Dominion Bureau of Statistics, or to the Queen's Printer, Ottawa,
Canada.*

PREFACE

Annual railway transport statistics in Canada are published in a series of six reports each of which covers specific aspects of the industry; services and equipment available, traffic handled, the labour force involved and the financial aspects of railways operating in this country.

Statistics on railways have been collected and published in Canada since 1875, first by the Department of Railways and Canals until 1918, and by the Dominion Bureau of Statistics since its inception in 1918. During this time the data have been published in varying degrees of detail. Until 1950 one volume contained all railway statistical data. In 1951 there were three; 1952-1957 there were five, and since 1958 six separate parts have been required to reflect these annual operations. The present six-part report encompasses the following:

- Part I. Railway Transport - Summary Statistics (Five years)
- II. Railway Transport - Financial Statistics
- III. Railway Transport - Equipment, Track and Fuel Statistics
- IV. Railway Transport - Operating and Traffic Statistics
- V. Railway Transport - Commodity Statistics
- VI. Railway Transport - Employment Statistics

These reports are not necessarily released in the order in which they are numbered. Several other annual reports and three periodicals dealing with rail transportation are also available. A list of all titles published in this field is located on the inside cover of each report.

The Dominion Bureau of Statistics is indebted to the individual railway companies operating across the nation which have prepared and submitted their data for inclusion in this statistical series; to the Railway Association of Canada for its cooperation; and to the Board of Transport Commissioners for Canada, with which joint collection arrangements exist, for their promotion of the uniform accounting principles used for rail statistical purposes.

This report has been prepared by the Transportation and Public Utilities Section of the Governments and Transportation Division of the Dominion Bureau of Statistics. Any inquiries or comments respecting data contained herein, or to unpublished detail, should be forwarded to this Section.

WALTER E. DUFFETT,
Dominion Statistician.

SYMBOLS

The following standard symbols are used in Dominion Bureau of Statistics publications:

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- amount too small to be expressed.
- p preliminary figures.
- r revised figures.

RAILWAY TRANSPORT

1965

PART IV

(Operating and Traffic Statistics)

Introduction

Presented herein are operating and traffic statistics of common carrier railways in Canada during 1965. The term "common carrier", as referred to in this series, indicates any railway which holds itself out to the general public to transport passengers and/or goods for compensation.

Due to the non-availability of financial and employee compensation data relative to the Cartier Railway, for inclusion in Parts II and VI of this six part annual series, details relating to the physical work performed by that railway are shown independently in the last line of each table to permit an easier interrelationship of statistics in all parts of the report.

Operations of the Wabush Lake Railway and the Arnaud Railway are included in this series in 1965 for the first time, while those of the Greater Winnipeg Railway have been dropped.

All common carrier railways in Canada are divided into four classes for accounting and statistical purposes as follows: Class I, Canadian National Railways and Canadian Pacific Railway Company; Class II, other carriers having average gross operating revenues of \$500,000 or more annually; Class III, those having operating revenues of less than \$500,000; and Class IV, other railway companies such as terminal, bridge, tunnel and pullman.

Analysis

The number of paying passengers carried by railways in Canada in 1965 totalled 24.6 million, up 7.4 per cent over the previous year and 31.0 per cent over the 1961 low of 18.8 million. This revival of rail patronage is due mainly to the efforts of the Canadian National Railways to stimulate passenger travel through improved services, fare adjustments and to incentive fare plans which relate prices to high and low traffic patterns and to distance.

Total revenue passenger-miles at 2,664 million in 1965 declined 0.6 per cent from the previous year, but were up 35.9 per cent over the 1961 low. Compared with 1964, commutation travel, measured in passenger-miles was up 12.0 per cent while non-commutation travel declined 0.9 per cent. The average length of journey for all passengers measured 108 miles; 9 miles shorter than in the previous year.

Revenue carload and less-than-carload freight carried by railways during the year under review, including traffic interchanged between Canadian lines, rose 7.9 per cent of 228.2 million tons over 1964. The principal commodities contributing to this increase in volume were iron ore, copper-

nickel-ores and concentrates and pulpwood. For a complete analysis of commodity data see, "Railway Transport, Part V, 1965", Catalogue No. 52-211.

Ton-miles of railway freight in 1965 increased 2.5 per cent to 87.2 billion; a new record for a peacetime year. The 1965 ton-mile figure exceeded the previous record of 85.0 billion ton-miles set in 1964.

Statistics of freight train performance reflect trends toward heavier loads in larger cars, longer trains, faster speeds and more powerful motive equipment. In 1965, freight car miles in freight trains (excluding cabooses) remained at the previous year level of 3.7 billion, while freight train miles at 68.0 million were 1.8 per cent higher than in 1964. The average freight train in 1965 was comprised of 56.0 cars (56.4 cars in 1964) and a caboose, and on the average 33.8 of the cars (34.1 in 1964) were loaded, while 21.2 (21.3) were empty. Continuing gradual increases in the capacities of modern freight cars and the resultant tendencies to load heavier are evident in train weight figures. In 1965, the gross weight of cars and contents in the average freight train was 2,699 tons, up from 2,682 in 1964. The average net tons per freight train was 1,283 in 1965 compared with 1,273 tons a year earlier. Despite the increased weight in 1965 average speed of freight trains was a record 20.5 miles-per-hour, up slightly from 20.3 m.p.h. in 1964. The average as indicated here is considerably below actual running speeds since it includes time spent picking up and setting out cars, meeting opposing trains, etc.

Gross ton-miles per freight train hour, an index which combines both train load (including the weight of cars and contents) and train speed, averaged 55,211 in 1965 up from 54,466 in 1964. This overall measure of freight train performance has increased 60 per cent since 1955.

Indicators of freight car utilization show that the average load per freight car in 1965, as measured by the net ton-miles per loaded car mile, was 38.0 net tons, an increase of 0.8 tons over the preceding year and up nearly 7 tons over the corresponding average ten years earlier. This average includes carload freight and less-than-carload traffic.

Locomotive miles generated in total transportation service, exclusive of switching, totalled 93.9 million in 1965, up 2.0 per cent over the previous year. During the year under review, 69.2 million or 73.7 per cent occurred in freight service (68.0 million in 1964), while 24.7 million or 26.3 per cent (24.1 million) were produced in passenger operations. In 1965, diesel power performed 99.7 per cent of all locomotive-miles, while electric motive power accounted for most of the remaining 0.3 per cent. Locomotive-miles generated in road and yard switching services totalled 29.7 million.
