of the

PRODUCTION OF IRON AND STEEL

IN CANADA

**APRIL**, 1927

Published by Authority of the HON. JAMES MALCOLM, M. P., Minister of Trade and Commerce.

### DOMINION BUREAU OF STATISTICS, CANADA

DOMINION STATISTICIAN - R. H. COATS, B. A., F. S. S. (HON), F.R.S.C.

S. J. COOK, B.A., A.I.C., F.C.I.C., -- Chief of the MINING, METALLURGICAL AND CHEMICAL BRANCH

### PRODUCTION OF IRON AND STEEL IN CANADA

**April** 1927

Production of coke pig iron in Canada amounted to 77,240 long tons in April, an advance of 2 per cent over the 75,637 tons of March and 14 per cent over the output of 67,607 tons reported for April of a year ago. The increase was accounted for by the greater tonnage of foundry iron produced mostly for sale; production of this grade at 11,250 tons was almost double the March output of 5,729 tons. Each of the two other grades showed declines; basic iron produced mostly for further use by the makers dropped to 64,239 tons from 64,373 tons and malleable iron fell off sharply to 1,751 tons from 5,535 tons in March.

Blast furnace charges during the month included 138,750 tons of imported iron ore, 82,273 short tons of coke and 41,762 short tons of limestone. For each long ton of pig iron made in April there were charged to the blast furnaces 4,024 pounds of iron ore, 2,130 pounds of coke and 1,080 pounds of limestone.

For the four months ending April the cumulative production of pig iron in Canada was 255,289 tons, an increase of 12 per cent over the 227,248 tons produced during the corresponding period of 1926. This year's output included 185,441 tons of basic iron, 49,690 tons of foundry iron and 20,158 tons of malleable iron.

As no additional furnaces were blown in during the month and none blown out or banked the same six furnaces were in blast on April 30 as at March 31. Active furnaces in April having a daily capacity of 2,375 long tons per day or 47 per cent of the total capacity of all blast furnaces in Canada were located at the following points: 2 at Sydney, N.S.; 2 at Hamilton, Ont.; and 2 at Sault Ste. Marie, Ont.

Ferro-alloys production consisting mostly of the grade having a high manganese content dropped 18 per cent to 2,747 tons in April from 3,331 tons in March. Small quantities of ferrosilicon were also produced.

#### STEEL INGOTS AND CASTINGS

Steel ingots and castings production in Canada during April at 109,107 tons showed an increase of about 2 per cent over the March figure of 107,381 tons. In April of last year the output was 79,936 tons. The gain was altogether in steel ingots produced for the further use of the makers; production of this grade advanced to 104,540 tons from 102,141 tons and more than offset the lowered output of direct steel castings which fell off to 4,567 tons from 5,240 tons in the previous month.

For the four months ending April the cumulative production was 330,659 tons, a gain of 27 per cent as compared with the 260,394 tons produced during the corresponding period of last year. This year's output included 314,723 tons of steel ingots and 15,936 tons tons of direct steel castings; all of the ingots and 5 per cent of the castings were produced for the further use of the makers, the balance of the castings being made for sale.

Pig iron prices showed no change on the 15th of April as compared with the 15th of March. No. 1 foundry pig iron (2.25% to 2.75% silicon) delivered in Montreal was still quoted at \$27.50 per ton and No. 2 foundry (1.75% - 2.25% silicon) delivered in Montreal, at \$26.50. At Toronto No. 1 foundry was again \$24.80 and No. 2 foundry \$24.30. The Bureau's index number for Iron and Its Products (1913 prices = 100) declined slightly to 143.7 in April from 144.6 in March. This was caused chiefly by lower prices for steel billets and round and square steel bars.

In the United States the daily rate of pig iron production at 114,074 tons in April was the highest recorded this year. It represented a gain of 1,708 tons per day or about 1.5 per cent over the daily rate in March and although slightly under the April, 1926, average of 115,004 tons, it was the highest since that month. April was the first month this year in which a loss in active furnaces was recorded, 8 having been shut down and 5 blown in, a net loss of 3.

#### PIG IRON AND FERRO-ALLOYS IN CANADA
