MONTHLY RAILWAY TRAFFIC REPORTS
FOR
YEAR ENDED DECEMBER 31, 1933

The data in the following tables include only revenue freight carried by the Canadian railways and not the "on company service" freight which includes coal for locomotives, ties, ballast and other railway material. These data will consequently not check with data on imports although this freight will not affect the exports. Freight interchanged between Canadian roads is not duplicated in these tables, but freight unloaded and subsequently reshipped is counted each time it is billed out. Foreign connections include railways in the United States and boats cleared for, or entered from, foreign ports, and in this report all freight moved to ports on export rates has been shown as delivered to foreign connections. Although the railways report all grain delivered to the elevators at the head of the lakes as unloaded at stations in Canada and all grain received from the lake elevators as loaded at billing stations, the reports have been corrected from the elevator returns to show the deliveries to and receipts from foreign connections. Grain delivered to elevators at Montreal, Vancouver, and other ocean ports for export has been shown as delivered to foreign connections and adjustments have been made for grain taken out of these elevators for local consumption. Freight carried to ports on local rates has been reported as unloaded at stations although it might subsequently be exported by water routes. Grain unloaded at the elevators at the head of the lakes and later forwarded to Montreal by boat is reported as unloaded at stations in Ontario and does not again enter into the railway records, and consequently affects the net imports into the province. Also western grain ground in Ontario will increase the imports of grain since it is reported out as flour. Other provinces are similarly affected but to a less degree.

These data cover only railway revenue freight and the differences between column 1, freight loaded, and column 6, freight unloaded, are the net imports and exports by rail into and out of the respective provinces. If the loadings exceed the unloadings the data show a net export and if the unloadings exceed the loadings the excess is an import, irrespective of how often the same freight is loaded or unloaded. Except for freight handled by water, these data give a very complete picture of the movement of freight in Canada, and, in the Prairie Provinces, where practically all freight is handled by rail, the net imports and exports cover all imports and exports into and out of these provinces.

A commodity may be imported and exported in another form such as wheat and flour, pulpwood and paper, etc., so that the net imports might be exported as other commodities.

Railways crossing the United States border consider their lines in the United States as foreign connections and show freight coming into Canada as received from foreign connections and freight crossing into the United States as freight delivered to foreign connections. Freight delivered to foreign connections includes exports from Canada and also in-transit freight which has been received from foreign connections, rail and water, destined to foreign points and which is shown in column 3. This in-transit traffic is heaviest between Detroit and St. Claire river gateways and the Niagara river gateways. There is also a considerable traffic from the western states through to Quebec ports and a lesser amount from the Pacific coast.

Canadian railways carried less freight during 1933 than for any previous year in the past two decades and the total of 57,099,111 tons was less than half of the record tonnage of 118,652,969 tons carried in 1928. Compared with 1932 traffic it was a decrease of 3,368,982 tons, or 5.5 per cent. Wheat alone accounted for 2,287,615 tons, or 68 per cent of this decrease. All other grains except corn also showed declines and, with only small gains in cotton, apples, potatoes and other agricultural products, total agricultural products amounted to 16,155,900 tons as against 18,856,017 tons in 1932. Animal products were heavier than in 1932 by 138,365 tons, or 6.4 per cent. Despite substantial increases in coke, other ores and concentrates, base bullion and matte (non-ferrous metals) and other mine products, the total of mine products, amounting to 18,441,982 tons, was down by 1,064,516 tons. Sand and gravel and stone, both crushed and dimension, were particularly light and anthracite, bituminous and lignite coal, combined, accounted for a loss of 744,187 tons. Logs, posts, poles and piling and ties were lighter than in 1932 but all other forest products recorded increases and the total of 6,035,153 tons was larger by 508,125 tons, or 9.2 per cent. Pulpwood was particularly heavy during the last seven months, finishing the year with an increase of 113,168 tons after having a decrease of 246,435 tons at the end of May. Newsprint paper also began recording increases in June and, with a decrease of 153,356 tons on May 31st, showed an increase on December 31st of 12,534 tons. Wood pulp shipments started increasing a month earlier and, with a decrease of 29,185 tons on April 30th, finished the year with a gain of 156,896 tons, or 27 per cent. Automobiles, trucks and parts increased from 774,139 tons to 935,189 tons, or by 21 per cent, Canadian loadings, imports and in-transit freight all being heavier than in 1932. Gasoline shipments decreased by 199,281 tons, or 15 per cent. Possibly more of this freight is being diverted to motor trucks and boats.

On pages 24-27 are two tables, one for the three Maritime Provinces and one for the four western provinces. The net exports and imports from and to these areas are the differences between loadings and unloadings, but the net movement to and from other provinces is the difference between freight originated, including loadings and receipts from foreign connections, and freight terminated, including freight unloaded and delivered to foreign connections. If the freight originated in the Maritime Provinces exceeded the freight terminated the difference must have been carried westward, either for unloading in the other provinces or for delivery to foreign connections at a junction point in Quebec or provinces west. Also, if the terminated freight exceeded the originated, the difference came in across the Quebec boundary.

The eastward movement of wheat and other grains into the Maritime Provinces was lighter than in 1932 but animal products, particularly cattle and calves and packing house products showed substantial gains. The net westward shipments of sugar from the Maritime Provinces increased from 43,054 tons to 48,572 tons, but pig iron and structural iron and steel showed smaller shipments westward. Westward shipments of newsprint paper decreased from 134,172 tons in 1932 to 79,971 tons, but wood pulp shipments increased from 21,831 tons to 36,596 tons.

The heavy eastward movement from the western provinces is grain. Of a total of 10,671,095 tons of agricultural products originated, 6,063,981 tons were shipped east, 2,433,391 tons were delivered to foreign connections and 2,173,723 tons were unloaded within the provinces. Substantial increases were recorded in eastward shipments of

nearly all the animal products listed and the total showed a gain of 31,259 tons, or 19 per cent. The net movement of bituminous coal was eastward instead of into the area as in 1932. Eastward shipments of cordwood were also much heavier than in 1932, increasing from 6,948 to 25,521 tons. Pulpwood shipments out of the area also increased from 3,182 to 46,823 tons. Shipments of agricultural implements from the eastern provinces increased from 7,894 tons in 1932 to 12,992 tons, shipments of automobiles, trucks and parts from the east increased from 15,394 tons to 17,666 tons and newspaper tonnage increased from 36,675 to 81,474 tons, all of this increase being in paper for exports via western ports.
