The first part of the chapter discusses the importance of maintaining accurate records of all transactions. It emphasizes the need for a systematic approach to bookkeeping, starting with the identification of all sources of income and expenses. The text then moves on to describe the various methods used to record these transactions, including the use of journals and ledgers. It also covers the process of reconciling bank statements and preparing financial statements. The latter part of the chapter focuses on the analysis of these statements to determine the financial health of the business. It discusses the calculation of key ratios and the interpretation of the results. The chapter concludes with a summary of the main points and a list of exercises for the reader to practice.

DOMINION BUREAU OF STATISTICS

STEAM RAILWAY STATISTICS

1 9 4 1

For the third time in their history the railways earned more than five hundred million dollars. The total for 1941 was \$538,291,947 and was second only to \$563,752,260 earned in 1928. Freight revenues at \$421,407,313 were a new high record, exceeding the previous peak made in 1928 by \$7,821,329. Although passenger traffic measured in revenue passenger miles was the heaviest since 1920, reduced rates produced passenger revenues considerably below those of 1917 to 1930 inclusive. Compared with 1928 passenger miles were up by 2 p.c., but revenues were down by 29 p.c., and compared with the peak year, 1920, passenger miles were down by 9 p.c., and revenues were down by 42 p.c.

Total operating revenues increased 25.5 p.c. over those of 1940 and operating expenses increased by 20.4 p.c., producing net operating revenues of \$134,558,405, the largest to date, which is comparable with \$93,855,156 for 1940 and \$121,030,980 for 1928. The income and excess profits tax was the main factor in increasing taxes to \$25,045,411 as compared with \$14,460,697 in 1940 and \$11,131,594 in 1928. Interest on funded and unfunded debt amounted to \$78,632,039 as compared with \$79,786,267 in 1940, and after adjusting for revisions in interest accrued on Dominion Government advances to the Canadian National Railways to the 1941 basis it is comparable with \$65,822,828 in 1928.

The net corporate income available for dividends, sinking funds and reserves, etc. amounted to \$40,403,934 as compared with \$3,759,598 in 1940, and after adjustment for Canadian National interest on Government advances, \$57,313,151 in 1928 and a debit of \$62,634,775 in 1932, the worst year experienced by the railways.

Freight train miles increased over 1940 by 22.6 p.c. for an increase in car miles of 25.5 p.c., and in revenue ton miles of 31.9 p.c. An indication of faster movement is time worked by road freight conductors which increased only 18.8 p.c. The average freight revenue per ton mile was only 0.843 cent which was the lowest since 1918 before the general rate increases became effective. This was due to reductions in rates and to a large increase in tonnage of low rate freight and in long haul freight. The tonnage of wheat

was by far the heaviest back to 1928, and the average haul for all revenue freight increased to 428 miles as against 387 miles in 1940, 351 miles in 1928 and 304 miles in 1929.

Passenger traffic showed a much greater increase in 1941 than in 1940, the increases being 47 and 24 p.c. respectively. Passenger train miles increased by 16.6 p.c., car miles by 15.2 p.c., and the time worked by road passenger conductors by 9.3 p.c. The average revenue per passenger mile was reduced to 1.86 cents, which is the lowest on record (back to 1907). Reduced rates to the armed forces was the main factor in this decrease.

The number of employees increased from 135,700 in 1940 to 148,746 or by 9.6 p.c., and the pay roll increased from \$214,505,163 to \$252,398,865 or by 17.6 p.c. The number of employees is the average of 12 counts made on the 15th of each month or week day following the 15th, and consequently represents the number of full-time positions.

Comparisons with 1929 data, the year of highest railway employment, show a decrease of 22.6 p.c. in general and miscellaneous employees and a decrease of 17.0 p.c. in wages. Maintenance of way and structures employees decreased by 28.1 p.c. for a decrease in wages of 21.5 p.c., maintenance of equipment employees decreased by 25.4 p.c. for a decrease in wages of 18.4 p.c., and transportation employees decreased by 12.1 p.c. for a decrease in wages of 6.9 p.c.

A comparison of train crew data for 1929 shows that men employed as road passenger conductors, brakemen, baggagemen, flagmen, engineers, motormen, firemen and helpers decreased in number by 23.2 p.c., man hours worked decreased by 30.3 p.c. and wages decreased by 17.6 p.c. The ratio of decrease of wages to decrease of men was approximately the same as for the general and miscellaneous and maintenance employees.

Men employed as road freight conductors, brakemen, flagmen, engineers, motormen, firemen and helpers declined in number by only 8.2 p.c., man hours worked decreased by 20.2 p.c. and wages decreased by only 3.0 p.c. The gross ton miles moved by these crews increased by 55 p.c., and revenue ton miles increased by 43 p.c.

These data give some indication of the increased efficiency in railway operation during these 15 years by the use of heavier and faster locomotives and improved track, signals, dispatching and operation in general. Freight cars continued to increase in average capacity but the number has decreased for the past decade; the decrease in box cars since 1931 has been 40,707 in number or

27 p.c., and 1,260,933 tons or 21 p.c. in capacity. Passenger equipment has also continued to decline. The number of first class passenger cars has declined from 1,975 in 1931 to 1,886 in 1941 or by 4.5 p.c., parlour and sleeping cars declined from 1,545 to 1,123 or by 27 p.c., and total passenger train cars from 7,611 to 6,235 or by 18 p.c.

Consumption of coal by locomotives increased from 8,138,688 tons in 1940 to 9,988,171 tons, but the consumption of gasoline and diesel oil declined by 12 p.c., but it is a small part of the total fuel used. The average consumption of coal per gross ton mile hauled by freight locomotives was reduced by nearly 15 p.c. from 1928 to 1941.

During the year 576 persons were killed in train accidents as compared with 275 in 1940 and 479 in 1928. The number of employees included in these totals increased from 49 in 1940 to 88, passengers from 5 to 10 and trespassers from 95 to 130. The number of persons injured increased from 2,070 in 1940 to 2,756, trainmen accounting for 287 and trackmen for 35 of the increase.

There were also 27 persons killed and 6,790 injured in non-train accidents such as handling material in machine shops, etc.

In accidents at railway - highway crossings 136 persons were killed, the largest number since 1928, and 450 were injured, the largest number since 1929. The majority of these were motorists in accidents at unprotected crossings, although there were 3 persons killed and 8 injured at crossings protected by gates, and 20 killed and 61 injured at crossings protected by bells.

To reduce expenses the report has been prepared in the present form and data for previous years have been omitted in the summary tables. Also data contained in tables 1 to 19 inclusive, have not been repeated in these summary tables.
