PRODUCTION OF IRON AND STEEL

in Canada

MAY 1930

Published by Authority of the HON. JAMES MALCOLM, M. P., Minister of Trade and Commerce. Figures in this report are the livest available as time of printing, where necessary, data for earlier months have been revised.

DOMINION BUREAU OF STATISTICS, CANADA DOMINION STATISTICIAN - R. H. COATS. B. A., F. S. S. (HON)., F.R.S.C.

W. H. LOSEE. B. Sc., -- Chief of the MINING, METALLURGICAL AND CHEMICAL BRANCH

PRODUCTION OF IRON AND STEEL IN CANADA

MAY 1930

PIG IRON.— Production of pig iron in Canada during May at 80,505 long tons was 11 per cent higher than the total of 72,339 tons in April and only 1 per cent below the output of 81,464 tons for May of last year, according to a statement issued by the Dominion Bureau of Statistics at Ottawa. The increase in May over April was at the rate of 187 tons a day to make an average daily output of 2,597 tons; this daily rate was the second highest for any month of the year to date, being only exceeded by the January average of 2,809 tons per day.

The gain in May was due entirely to an increase in the production of malleable iron as the tonnage of foundry iron remained about stationary and basic iron showed a slight decline. Output of malleable iron rose sharply to 12,636 tons from 1,826 tons in April; foundry iron at 11,387 tons showed little change from the 11,175 tons in the previous month, and basic iron dropped to 56,462 tons from 59,338 tons.

Furnace charges for the month of May included 145,087 long tons of imported iron ore, 41,112 short tons of limestone and 82,062 short tons of coke. Of the limestone 12,104 tons were mined in Canada, and of the coke 72,825 tons were made in Canada, 19,105 tons being made from Canadian coal.

On the first of May, one 350 ton furnace was lighted at Port Colborne, Ontario, and on May sixth one 300 ton furnace at Sydney, N.S., was blown out. This resulted in six furnaces being active on May 31, the same as on April 30. The active furnaces had a total capacity of 2,425 long tons per day, or 58 per cent of the total capacity of all iron blast furnaces in Canada and were located as follows: 2 at Sault Ste. Marie, Ont.; 2 at Hamilton, Ont.; 1 at Sydney, N.S.; and 1 at Port Colborne, Ont.

For the five months ending May 31, 1930, production aggregated 385,105 tons, a decline of 10 per cent from the total of 428,684 tons reported for the corresponding period of 1929 which in turn was 16 per cent greater than the 370,634 tons made during the first five months of 1928. This year's output to date included 273,214 tons of basic tron, 72,517 tons of foundry iron and 39,374 tons of malleable iron.

FERRO-ALLOYS. Production of ferro-alloys in Canada amounted to 7,766 tons in May as compared with 7,939 in April. Output for the month under review consisted mostly of ferrosilicon and ferroomanganess; a small tonnage of spiegeleisen was made.

STEEL INGOTS AND CASTINGS. - Production of steel ingots and direct steel castings in Canada during May at 91,692 tons was the lowest tonnage reported for any month of the year to date being 11 per cent under the 102,681 tons of the previous month and 25 per cent less than the 126,372 tons made in May of a year ago. The decline from April was mostly accounted for by steel ingots dropping to 86,040 tons from 95,095 tons while steel castings also fell off slightly to 5,652 tons from 7,586 tons.

For the five months ending May 31, 1930, the cumulative production at 533,672 tons was 14 per cent lower than the 619,337 tons reported for the first five months of 1929 which in turn was 17 per cent over the 531,808 tons produced in the corresponding period of 1928. This year's output to date included 499,418 tons of ingots and 34,254 tons of castings.

PRICES.— Pig iron markets remained quiet during May, with orders placed being generally limited to small amounts for prompt delivery. Small melters especially were reported to be reticent about covering more than immediate requirements. No. 1 foundry pig iron at Toronto and Montreal remained unchanged at \$22.60 and \$24.00 per gross ton respectively, with corresponding quotations for No. 2 likewise stationary at \$22.10 and \$23.50 per gross ton. The Bureau's index for "Iron and Its Products" moved down from 92.5 to 91.6, due in part to reduced quotations for galvanized sheets and scrap iron.

UNITED STATES.- (From "The Iron Age" - issue of June 5.). In the United States the May output of pig iron was at the rate of 104,283 tons per day, a drop of 1,779 tons a day, or less than 2 per cent, from the daily average of 106,062 tons in April. This decline was not unexpected, in view of the recent trend of steel output and the current indications of a seasonal contraction in demand. A net loss of three active blast furnaces, seven having been put out, as against four lighted, is corroborative evidence that operations are on the downswing, though obviously not a sharp one.

PIG IRON AND FERRO-ALLOYS IN CANADA
