PRODUCTION OF IRON AND STEEL

in Canada

APRIL 1932

Published by Authority of the HON H. H. STEVENS, M.P., Minister of Trade and Commerce. Figures in this report are the latest available at time of printing, where necessary, data for earlier months have been revised

DOMINION BUREAU OF STATISTICS - GANADA

Dominion Statisticians R. H. Coats, B.A., F.S.S. (Hop.), F.R.S.C.

PRODUCTION OF IRON AND STEEL IN CANADA

APRII., 1932.

PIG IRON Production of pig iron in Canada during April averaged 563 long tons a day to make a total for the month of 16.898 tons. This rate of output was 3 per cent under the 580 tons per day in the next preceding month but exceeded the corresponding averages of 362 and 332 tons in February and January, respectively. In April of last year the daily tonnage amounted to 1,795.

Iron blast furnace charges during the month included 30,059 long tons of imported iron ore, 8,683 short tons of limestone, and 17,299 short tons of coke. Of the limestone, 4,035 tons were quarried in Canada and all of the coke was made in Canada from imported coal for the four months ending April 30, 1932, a total of 94,731 long tons of iron ore, 26,242 short tons of limestone and 57,205 short tons of coke were used to produce 55,699 long tons of pig iron.

Two iron blast furnaces, one located at Sault Ste. Marie, Ont., and one at Hamilton, Ont., were in blast during the entire month. These active furnaces had a capacity of 850 long tons per day, or about 20 per cent of the total capacity of all iron blast furnaces in Canada.

FERRO ALLOYS Production of ferro alloys in Canada reached the highest level for any month of the year to date when it amounted to 2,185 tons in April. Output in March was reported at 1,295 and in April of a year ago at 4,605 tons. This month's output consisted of only two main grades, ferrosilicon and ferromanganese.

STEEL INGOTS AND CASTINGS Production of steel ingots and direct steel castings in Canada amounted to 36,030 tons during April which was the second best month reported for the year to date being 17 per cent under this year's record established in the previous month at 43,572 tons. The decline from March was altogether accounted for by the lowered output of steel ingots which dropped to 35,030 tons from 42,460 tons while direct steel castings at 1,000 tons showed little change from the previous month's 1,112 tons.

For the four months ending April, the production of primary steel in Canada aggregated 133,131 tons as compared with 331,037 tons during the corresponding period of last year and 441,980 tons in the first four months of 1930.

PRICES A somewhat firmer tone prevailed in the iron and steel markets during April, with current sales of small spot tonnages continuing. There was a slight improvement noted in the demand for scrap early in the month but business soon dropped back to the regular routine. No. 1 and No. 2 foundry pig iron were unchanged at \$22.60 and \$22.10 per gross ton at Toronto and at \$23.80 and \$23.30 per gross ton respectively at Montreal. The Bureau's index for Iron and Its Products advanced from 86.3 to 86.5 being influenced more by higher prices for hot rolled and annealed steel sheets, scrap iron and steel, and steel tank plates, than by declines for galvanized steel sheets and automobile body plates.

UNITED STATES - "Iron Age." Pig iron production in the United States touched a new low point in April, the daily rate of 28,430 long tons having come within striking distance of the minimum output of 1921, which was 27,889 tons a day in July of that year. The daily rate in April was about 8.9 per cent below the March average of 31,201 tons. During the month three furnaces were put out and three put in with the result that there was no change in the number of active furnaces as between the first and last days of the month.
