RAILWAY TRANSPORT

1963

PART IV

(Operating and Traffic Statistics)

Presented herein are operating and traffic statistics of twenty-seven common carrier railways in Canada. Statistics of the Cartier Railway Company, while not shown in Part II of this annual series due to the non-availability of financial data, are contained in this report.

A common carrier is defined as one who holds himself out to the general public to transport passengers and goods for compensation.

Passenger and Freight Traffic

Rail intercity and commutation passenger traffic, which began an upward trend in 1962 after seventeen consecutive years of decline, continued to increase in 1963, rising 7.2 per cent to 20,635,664. An improvement was also shown in passenger-miles which advanced 2.5 per cent to 2,069,565,120, but the average passenger journey at 100 miles was five miles shorter than that of the previous year.

Passenger train-miles and car-miles, which have been reduced 40.0 per cent and 36.1 per cent respectively since the end of World War II, aggregated 28,239,484 and 285,942,217 in 1963, down from 29,217,253 and 296,949,671 a year earlier.

The volume of revenue freight carried by rail in 1963, including traffic received from Canadian connections, increased 4.6 per cent to 194,515,000 tons. Ton-miles rose 11.6 per cent during the same period to 75,796,023,037 and the average length of

haul was up to 390 miles from 365 in 1962. The principal contributors to increased freight during the year under review were export grain shipments, iron ore and new potash movements. (See DBS "Railway Transport Part V, 1963" for a detailed commodity analysis).

Freight car mileage in 1963, loaded and empty (caboose excluded), was 3,406,645,650, a 6.5 per cent increase over the previous year and freight train mileage at 62,639,073 was 3.9 per cent above 1962. The average speed of freight trains in 1963 was 20.0 miles per hour, up from 18.3 m.p.h. ten years earlier. It should be noted that these averages are somewhat below actual running speeds due to the inclusion of time spent in switching, picking up and setting out cars, etc.

Locomotive-miles

Locomotive-miles generated in transportation service (exclusive of switching) totalled 86,981,990 in 1963, up 1.9 per cent from 1962. In the year under review 63,898,270 or 73.5 per cent were produced in freight service (61,346,152 a year earlier) while 23,083,720 or 26.5 per cent (24,003,727) resulted from passenger operations. In 1963 diesel power performed 99.7 per cent or 86,684,651 of total locomotive-miles while other, motive equipment, mainly of the electric type, accounted for the remaining 0.3 per cent or 297,339 miles. Locomotive-miles generated in road and yard switching aggregated 28,258,169 of which 88.5 per cent were run in the performance of yard switching services.

August 25, 1964.
