# Monthly Report <br> of the <br> PRODUCTION OF IRON AND STEEL <br> IN CANADA 

## JULY, 1921

PIG IRON AND FERRO-ALLOYS

The total output of pig iron and ferro-alloys during July showed an increase of more than two thousand tons over the production reported bj th Dominion Bureau of Statistics for June. Pig iron output remained steady at slightly over fifty-four thousand tons, but the production of the several srades varifd considerably from the amounts reported for the preceaing month Basic iron declined from 48.870 long tons in June to 40,720 tons in July, all of which was produced by the makers for their cwin use Foundry iron which showed a total of 5,214 tons in Juns was nearly double, at $10,{ }^{2} 39$ tons $1 n$ July. Of this amount 9,135 tons was used by tie makers, and the balance, $1,204 \mathrm{t}$ ns was produced for sale. Tru ratio of foundry iron produced for use to the amount made for sale was, therefore, eight, to one in July, while in the preceding month the ratio was one to five. There was a marked increase in the mroduction of malleable aron during the month, the output rising from 661 tons made in June for sale to 2,022 tons made during July for the use of the producing firms. Blectric iron castings showed an advance aver the previous month's record, the figures for the two months being 67 tons in June and 105 tons in July of the entire output of pig iron over $90 \%$ was reported as having beer made for the further use of the companies producing

The production of spiegeleisen was resumed in July and a total of 2,830 lone tors was made for further use

Other ferro-alloys, consisting entirely of the several grades of ferro-3ilicon amunted to 659 tons during the month, all of which was made ir electric furnaces and procuced for sale.

There were no clianges during ths month in the number of blaat furnaces active, the six furnaces reported in blast at the end of June being kept in operation throughout the month. At the close of tha month, therefore, $31 \%$ urnaces mere active, nam:ly, three at Sault 3ts. Marie, one at Hamilton and two at Sydney

Table 1 (a) showe the production of pig iron ky grades and ferroalloys durdit the month. For comarison Table $1(b)$ shows the corresponing data for i.e month of Junc, and Table 1 (c) shows the total output for the sever: menthe of the calendar year to cate
