ELECTRIC RAILWAYS OF CANADA

1 9 4 1

The ten large electric railway systems carried 99,795,635 more passengers than in 1940, an increase of 16.0 p.c., and the increase for all systems was 113,505,581 passengers or 16.7 p.c. Only two small systems failed to show increases and their decreases were insignificant. The London Street Railway ceased operating street cars in 1940 and operated buses exclusively in 1941. Consequently, the statistics for that system were excluded from the 1941 report. Because these statistics include only systems operating electric railways this feature should be considered when making comparisons with statistics of former years. To allow direct comparisons with 1940 statistics, totals for 1940, with London Street Railway statistics excluded, have been shown in the tables of this preliminary report.

The decrease in track mileage which has been continuous since 1928 has been due to railways ceasing to operate and others reducing mileage as motor buses were substituted for cars or as traffic declined and service was discontinued. The decrease in total main track in the last eleven years has been 552 miles. In some cases these tracks are still in the streets and not used and in others they have been taken up.

The car and bus miles reached a low point in 1933 and have been increasing each year, especially during the last two years, amounting to 137,578,542 in 1941, an increase over 1940 of 7.3 p.c. The number of motor buses in service of these electric railways increased from 926 in 1940 to 1,117. The number of street cars increased from 3,358 to 3,362 and trackless trolley cars increased from 29 to 30.

During the year 66 persons were killed in accidents involving street railway cars and buses. This was the largest number since 1932 when 79 persons were killed and is comparable with 42 for 1940. The number of persons injured was 3,933 which also was the largest number since 1931. Only one passenger was killed and 2,508 were injured out of 795,000,000 carried. Four conductors were killed and 94 were injured whereas no bus drivers were killed and 13 were injured.

The railway in Montreal is operated under a contract between the city and the operator and the statistics are those of the operator except that table 6 shows also the income data of the company. This income includes certain allowances to the company shown as expenses of the operation, together with taxes, dividends, etc., payable by the company.
