ELECTRIC RAILWAYS OF CANADA

20-1200

1947

Introduction

The system of accounts used in the present issue of Electric Railway statistics is in accordance with the new "Classification of Accounts for Transit Systems in Canada" as compiled by the General Transit Accounting Committee of the Canadian Transit Association, and prescribed by the Bureau. This became effective January 1, 1946. While comparability with previous annual reports has been altered in some respects, the current standard classification has improved the uniform coverage of detail and made possible closer comparisons with United States statistics. In addition the revised classification is suitable for a punch card system of accounting and is readily adaptable to large or small operating companies.

A transit system means an electric railway, rapid transit, motor bus, motor coach or trolley bus operation carrying passengers (and incidentally freight and/or express) in urban, suburban or interurban service. It may mean any one of these operations, or any combination of them.

In the following report only the operations of electric railways with their auxiliary or feeder motor bus lines are covered. The Bureau's annual report, "Motor Carriers, Freight and Passenger" is complimentary to complete the coverage of the transit industry.

Passenger Traffic maintained at high level in 1947

While registering a minor decline of 1.6 p.c. from the all time record established in 1946, passenger traffic on electric railway systems continued at a high level during 1947. A total of some 1,323,724,000 passengers were transported compared with 1,344,917,000 in the preceding year and is more than double pre-war volume, the annual average for 1935-39 having been about 622,000,000. High levels of industrial employment and income during the year in addition to an insufficient supply of new motor vehicles assured steady patronage of the transit systems. Further, new housing developments have usually been built on the outskirts of cities and towns and encouraged the use of feeder bus lines. Another factor in many larger cities is the limited parking facilities available for automobiles, which decides many people to use the transit systems in getting to and from work, etc.

In comparison with pre-war volume, two determinants might be mentioned. First, a considerable volume of Canadians from rural sections moved into urban centers for war work and remained in large numbers after hostilities ceased and, secondly, the greatly increased employment by industry of urban women who predominantly use transit vehicles. The Prairie Census of 1946 confirms the movement of rural population to urban areas as compared with the 1941 Census; cities such as Winnipeg, Edmonton, Calgary, Regina, Vancouver, etc., increased much in excess of normal trends.

Compared with 1946, fare passengers carried showed minor declines in all provinces except New Brunswick. A strike in Vancouver lasting from October 20th to November 17th adversely affected the total traffic for British Columbia, which declined from about 156,769,000 in 1946 to 152,573,000 fares. Over 70 p.c. of the national total was carried in Ontario and Quebec.

There were 32 electric systems reporting operations during 1947 compared with 33 in the previous year, the Hull Electric Railway having ceased urban operations November 30, 1946, and was replaced by a bus company. Urban systems which use motor buses only are not included in the present report. Half of the 32 systems carried over 12 million passengers during 1947 and represented nearly 96 p.c. of the passengers transported. Montreal Tramways led with 398,349,773 fares against 396,480,489 in 1946, while the Toronto Transportation Commission carried 307,590,938 as against 310,115,600 passengers one year earlier. Fifteen of the 32 systems reported increases in traffic over 1946.

#### Revenues and Expenses

Gross revenues from operations were reported as \$86,519,712 for 32 systems in 1947 compared with \$87,515,721 for 33 systems during 1946. (Eliminating the Hull Electric from 1946 totals, a decline in revenue of about \$584,000 or less than 0.7 p.c. is indicated.) Wage and material costs continued to mount rapidly in 1947 and the diminishing margin between revenues and expenses engendered fare increases in some municipalities.

Operating expenses jumped from \$75,550,821 in 1946 to \$81,787,723 or by \$6,236,902, up 8.3 p.c., and the net operating revenue total for the industry dropped from \$11,964,900 to \$4,751,989. All provinces, except British Columbia, reported net revenue from operations and the deficit in the coast province climbed to \$1,924,514 from \$509,359 in 1946.

Only 15 of the 32 companies reported any net income transferred to earned surplus and earnings in some instances were bolstered by revenues from light and power departments. Eight companies reported provision for income tax and only the Winnipeg, Ottawa and Hamilton systems showed sizeable amounts for the year's operations.

#### Employees

The number of employees totalled 22,627 earning \$50,117,441 compared with 21,700 receiving \$45,675,563 in 1946. The average earnings thus increased from \$2,105 to \$2,215 or by 5.2 p.c. By classes, 289 employees were added to General Administration, 147 to Maintenance and 508 to Transportation while Traffic employees declined from 43 to 26.

#### Mileage and Equipment

Considerable first main track mileage was abandoned during 1947 in favour of motor bus and trolley bus operations, the total in use declining from 1,004 miles at the end of 1946 to 895 miles at December 31, 1947. This is a record decrease for any one year and represents a decline of over 10 p.c. Mileage covered by all passenger vehicles of the 32 systems increased from 177,256,084 miles in 1946 to 180,204,812 or by 1.7 p.c., while freight carried rose from 3,506,805 to 3,655,278 tons.

Trackless trolley buses operating in nine cities as against three in 1946 ran 5,169,256 miles and carried 41,829,966 fares compared with 2,912,964 miles and 25,269,215 passengers one year earlier. Passenger bus mileage increased from 43,977,690 to 53,828,636 miles while passengers rose from 231,914,513 to 277,395,998. Electric car mileage, on the other hand, declined from 150,365,430 to 121,206,920 and passengers numbered 959,813,450 as against 1,043,768,631 one year earlier.

On a percentage basis about 75 p.c. of passengers carried travelled on electric cars, 21.7 p.c. on motor vehicles and 3.3 p.c. on trolley buses during 1947. In 1946 some 80 p.c. of the total was credited to electric cars.

The number of electric passenger cars in service at the end of 1947 was 3,345 against 3,510 one year earlier. Buses increased from 1,491 to 1,949 while trolley buses numbered 379 compared with 77. Over three quarters of all passenger vehicles were classified as "operated by one man".

Reflecting in part the purchase of new buses and trolley coaches, the investment in road and equipment of the industry rose from \$203,537,797 in 1946 to \$218,439,361, with large increases in Toronto and Vancouver.

#### Safety Record for 1947

Electric railway systems fatalities during 1947, were identical in number with 1946, namely 77. Of these fatalities, 4 were employees, only 2 passengers, 47 pedestrians, 18 motorists and 2 in other vehicles. It is apparent that with only 2 killed out of some 1,323,724,000 passengers, a unique and remarkable record of safe transportation is maintained by the electric railways of Canada - a record for passenger safety unsurpassed elsewhere in the field of transportation.

Among the 77 fatalities, 54 persons were in accidents involving electric cars, 6 trolley buses, 9 motor buses, 2 locomotives and 1 sweeper. Two deaths were caused by electric contact.

Total persons injured in accidents reported by electric railways during 1947 were 6,560 compared with 6,497 in 1946 and 6,628 in 1945. Of the 1947 total 910 were street railway employees, 4,181 passengers, 901 pedestrians, 477 motorists and 85 in other vehicles.

Monthly transit reports for the first seven months of 1948 indicate that the 1947 volume of traffic was fairly well maintained; increases on interurban lines contrasting with declines in urban traffic. Revenues, however, advanced in line with fare increases and averaged about 5 p.c. above 1947.

#### NOTES

The Montreal Tramways system is operated under a contract between the city and the operator and statistics given are those of the operator except that table 6 shows also the income data of the entire company. This income includes certain allowances to the company shown as expenses of operation, together with taxes, dividends, etc. payable by the company. Hamilton Street Railway previously marked provincially owned was sold in August, 1946, to private interests.

8/ Represents all divisions of the company.

9/ Held by C.N.R.

10/ Included with steam railways.

Ceased Electric car operations May 21, 1947.

" " " " " August 31, 1947.

x Includes 34.33 miles of steam railway operated under trackage rights.
