ELECTRIC RAILWAYS OF CANADA

1 9 4 3

Electric railway systems carried 1,177,003,883 passengers on their electric cars, trolley buses and motor buses during 1943. This was by far the greatest traffic ever handled by these systems; the increase over 1942 traffic was 180,795,348 passengers or 18.15 per cent. Both the number of passengers and the percentage increase were less than the 1942 increase over 1941 traffic, but the performance was remarkable because the systems were operating close to their maximum capacities in 1942. Oshawa showed an increase of 44.32 per cent and Edmonton an increase of 43.90 per cent. The fourteen systems carrying over a million passengers each, accounted for 94 per cent of the total and showed an increase during the year of 17.8 per cent.

The operating revenues of these systems increased from \$69,034,130 in 1942 to \$80,027,414 or by 15.9 per cent. Operating expenses increased from \$43,473,516 to \$54,548,355 or by 25.5 per cent, reducing the net operating revenue from \$25,560,614 to \$25,479,079.

There was little change in the track mileage during the year. The mileage made by electric cars increased from 112,978,503 in 1942 to 124,454,463 or by 10.2 per cent, trackless trolley buses showed an increase from 1,534,107 to 1,780,768 miles or 16.1 per cent and motor buses were operated 37,815,126 miles as against 38,005,519 miles, a decrease of 190,393 miles or 0.5 per cent. The percentage of the total traffic handled by these three classes of vehicles was almost the same as in 1942 but the number of passengers per vehicle increased for each class, namely: 7.3 per cent for electric cars, 6.7 per cent for trolley buses and 18.2 per cent for motor buses. The number of electric cars in service increased from 3,449 to 3,458, trolley buses increased from 38 to 41 and motor buses from 1,282 to 1,329. The number of car and bus motormen conductors and operators increased from 8,509 to 9,599 and total employees increased from 16,051 to 17,896 or by 11.5 per cent, with an increase in total pay roll from \$27,923,343 to \$33,975,281 or of 21.5 per cent.

During the year no passengers were killed as compared with 2 in 1942, but the number injured was increased from 3,157 to 4,301. Also, the number of pedestrians killed was reduced from 59 to 52 but the number injured increased from 769 to 1,002 in accidents involving vehicles of the electric railway systems. Electric cars were involved in the greater part of these accidents, but the number of trolley buses involved in accidents in which persons were injured increased from 36 to 92 and the number of motor buses increased from 781 to 855. The number of employees killed declined from 3 in 1942 to 2 and the number injured increased from 499 to 722 or by 44.4 per cent.

The system in Montreal is operated under a contract between the City and the Company and the statistics are those of the operator, except that Table 6 shows also income data of the Company. This income includes certain allowances to the Company shown as expenses of operation, together with taxes, dividends, etc., payable by the Company.
