#### ANNUAL INDUSTRY BULLETIN

## THE COOKING AND HEATING APPARATUS INDUSTRY, 1937.

In accordance with the provisions of the Statistics Act each manufacturing concern in Canada submits to the Dominion Bureau of Statistics at Ottawa a yearly report covering such items as production, employment, capital, etc.. In most cases a manufacturer makes more than one product but is not asked to apportion these details between the different articles which he manufactures. It is impossible, therefore, except in a few cases, to compile accurate figures of employment, etc., for a single commodity or even for a group of related commodities.

For the presentation of these detailed statistics the Bureau has subdivided manufacturing into nine groups of industries, producing concerns being classified according to the principal component material of their major products. For example, the pulp and paper industry is classified under "Wood and Paper": iron foundries under "Iron and Steel and Their Products", etc.. These main groups are further divided into industries to which the concerns are allotted according to the nature of their main products. The iron and steel group is subdivided into 17 industries, one being the Cooking and Heating Apparatus Industry which is reviewed in this bulletin. dustry covers the operations of iron and steel works which were occupied chiefly in making stoves, furnaces, oil burners, water heaters and other heating equipment (except boilers and radiators), but some castings, machinery, etc., were made as secondary products. Production data for this industry, therefore, include some minor products which cannot be classed as heating equipment, and, on the other hand, do not include the total output in Canada of heating apparatus, as some firms in other industrial groups made stoves and heaters as secondary products. Tables 1 to 9, inclusive, of this report are for the Cooking and Heating Apparatus Industry only, and Tables 10 to 15 have been added to give supplementary data on the total output of stoves, furnaces, etc., as assembled from all industries.

In 1937 only 68 establishments were included in the Cooking and Heating Apparatus Industry, 45 being in Ontario, 6 in Quebec, 8 in British Columbia, 3 in New Brunswick, 3 in Nova Scotia, 2 in Alberta and 1 in Manitoba. These concerns made products worth \$15,976,018 at factory prices, employed an average of 5,239 workers throughout the year, paid out \$5,860,623 for salaries and wages, \$353,941 for fuel and electricity, and \$6,040,819 for manufacturing materials. Capital employed amounted to \$16,820,091, including \$7,953,909 as the value of land, buildings and equipment, \$4,307,411 as the value of inventories and \$4,558,771 as working capital.

Table 9 - PRODUCTS MADE IN THE COOKING AND HEATING APPARATUS INDUSTRY, 1936 and 1937.

NOTE - Data given in this table are for the Cooking and Heating Apparatus Industry, which includes only the firms making stoves, furnaces, etc., as chief products. These articles may have been made also as minor products of firms classified to other industries, so the figures in this table do not necessarily represent the total Canadian production of the items which are listed. For the total figures, see Tables 10 to 15, inclusive.

## LIST OF FIRMS INCLUDED IN THE COOKING AND HEATING APPARATUS INDUSTRY, 1937.

NOTE - This list is merely a directory of the firms which made stoves, furnaces, water heaters, etc., as their chief products, and have been classified to the Cooking and Heating Apparatus Industry. It is not intended to be a complete list of the firms which made these products as some such manufacturers have been included in other industries.
