Monthly Report

on

PRODUCTION OF IRON AND STEEL

in Canada

DECEMBER 1932

Published by Authority of the HON, H. H. STEVENS, M. P., Minister of Trade and Commerce.

Figures in this report are the latest available at time of printing, where necessary, data for earlier months have been revised.

DOMINION BUREAU OF STATISTIES - CANADA

Mining, Metallurgical and Chemical Branch Chief: W. H. Losee, B.Sc.

PRODUCTION OF IRON AND STEEL IN CANADA

DECEMBER, 1932.

PIG IRON - Production of pig iron in Canada during December totalled 27,031 long tons. This was the highest tonnage reported for any month of the year and exceeded the 14,149 tons of November by 91 per cent. The output for December included 22,842 tons of basic iron and 4,189 tons of foundry iron.

Ont., with the result that 2 furnaces in Canada were in blast on December 31. These active furnaces had a capacity of 1,000 long tons a day, or about 24 per cent of the total capacity of all iron blast furnaces in Canada, and were located as follows: 1 at Sydney, N.S., and 1 at Sault Ste. Marie, Ont. Charges to these furnaces during December included 49,605 long tons of imported iron ore, 17,787 short tons of imported limestone, 19,360 tons of coke from Canadian coal and 12,442 short tons of coke from imported coal.

For the calendar year 1952 the production of pig iron in Canada aggregated 144,130 tons as compared with 420,038 tons and 747,178 tons in 1931 and 1930, respectively. Production started in January, 1932, at 10,000 tons and rose to 18,000 tons in March. A minor setback occurred in April and again in May after which output dropped to around 6,500 tons and remained close to this level until November when 14,000 tons were made. The December tonnage of 27,000 tons the best of the year.

FERRO-ALLOYS - Production of ferro-alloys in Canada including ferrosilicon, ferromanganese and spiegeleisen, totalled 15,487 tons as compared with 46,764 tons in 1931 and 65,223 tons in 1930.

STEEL INGOTS AND CASTINGS - Production of steel ingots and direct steel castings in Canada amounted to 30,755 tons in December as against 37,088 tons in the next preceding month. The drop in December was mostly in the ingot grade made for the further use of the producing companies which declined to 29,986 tons from 56,209 tons while castings were also slightly lower at 769 tons as compared with 809 tons in November.

For the twelve months ending December 31, 1952, the cumulative output of steel ingots and castings totalled 342,788 tons. This output compares with 672,109 tons in 1931 and is the low since 1904 when 148,554 tons were produced. Tonnage for 1932 included 312,360 tons of basic steel ingots, 19,213 tons of electric steel ingots, 2,833 tons of basic castings, 869 tons of converter castings and 7,513 tons of electric castings.

PRICES - Quotations for iron and steel products remained comparatively steady throughout the year. Demand for the greater part was for small spot tonnages, but some contract buying was reported in the early part of the year, due chiefly to increased demand from the automobile industry. The general level of business activity

however, was low as indicated by production of pig iron which dropped back to the level of 1900. At the close of the year, steel plant operating approximated 15 per cent of capacity and output of castings and ingots for 1932 reached the lowest level since 1904.

The Dominion Bureau of Statistics index number for Iron and Its Products on the base 1926 = 100, advanced from 86.0 in November to 86.2 in December, due mainly to higher quotations for galvanised and not rolled and annealed steel sheets.

No. 1 and No. 2 foundry pig iron delivered at Montreal, were quoted at \$23.80 and \$23.30 per gross ton respectively. These respective grades delivered at Toronto were unchanged throughout the year at \$22.60 and \$22.10 per gross ton.

UNITED STATES - Pig iron and ferro alloy production in the United States during 1932 dropped to 8,750,000 tons, the lowest total for any year sinde the 8,313,000 tons of 1896. It is worthy of comment, however, that in 1895 an output of 9,221,000 tons established a new high record, while last year's production was only about 20 per cent of the all time peak of 42,475,790 tons established in 1929.

Output of pig iron rose slightly during the first two months of 1932, but a decline began in March which continued through August, when a low of 17,115 tons daily was reached. A seasonal increase made itself felt in September, and the number of active furnaces increased from 42, making iron at the rate of 16,225 tons a day on September 1, to 51 furnaces producing at the rate of 20,860 tons on December 1.
