PREFACE

Annual railway transport statistics in Canada are published in a series of six reports each of which covers specific aspects of the industry; services and equipment available, traffic handled, the labour force involved and the financial aspects of railways operating in this country.

Statistics on railways have been collected and published in Canada since 1875, first by the Department of Railways and Canals until 1918, and by the Dominion Bureau of Statistics since its inception in 1918. During this time the data have been published in varying degrees of detail. Until 1950 one volume contained all railway statistical data. In 1951 there were three; 1952-1957 there were five, and since 1958 six separate parts have been required to reflect these annual operations. The present report encompasses the following six parts which are not necessarily released in the order they are numbered.

- Part I. Railway Transport Summary Statistics (Five years)
 - II. Railway Transport Financial Statistics
 - III. Railway Transport Equipment, Track and Fuel Statistics
 - IV. Railway Transport Operating and Traffic Statistics
 - V. Railway Transport Commodity Statistics
 - VI. Railway Transport Employment Statistics

Several other annual reports and three periodicals dealing with rail transportation are also available. A list of all titles published in this field is located on the inside cover of each report.

The Dominion Bureau of Statistics is indebted to the individual railway companies operating across the nation which have prepared and submitted their data for inclusion in this statistical series; to the Railway Association of Canada for its cooperation; and to the Railway Transport Committee of the Canadian Transport Commission, with which joint collection arrangements exist, for their promotion of the uniform accounting principles used for rail statistical purposes.

This report has been prepared by the Transportation Section of the Transportation and Public Utilities Division of Dominion Bureau of Statistics. Any inquiries or comments respecting data contained herein, or to unpublished detail, should be forwarded to this Section.

> WALTER E. DUFFETT, Dominion Statistician.

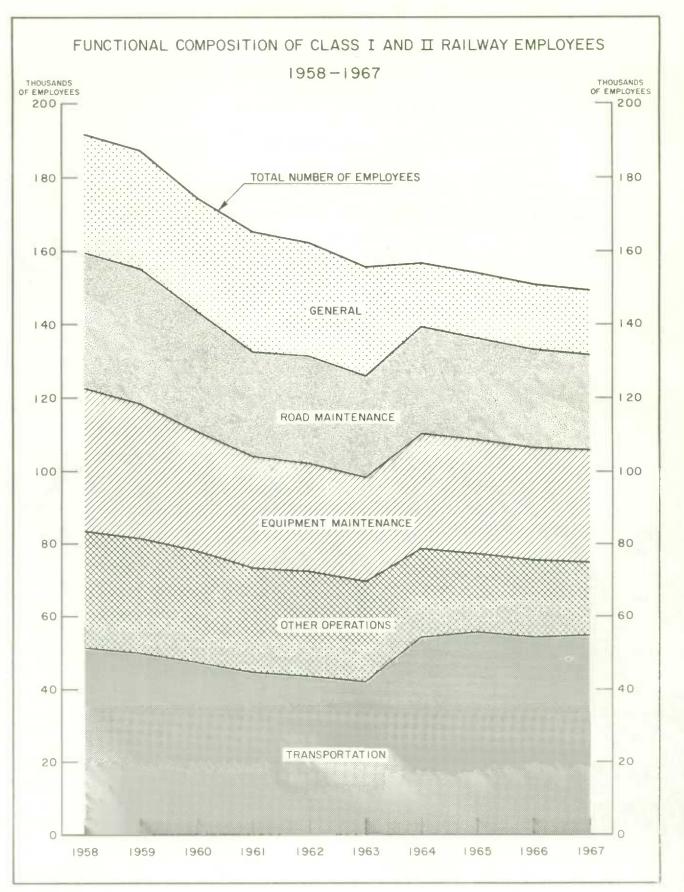

SYMBOLS

The following standard symbols are used in Dominion Bureau of Statistics publications:

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- -- amount too small to be expressed.
- P preliminary figures.

RAILWAY TRANSPORT

1967

PART VI

(Employment Statistics)

Introduction

Employment data contained in this report pertain to common carrier railways operating in Canada during 1967. A "common carrier" refers to a railway which holds itself out to the general public to transport passengers and/or goods for compensation.

The statistics presented in this publication have been reported in accordance with the Uniform Canadian Classification of Railway Employees which was introduced January 1, 1964.

The structure of the Uniform Canadian Classification of Railway Employees is designed to classify all rail occupations primarily on the nature of work done, into major and minor occupational classes, within functions. The latter means that all supervisory, professional and clerical positions are classified to the functional groups (road maintenance, equipment and transportation) with which they are associated rather than being included in the General group as was the case in the previous classification used between 1956 and 1963. See page 23 for definitions of railway functions.

A reconciliation key is presented on pages 19 to 23 of this report showing the relationship between reporting divisions in the Canadian Classification of Railway Employees and their Compensation (1956) and occupational classes in the Uniform Canadian Classification of Railway Employees (1964). While many of the individual occupational classes in the various functions are directly comparable, it has been necessary to group other classes to afford the best possible bridge between the two classifications.

For the average number of employees two methods of counting are permissible under the Uniform Canadian Classification of Railway Employees. These are based on: (a) a mid-month count of employees on payroll, or (b) the sum of the total number of employees who work a specified number of days in the first semi-monthly pay period divided by two, plus all employees paid once a month. Prior to 1964, the count of employees was taken at a fixed date each month, although the Canadian National Railways adopted the alternative method soled above for reporting from 1963. Monthly and annual comparisons of CNR counts, taken both ways, have indicated that method tends to reduce employee averages by about three per cent.

In the 1967 statistics presented herein, the Canadian National Railways employee average was based on the method of counting mentioned in (b) above, while the Canadian Pacific Railway Company continues their count on the former midmonth basis.

Service hours paid for are shown separately herein, by occupation, in accordance with the Uniform Canadian Classification of Railway Employees. The number of hours actually worked, details of which were given by individual occupational class prior to 1964 under the heading "time on duty", are now available by functional group totals only and are presented in the following table:

Function	Hours actually worked, 1967
General	34, 131, 389
Road maintenance	54, 399, 100
Equipment maintenance	60, 577, 328
Transportation	110, 383, 277
Total	259, 491, 094
Other operations	40, 282, 134
Grand total	299, 773, 228

Hours paid for include time actually worked plus vacations, holidays, and leaves of absence, when paid for, and apply to all employees, including enginemen and trainmen paid on the basis of trips or miles run and employees paid at piece rates.

Under "Total compensation" is the gross amount paid to employees and charged to operating, capital and other accounts and other companies and individuals. including vacations, holidays and leaves of absence, with pay and before deductions for income tax, unemployment insurance contributions, etc. Total compensation does not include retroactive wage increases (see table on page 7) or certain fringe benefits.

In view of the alternative methods now in use to count employees and the new classification principle implemented in 1964, caution should be exercised in making historical comparisons with pre-1964 railway employment statistics.

To eliminate duplicate reporting and to uncover statistical gaps, the Dominion Bureau of Statistics uses the Canadian Standard Industrial Classification (S.I.C.).

The Standard Industrial Classification (Catalogue No. 12-501) provides a set of groups and classes suitable for the compilation of statistics related to different industries. The building block (reporting unit) which is fitted into the above structure is the "establishment". An establishment can be defined as the smallest unit which is a separate operating entity capable of reporting principal elements of input and output. While the establishment is typically a factory, mine, store or similar unit and in most cases is a separate firm, it may encompass two or more operating units which are not necessarily in the same location. It can also be an individual working on his own account.

Industry 506, Railway Transport, as classified in the S.I.C. includes establishments primarily engaged in operating railways. The kinds of activities normally carried on by railway establishments embraces the operation of commuter service (but not street railways), maintenance of way and structures, maintenance of equipment (including that carried on in railway shops) dining car and sleeping car services, freight, express and the operation of railway terminal facilities. Road transportation services operated by railway establishments and providing pick-up and delivery for the freight or express services of the railway are included in this industry but long distance trucking owned by railway companies is usually set up as separate establishments classified to the trucking industry. The Railway Transport Industry (506) is represented in this report by occupational classes numbered 1-79 plus class 80.

Telecommunications services provided the public by railways are included, in detail, in S.I.C. Industry **544 Telephone Systems** and **545 Telegraph** and Cable Systems. Highway Transport (Rail) Operations are classified to S.I.C. Industry **507 Truck Transport** and Outside Operations, as shown herein, are treated as separate industries and establishments and included under various S.I.C. codes. Hotels, for example, which are included under Outside Operations, are classified to S.I.C. Industry **875 Hotels Restaurants and Taverns**. Grand totals of divisions 1 to 83 throughout this report include details relating to employees residing outside Canada whose salaries and wases are charged to Canadian operations.

Statistical Analysis

Companies conducting railway, express, highway transport (rail) services, telecommunications and other operations in Canada employed an average 150,218 persons during 1967, down 0.9 per cent from the previous year. With the exception of 1964, the 1967 decline in rail employment was the 10th in succession and brought the cumulative decrease since 1956 to nearly 30 per cent. At the same time total compensation, increased by \$74 million in 1967 over 1966 and by \$162 million since 1956.

Average annual earnings per rail employee rose by \$547 in 1967 to \$6,274 not including fringe benefits, and the average hourly wage was \$2.86, an increase of 25 cents per hour over 1966. In 1956 the comparable average wage was \$1.76 per hour and \$3,623 per year.

Total compensation for 1967 excluded \$357,028 in retroactive salaries and wages related to a prior period of which approximately \$200,000 was applicable to the transportation function.

Negotiations which followed the railway strike in August-September, 1966, resulted in agreements being signed early in 1967 with most of the nonoperating unions. These agreements provided for basic wage increases totalling 24 per cent, spread over the three-year period of the contracts, January 1, 1966 to December 31, 1968, and for bereavement lease, improved annual vacations, increased life insurance and extended weekly indemnity payments on account of sickness and accident under the employee health and welfare plan.

The Canadian Pacific Railway Company (using a mid-month count of employees) reported an average of 53,547 persons on payroll during 1967, down 3.8 per cent from the preceding year while compensation totalled \$323,943,997, an increase of 5.6 per cent over 1966. On the average C.P.R. employee-hours paid for amounted to 2,149 (2,143 a year earlier) and earnings averaged \$2.82 (\$2.57) per hour or \$6,050 (\$5,513) per year.

Canadian National employed an average 86,200 persons in rail transportation service during 1967, up 0.8 per cent from 1966. Earnings totalled \$550, 049,038 as against \$497,849,970 in the earlier year and the average hourly and annual wage was \$2.87 and \$6,381 respectively. In contrast to \$2.61 and \$5,820 in 1966.

Employment on Class II railway lines in 1967 Index of Average Salaries and Wages carriers other than CNR and CPR having average gtoss revenues of \$500,000 or more annually) increased to 9,914 from 9,816. The average hours paid for at 2,151 was down by 15 hours, while the average hourly wage rose to \$3.07 from \$2.86. Annual earnings rose to \$6,609 from \$6,192.

The following table shows the relative increase in railway salaries and wages, by function, in 1966 and 1967. Averages of the years 1956, 1957 and 1958 have been used as a base in the calculation of this index.

of Class I and II Railways, 1966 and 1967

Function	In	dex

TABLE 7. Relationship Between the 1956 and 1964 Railway Employee Classifications - Continued

¹ These classifications include employees engaged in integrated express, and less carload operations. They were formerly included in Express, Cartage and Highway Transport (rail) services, Divisions 81, 82 and 83, respectively.

	1956 Division Number and Reporting Division	1	1964 Division Number (Code Number) and Occupational Classification					
OTHER OPERATIONS								
80	Communications	82 (891)	Telecommunications					
81	Express	80 (691)	Express					
82	Cartage							
83	Highway transport (rail)	81 (791)	Highway transport (rail)					
84	Outside operations	83 (991)	Outside operations					

TABLE 7. Relationship Between the 1956 and 1964 Railway Employee Classifications - Concluded

DEFINITIONS OF RAILWAY FUNCTIONS

CENERAL - Includes all functions or departments except those separately defined below. Included in this group are such departments as; Research and Development, Accounting and Finance, Personnel and Labour Relations, Purchases and Stores, Sales, Traffic, Investigation, etc.

ROAD MAINTENANCE – This function is responsible for the construction and maintenance of all track and structures and signal installations.

EQUIPMENT MAINTENANCE - This function is responsible for the maintenance and servicing of all motive power, car, shop and power plant equipment.

TRANSPORTATION (NON-TRAIN AND TRAIN) — This function is responsible for scheduling, dispatching and operating trains and other ancillary services, the operation of terminal facilities and the distribution of cars and motive power. This function is also responsible for the movement of merchandise by means of the integration of express and less carload operations.

EXPRESS - This function is responsible for non-integrated express operations.

HIGHWAY TRANSPORT (RAIL) - This function is responsible for non-integrated cartage and highway services ancillary to rail operations.

TELECOMMUNICATIONS - This function is responsible for all telecommunications operations.

OUTSIDE OPERATIONS - This function includes such operations as hotels which are operated both as to revenues and expenses separate and apart from schual rail operations.

ROGER DUHAMEL, F.R.S.C., Queen's Printer and Controller of Stationery, Ottawa
