RAILWAY FREIGHT TRAFFIC

On January 1, 1956 the Railway Freight Traffic Statistical series underwent two principal changes. First the water-borne imports at lake or ocean ports formerly included with rail imports as "Received from Foreign Connections" are now combined with the Commodities "Loaded at Stations in Canada". This permits a thorough analysis of traffic entering the country by rail, subdivided between goods destined to points in Canada and intransit freight shipped to foreign points by rail. Freight terminated has also been modified to segregate freight exports by rail to the United States. The second major change is the adoption of the "Uniform Classification of Accounts for Common Carriers by Railway". The classification groups railways into four classes and all railways having gross annual revenues of \$500,000 or more (class I and II common carriers) are now required to report monthly and weekly statistics. Data for Freight Traffic, Railway Operating and Carloading statistics will be more comparable as a result. Comparisons between these statistical series were not possible in the past due to the different groups of railways included in each.

The table below shows the result of the change in the number of companies reporting. Eight companies which had annual revenues of less than \$500,000 were deleted from statistics for 1955, and one company was added for 1956. The table gives comparisons between 28 and 20 railways for April 1955 and for 21 and 20 railways for April 1956. The effect of the change is very slight and the eight companies deleted carried only 104,335 tons of freight or less than 1 per cent of the total reported in April 1955. Mine Products was the principal commodity affected by the change because of the extraction of bituminous coal hauled by the Cumberland Railway and Coal Co. and the Morrissey, Fernie and Michel Railway Co.
