DEPARTMENT OF TRADE AND COMMERCE
DOMINION BUREAU OF STATISTICS
CENSUS OF INDUSTRY
MINING, METALLURGICAL AND CHEMICAL BRANCH
OTTAWA CANADA

Chief Mining, Metallurgical and Chemical Branch: W. H. Losee, B. Sc.

#### ANNUAL INDUSTRY REPORT

IRON AND STEEL AND THEIR PRODUCTS GROUP

THE PRIMARY IRON AND STEEL INDUSTRY, 1935.

Statistics for the primary iron and steel industry cover the operations of plants engaged chiefly in the manufacture of (a) pig iron, (b) ferro-alloys, (c) steel ingots and direct steel castings, (d) rolled and drawn iron and steel products such as bars, plates, sheets, strips, rails, wire rods, structural shapes, etc. Thirty-eight firms were included in this industry in 1935 and reports were received for 53 different plants or departments including 4 blast furnace departments, 3 ferro-alloy plants, 30 steel furnace divisions and 16 rolling or drawing mills.

Factory sales of pig iron, steel, ferro-alloys and rolled products were nearly 33 per cent higher in 1935 than in 1934, the values being \$38,700,961 and \$29,101,463, respectively. The 24 works in Ontario reported sales at \$25,268,288 or 65 per cent of the total for Canada; 6 works in Nova Scotia accounted for \$7,987,949 or 20 per cent, and 13 plants in Quebec had total sales worth \$4,155,782 or 11 per cent of the total. There were also 4 operating plants in Manitoba, 1 in Alberta and 5 in British Columbia.

Capital employed in 1935 was reported at \$86,465,290, of which \$63,011,795 represented the value of land, buildings and plant equipment, \$16,141,507 was the value placed on materials on hand and in process, and finished products on hand, and \$7,312,188 was the total of operating capital such as cash, bills receivable, etc., as at the end of the year. The total for Ontario was \$53,889,173; for Nova Scotia, \$19,233,969; for Quebee, \$11,262,923; for Manitoba, \$1,723,715; and for Alberta and British Columbia \$355,710.

The average number of employees in the primary iron and steel plants was 9,523 in 1935 compared with 7,400 in 1934. About 680 workers were employed in blast furnace departments, 293 in ferro alloy plants, 3,150 on steel furnaces, and 5,400 in rolling mills. About 61 per cent, or 5,682 of these workers were employed in Ontario, 1,791 in Quebec, 1,630 in Nova Scotia, 304 in Manitoba and 116 in Alberta and British Columbia.

Payments in salaries and wages amounted to \$12,279,390 in 1935, an increase of 36 per cent over the total of \$9,009,512 for 1934. The average wage per wage-earner was \$1,246 in 1935 compared with \$1,136 in 1934.

Expenditures for fuel and electricity totalled \$4,845,559 in 1935 compared with \$3,969,136 in the previous year. Electricity alone cost \$1,542,399 in 1935 and \$1,148,554 in 1934.

(a) PIG IRON - Production of pig iron increased by 48 per cent in 1935 to 599,875 long tons as compared with 404,995 in 1934 and 227,317 tons in 1933. Output of basic iron was given at 468,244 or 78 per cent of the total; malleable iron amounted to 69,337 tons and the foundry grade to 62,294 tons.

Sales of pig iron by the producers totalled 131,749 tons at \$2,650,990 in 1935 as against 97,440 tons at \$1,856,284 in the previous year. Transfers of pig iron to the other departments of the producing companies amounted to 445,165 tons or 26 per cent more than in 1934.

Imports of pig iron during 1935 advanced to 8,920 long tons from 6,419 tons in 1934 and exports advanced to 13,759 tons from 9,221 tons. Stocks held by the producers advanced to 87,346 tons at the end of 1935 from 65,637 tons at the close of 1934. The apparent consumption of pig iron during the year, as computed from production, imports and changes in stocks, amounted to 573,327 tons compared with 446,063 tons during 1934.

Charges to furnaces in 1935 included 1,039,234 long tons of iron ore, 55,269 long tons of mill cinder, etc., 30,714 long tons of scrap, 577,355 short tons of coke, and 278,469 short tons of limestone.

The four producers of pig iron in Canada have 10 blast furnaces available for use which, if operated at capacity, could produce 1.43 million tons of pig iron per year. Actual production in 1935 at 599,875 tons was about 42 per cent of the rated capacity.

Iron furnaces in blast in January represented 34 per cent of the capacity; this percentage advanced to 37 for the months February, March, April and May; increased again to 45 for the period June to October, inclusive. In November the year's high of 52 was reached, and in December, the percentage dropped to 45 again.

Only 5 of the 10 furnaces were used during the year,

(b) FERRO-ALLOYS - Production of ferro-alloys during 1935 amounted to 56,616 long tons compared with 31,921 tons in 1934 and 30,133 tons in 1933.

In 1935, ferrosilicon was produced by 6 different plants. Four concerns recovered small tonnages of ferrosilicon as a by-product from the manufacture of fused alumina, another company made 50%, 75%, and 90% grades of ferrosilicon and a little ferrochrome, and another concern made 15%, 50%, 75%, 85%, and 90% grades of ferrosilicon, some ferrochrome, and large tonnages of ferromanganese and spiegeleisen. One of the pig iron producers made occasional runs of spiegeleisen in their blast furnace, and a chemical manufacturer made some ferrophosphorus.

Imports of ferro-alloys totalled 2,154 long tons at \$273,146 in 1935 as against 1,226 tons at \$247,783 in 1933.

(c) STEEL INGOTS AND CASTINGS - Steel production advanced 24 per cent in 1935 to 941,527 long tons from 757,782 tons in 1934. The 1935 output included 909,186 tons of ingots and 32,341 tons of castings. Practically all of the ingots were transferred to the producers own rolling mills, while nearly all of the castings were made for sale. The sales of ingots and castings amounted to 35,392 tons at \$4,196,922 compared with 20,139 tons at \$3,228,451 in the previous year. Transfers to the producers own works were reported at 912,075 tons as against 737,477 tons in 1934.

Inventories of steel on December 31, 1935, were reported at 20,964 tons of ingots and 2,390 tons of castings, a total of 23,354 tons.

Thirty steel plants were in operation during 1935. Four of these works operated basic open hearth furnaces only, 22 used electric furnaces only, 2 used both basic open hearth and electric furnaces and 2 used only converters. Six plants made basic open hearth steel ingots, 5 made electric ingots, 21 made electric steel castings, 3 made basic open hearth castings and 2 made converter castings. These plants reported steel furnace equipment as follows: 42 basic open hearth furnaces with a total daily capacity of 5,186 long tons; 4 converters with total capacity of 932 tons, and 37 electric furnaces with a total capacity of 758 tons. Two plants were idle during the year, 1 electric furnace in Ontario and 1 basic open hearth furnace in Alberta, with a combined capacity of about 87 tons of steel per day.

(d) ROLLED AND DRAWN STEEL - In 1935 there were 13 hot rolling mills in operation, 1 cold rolling plant and 2 works for making cold drawn shapes. Nine of these mills were in Ontario, 3 in Quebec, 3 in Nova Scotia, and 1 in Manitoba.

The value of sales from these rolling mills was reported at \$29,980,003, an increase of 30 per cent over the corresponding total of \$23,035,746 for 1934. Merchant bars were worth \$7,195,199; plates, sheets, strips and sheet piling, \$6,124,505; rails, \$4,484,594; blooms, billets and slabs, \$1,899,030; cold rolled and cold drawn shapes, \$1,402,950; bars for reinforcing concrete, \$1,597,280; structural shapes, \$1,762,205; wire rods, \$2,412,244; and railway tie plates, \$944,342. Horseshoes, railway spikes, forgings and miscellaneous rolled products made up the remainder of the output.

About 1,031,000 long tons of iron and steel passed through the mills in 1935 and 950,000 tons of this came from the producers own works.

Imports of rolling mill products were valued at \$24,573,577 in 1935 compared with \$20,801,030 in 1934. Shipments from the United Kingdom were worth \$12,102,715 and the purchases from the United States were appraised at \$11,538,552.
