THE ALUMINIUM PRODUCTS INDUSTRY, 1934

The aluminium products industry for which statistics are given in this bulletin includes the factories in Canada which were engaged chiefly in making aluminium articles such as kitchen utensils, etc. The large aluminium smelters at Arvida, P.Q., and Shawinigan Falls, P.Q., are not included in this group as these works have been classified to the Non-Ferrous Smelting and Refining Industry which is reviewed in a separate bulletin. In connection with the smelter at Shawinigan Falls there is a large fabricating mill in which wire and other such products are manufactured but all information for this department has been included in the general report for the smelter at that point. Therefore the data given in this bulletin are incomplete to the extent that they do not cover the manufacture of aluminium products at Shawinigan Falls. Aluminium castings were made also in brass and iron foundries, but as the casting of aluminium was only a small part of their business such works were necessarily classified to the brass and iron industries.

Production from this industry in 1934 was valued at \$3,745,433 an increase of 35 per cent over the 1933 total of \$2,778,274. Sixteen plants were in operation and nine of these were engaged chiefly in the manufacture of cooking utensils and hollowware. Capital employed by these concerns amounted to \$3,759,900 of which \$1,793,118 was the value of lands, buildings and equipment. The number of employees was 789 and payments in salaries and wages to these workers totalled \$826,597. Materials used in manufacturing, chiefly aluminium sheets and circles, cost \$2,115,100 delivered at the works.

Nine plants in this industry manufactured aluminium kitchenware, 1 made fabricated products, and among the products made by the other concerns were hot blocks and dies, boot and shoe lasts, rail welding portions, forging and nickel thermit, electric heaters, hair wavers and curlers, etc.

The production of aluminium kitchenware in this industry was valued at \$995.135 in 1934, but, in addition, concerns in other industries made aluminium kitchenware worth \$178,742, bringing the total for Canada to \$1,173,877; the comparable total figure for 1933 amounted to \$969,948.
