# ELECTRIC RAILWAYS

1955

The "Electric Railways" report as such will be discontinued with this issue. Because of the growing importance of motor bus and trolley coach transportation the report is being separated into two parts. A new series, entitled "Urban Transit Statistics", will contain all local city passenger operations, while freight and intercity passenger services of the electric railway companies will be incorporated into the "Railway Transport" series.

The financial and operating statistics of electric railways for the year 1955 together with their motor bus and trolley coach operations are presented in this report.

The system of accounts used in recent issues of Electric Railway statistics is in accordance with the "Classification of Accounts for Transit Systems in Canada" as compiled by the General Transit Accounting Committee of the Canadian Transit Association, and prescribed by the Bureau. This became effective January 1, 1946. The current standard classification has improved the uniform coverage of detail and made possible closer comparisons with United States statistics. Further, the revised classification is suitable for a punch card system of accounting and readily adaptable to large or small operating companies.

The electric street car has been and is being steadily replaced as the principal vehicle of mass transportation in most Canadian cities and towns. The shift from electric trams to motor buses and

electric trolley coaches has been pronounced since the end of the war. While the street car is particularly suited to the efficient mass movement of large numbers of passengers, surface traffic conditions in metropolitan areas have become so congested, noticeably at the rush hours in down-town sections, that the largest cities are planning subways. That for Toronto was placed in operation in March, 1954. Few of the older cities were designed to carry the present increasing volume of motor vehicle and street car traffic on relatively narrow streets. The street car on a fixed track lacks manoeuvrability and has become the target of the motoring public and some town planners and traffic experts.

The transition from steel to rubber is illustrated by the fact that over the past thirty years some 43 electric railway systems have ceased operating as such. The convenience of operating over a "right-of-way" maintained by the municipality or province combined with the greater adaptability and manoeuvrability inherent in a freewheeling vehicle have encouraged this transformation in transit operations.

In 1946 just over 19 p.c. of the total passengers carried by electric railways were moved on motor buses and trolley coaches, whereas by 1955 this percentage has risen to 59.2 p.c. compared with 55.4 p.c. in 1954. From current monthly transit reports covering both electric railway and bus companies, it is apparent that an even larger percentage of passenger traffic is presently carried by motor bus and trolley coach combined.

## 1955 Operating Results

The number of revenue passengers carried by electric railway systems during 1955 fell 3.6 per cent to 1,025,314,237 from 1,063,705,752, continuing the steady decline which has taken place each year since 1946. Part of the decline however is attributable to a reduction in the number of lines reporting which has fallen from 33 in 1946 to 21 in 1955.

A comparison table on page 8 showing the passenger traffic on lines operating during 1955 and 1954 reveals that only three systems carried more passengers in 1955 than in the previous year. These were the Nova Scotia Light and Power Company with a 1.2 per cent increase, and the Cornwall Street Railway, Light and Power Company and Oshawa Railway Company both with 2.1 per cent increases. Of the 1,025,314,237 persons carried during 1955, 316,442,441 or 30.9 per cent were passengers of the Montreal Transportation Commission and 315,319,565 or 30.8 per cent were

patrons of the Toronto Transit Commission. The third largest system, the British Columbia Electric, carried 101,136,397 passengers or 9.9 per cent of the overall total.

## Revenues and Expenses

Operating revenues of the twenty-one reporting electric railways in 1955 totalled \$109,617,497, up 0.3 per cent from \$109,334,662 in 1954. Operating expenses kept pace with revenues, rising 0.5 per cent to \$109,576,378 from \$109,006,301 resulting in an 87.5 per cent decrease in net operating revenue to \$41,119 from \$328,361. On a provincial basis, the Nova Scotia net amounted to \$78,856 up from \$70,450; the Quebec net was a deficit of \$559,614 in contrast to a profit of \$789,655; Ontario netted \$378,379, up from a deficit of \$289,951; Manitoba had a loss of \$162,067 compared with one of \$27,963 in 1954; the Saskatchewan net profit

fell to \$57,168 from \$96,279; Alberta netted \$385,483 dropping from \$746,136; and British Columbia reduced its deficit to \$137,086 from \$1,056,245 in the previous year.

Investments by the industry in road and equipment rose to \$294,095,916, up 1.0 per cent from \$291,138,722 in 1954. During 1955, the Greater Winnipeg Transit added \$3.9 million to its investment accounts continuing an extensive program of modernization and improvement of rolling stock and physical property.

#### Employment and Wages

The total salaries and wages paid to 19,280 employees in the industry amounted to \$69,632,464. This compares with 20,318 employees and \$70,109,414 in earnings for the year 1954. The average annual salary for 1955 was \$3,612, up 6.3 per cent from \$3,397 in 1954. By way of contrast, the average annual wage of the 20,091 persons employed in the industry in 1945 was \$1,959.

#### Mileage and Equipment

The total mileage of main track decreased to 729.45 in 1955 from 771.66 in 1954 and 814.30 in 1953, thus reflecting the gradual transition from electric cars to motor buses and trolley coaches now taking place in the transit industry. During the year under review track mileage was reduced on lines of the British Columbia Electric Railway Company, the Montreal Transportation Commission and the Toronto Transit Commission. The length of sidings and turnouts decreased also during 1955, dropping to 215.06 miles from 216.16 bringing the total track mileage to 944.51 at the close of 1955

compared with 987.82 miles in operation at the close of 1954. Mileages covered by all vehicles during the year under review decreased to 172,483,801 from 173,593,088 or by 0.6 per cent. Declines in electric car mileages contrasted with gains in vehicle miles of trolley coaches and motor buses.

A division of fare passengers indicates that electric cars carried 39.7 per cent of the 1955 total against 43.5 per cent in 1954. Motor buses accounted for 35.4 per cent compared with 32.5 per cent a year earlier and trolley coaches carried the remaining 23.8 per cent up from 22.9 per cent. A total of 11,530,330 passengers or 1.1 per cent of the total carried during the year were not distributed as to type of transit vehicle in the report filed by the Regina Transit System.

The number of electric passenger cars in service at the end of 1955 was 1,849, down from 2,137 in 1954. Trolley coaches dropped one to 1,143 from 1,144 while motor buses increased to 2,656 from 2,348.

#### Safety Performance

Fatal accidents during 1955 resulted in the death of twenty-five persons, including two employees, four passengers, eleven pedestrians and eight persons riding in motor vehicles. In the previous year there were forty-two fatalities, including one passenger, twenty-nine pedestrians, ten persons riding in motor vehicles and two "others". Total persons injured in all electric railway accidents were 4,654 compared with 4,748 in 1954. During the year under review 1,289 injuries were the result of collision, 10 resulted from electric contact and 3,355 from other unspecified causes.

---

Statistics of the Montreal Transportation Commission relate to the twelve month period commencing December 1, 1954 and ending November 30, 1955. Those of the Greater Winnipeg Transit cover the twelve month period November 1, 1954 to October 31, 1955. For purposes of this report these details are treated as pertaining to the calendar year 1955.

## Passengers and Freight Carried and Vehicle Miles

Year	Passengers carried	Freight carried	Vehicle miles
