from 4.52 in 1949 to 3.74 in 1959. In number of persons employed there was a decrease of 5.6 p.c. for the Atlantic Provinces as compared with an increase of 11.3 p.c. for Canada as a whole. For salaries and wages paid the increase was 56.2 p.c. as compared with 95.7 p.c. for Canada, and in selling value of factory shipments the increase was 51.6 p.c. for the Atlantic Provinces and 86.8 p.c. for Canada as a whole. The increased employment since 1949 reported by Newfoundland and Prince Edward Island was more than offset by the major declines of 12.0 p.c. in New Brunswick and 4.1 p.c. in Nova Scotia, resulting in a net decrease of 5.6

p.c. for the Atlantic Region as compared with an increase of 11.3 p.c. for Canada as a whole.

As mentioned previously, the drop in manufacturing employment in 1959 over 1958 in the Atlantic Provinces was 0.8 p.c., accompanied by an increase of 0.3 p.c. in the selling value of factory shipments. This compared with an increase of 1.1 p.c. in employment and 5.2 p.c. in factory shipments for Canada as a whole. All provinces, with the exception of Nova Scotia, reported higher employment figures, ranging from 0.2 p.c. for Newfoundland to 8.4 p.c. for Prince Edward Island. The drop in employment in Nova Scotia was 2.9 p.c. In value of factory shipments the trend was similar. There was an increase of 4.0 p.c. in New Brunswick, 2.9 p.c. in Prince Edward Island and 1.7 p.c. in Newfoundland, while in Nova Scotia the decline was 3.2 p.c.

Variation in Employment and Factory Shipments, 1959 Compared with 1958 and 1949

| Province | 1959 compared with 1949 | | | 1959 compared with 1958 | | |
|---------------------------------|-------------------------|--------------------|------------------------------------|-------------------------|--------------------|------------------------------------|
| | Employees | Salaries and wages | Selling value of factory shipments | Employees | Salaries and wages | Selling value of factory shipments |
| | per cent | | | | | |
| Newfoundland | + 5.5 ¹ | +71.8 ¹ | +54.3 ¹ | +0.2 | + 4.3 | +1.7 |
| Prince Edward Island | + 1.3 | +80.7 | +52.7 | +8.4 | +13.7 | +2.9 |
| Nova Scotia | - 4.1 | +60.3 | +61.0 | -2.9 | + 2.0 | -3.2 |
| New Brunswick | -12.0 | +44.4 | +40.6 | +0.9 | + 4.6 | +4.0 |
| Atlantic Provinces | - 5.6 | +56.2 | +51.6 | -0.8 | + 3.4 | +0.3 |
| Canada | +11.3 | +95.7 | +86.8 | +1.1 | + 5.6 | +5.2 |

¹ Exclusive of fish processing.

| 1955 | 785 | 10,361 | 28,604,468 | 49,914,856 | 60,586,922 | 115,579,036 |
| 1956 | 783 | 10,502 | 30,462,735 | 55,451,956 | 62,607,709 | 123,691,344 |
| 1957 | 916 | 10,473 | 32,783,715 | 53,995,122 | 56,543,792 | 117,713,795 |
| 1958 | 768 | 9,604 | 29,233,569 | 52,156,291 | 58,044,514 | 116,979,200 |
| 1959 | 797 | 9,620 | 30,481,291 | 54,001,782 | 57,754,510 | 119,007,053 |

¹ In 1951 and the previous years the value added by manufacture was computed by subtracting the cost of fuel, electricity and materials used from the gross value of products and in 1952 and 1953 from the value of factory shipments. In 1954 and subsequent years the deduction was made from the calculated value of production. In 1954 and 1955 the value of production was obtained by adjusting shipments for inventory change of finished goods only, while in 1956 and subsequent years adjustments were made for both goods in process and finished goods. The figures for value added for 1956 and subsequent years are, therefore, comparable with 1951 and earlier years.

² In 1952 and subsequent years the basis of collection is "Value of factory shipments" instead of "Gross value of products".

³ Exclusive of fish processing.

TABLE 3. Principal Statistics Compared, 1958 and 1959

| Principal statistics | 1958 | 1959 | +Increase -Decrease |
|--|-------------|-------------|------------------------|
| Establishments..... No. | 768 | 797 | + 29 |

¹ See footnote 1, Table 1, page 9.

² Publication of these figures was authorized by the firms concerned.

³ Reported on a production basis.

⁴ Includes: Dairy products, n.e.s.; Cement, hydraulic; Gypsum products; Miscellaneous food preparations; Paints, varnishes and lacquers; Railway rolling stock; Slaughtering and meat packing and Machinery, industrial.
