ANNUAL TNDUSTRT REPORT<br>IRON AND STEEL AND THEIR PRODUCTS GROUP<br>THE BOILERS, TANKS AND ENGINES INDUSTRI. 1936.

In accordence with the Statistics act each manufacturing concern in Canade is required to aubait to the Dominion Bureau of Statistics at Ottawa a yearly report covering such items as production, employment, capital, etc. In most cases a manufacturer makes more than one product but is not asked to apportion these details between the different products which he manufactures. It is impossible, therefore, except in a few cases, to complle detailed flgures of employment, etc., for any single commodity.

For the presentation of these detalled statistics, the Bureau has sub-divided manufacturing into nine groups of industries, producing concerns being classified according to the principal component material of their major products. For example, the pulp and paper industry is classified under Frood and Paper"; boller manufacturers under "Iron and Steel and Their Products", otc. These main groups are further divided Into industries to which the concerns are allotted according to the nature of their main products. The iron and steel group is subdivided into 17 industries, one being the Boilers, Tanks and Engines Industry which is reviewed in this bulletin. This industry covers the operations of establishments which made as their chief products such articles as boilers or heating radiators, engines, tanks, and miscellaneous products from steel plate such as bins, hoppers, smokestacks, etc.. It is apparent, however, from the explanation given above, that the production figures as compiled for this industry do not necessarily represent the total Canadian output for the comodities listed as they may have been produced also as minor products of flrms in other industries. Supplementary tables have been added to give total output figures for bollers, engines and heating radiators.

Production in the Boilers, Tanks and Engines Industry in 1936 was valued at $\$ 8,305,860$. This output was 15 per cent greater than the 1935 total and was the highest value reported for any year since 1930.

Fifty-six establishments were included in this industry in 1956, there being 27 in Ontario, i2 in Quebec, 9 in British Columbia, 6 in Nove Scotia, and 1 in each of Manttobe and Saskatchewan. These concerns, with fixed and working capital amounting to $\$ 14,848,789$, gave amployment to a monthly average of 2,519 people and paid $\$ 3,066,242$ in salaries and wages, $\$ 3,567,813$ for materials which were used in manufacturing and $\$ 244,687$ for fuel and electricity.

Tables 1 to 12 of this report deal with the Boilers, Tenks and Engines Industry only, while Tables 18 to 17 give supplementary date covering the total production in Canada of boilers, engines and heating radiators. The total output value in 1936 for heating and power boilers of all kinds was $\$ 1,735,522$; for engines of all kinds, except automobile, $\$ 1,031,277$, and for heating radiators, $\$ 1,229,485$.

Imports of engines during the calendar year 1936 Included 42,879 motor vehicle engines and parts valued at $\$ 5,019,906 ; 924$ diesel engines and parts at $\$ 1,390,921 ; 670$ marine engines at $\$ 221,326$; 106 aircraft engines at $\$ 339,444 ; 1,545$ outboard motors at $\$ 96,088 ; 86$ engines for use in fishing boats at $\$ 23,624$, and 9,319 other engines, including internal combustion and steam at $\$ 791,181$. Imports of boilers and parts were appraised at $\$ 122,938$.

Exports during 1936 included 1,475 internal combustion engines and perts worth $\$ 121,547$ and 2 steam engines with parts at $\$ 1,669$.

## SUPPLFMITNTARY DATA

(a) Boilers

As pointed out in the opening paragraphs of this report, the Boilers, Tanks and Eagines Industry includes only the firms which made bollers, engines, etc., as their major products. Hence the production figures as given in Table 12 do not represent the total output in Canada of the comnodities which are listed. To provide complete figures for heating and power boilers a special compilation has been made covering the reports of all concerns which reported boilers as one of their products.

In 1936, a total of 41 concerns reported a production of heating or power boilers. These factories made goods having a gross selling value of $\$ 7,974,852$ of which boilers alone accounted for only $\$ 1,733,522$. The principal statistics covering the entire business of these works are given below.

Table 13 - PRTNCTPAT STATISTICS FOR ALT ESTABLTSHMENTS WHICH REPORTED A PRODUCTION OF BOILPRS in 1955 and 1956.
1955
1.936

| Number of manufacturers | 48 | 41 |
