MOTOR TRANSPORT TRAFFIC - NATIONAL ESTIMATES

FOURTH QUARTER 1963

This quarterly publication has been designed to provide commodity detail which has become available from the sample surveys of commercial motor vehicles conducted in each of the ten provinces on a continuing quarterly basis. For a complete description of the original design of the sample as well as the methods and procedures, reference should be made to the publication "Motor Transport Traffic - National Estimates, 1957," Catalogue No. 53-207. Improvements and modifications in the original procedures are explained in the annual National Estimates for later years.

The quarterly series covers the operation of intercity vehicles, both private and for hire, but it should be noted that urban services of these vehicles are necessarily included. The operations of vehicles classed as farm and urban are described in the annual Motor Transport Traffic reports but are excluded from this publication. For both for hire and private intercity vehicles data are broken down to show operations on trips up to and including 50 miles and on trips over 50 miles as well as total operations.

Beginning with the first quarter of 1961 the description of commodities transported by trucks has been changed to conform with the revised "Standard Commodity Classification" produced by the Dominion Bureau of Statistics. Formerly commodities were classified according to the "Railway Freight Commodity Statistics Classification". The change will enable these data to be compared more easily with other commodity data produced by the Dominion Bureau of Statistics.

Commodities are shown in five major groups: (i) live animals, (ii) food, feed, beverages, and tobacco, (iii) crude materials, inedible, (iv) fabricated materials, inedible, and (v) end products, inedible. Commodities shown separately in quarterly Motor Transport Traffic reports prior to 1961 were those transported in large volume. These commodities will continue to be shown individually and in many cases the description of such commodities was only slightly changed in the revised classification.

Where sufficient descriptive detail was not reported for a particular item or the quantity carried was not sufficiently large to be shown separately, it was necessary to assign it to an n.e.s. (not elsewhere specified) class. In addition mixed truckloads of goods which were within the same commodity group were assigned to the n.e.s. class for that group. However, when the commodities reported for a mixed truckload belonged to more than one of the five main commodity groups, they have been assigned to the "General Freight" group. Therefore, the totals shown for individual commodities are understated in proportion to the amount of that commodity which, of necessity, was assigned to one of these general classes.

To be shown separately 100,000 tons of a commodity should be transported within the quarter. However to preserve continuity and enable comparisons to be made with previous quarters data are shown individually for some commodities which fall short of this mark.

The results of the provincial sample surveys were expanded to represent the estimated truck population for the thirteen weeks of the quarter and combined for a Canada total. Weight of goods carried, miles travelled with load, net ton miles and revenue have been rounded to thousands and average distance per ton has been rounded to tens. Averages were calculated before the figures were rounded. The data in this report are estimates subject to sampling error. As time has not permitted a study of the reliability of the detailed information, the data should be used with caution.

Glossary of Terms

Average distance per ton - average distance each ton was carried. Net ton miles divided by the total weight of goods carried.

Average weight carried - total net ton miles performed divided by miles travelled with load.

For hire vehicles - those vehicles (common and contract) which were operated for compensation on intercity and rural routes and, in most provinces, were identified by a distinct series of licence plate numbers.

Net ton miles - average weight of goods carried per trip multiplied by the number of loaded miles.

N.e.s. - not elsewhere specified. (As a result of insufficient descriptive detail for some of the commodities recorded in the questionnaires, it has been necessary to assign these commodities to the n.e.s. classes rather than to a more specific class.)

Private intercity vehicles - privately owned trucks (both intercity and rural) which were operated beyond urban areas and were not used directly in connection with farm operations.

Weight of goods carried - total weight of goods loaded on the vehicles.

For Hire Trucks

In the fourth quarter of 1963 for hire trucks carried an estimated 52,471,000 tons of goods compared with 53,818,000 in the same quarter of 1962, a decrease of 3 per cent. Although less tonnage was carried than in the same quarter of the previous year, the average distance each ton was carried increased 7 per cent to 62 miles from 58 miles. This resulted in a slight increase of 3 per cent in the net ton miles performed - 3,247,311,000 compared to 3,141,215,000 in the corresponding quarter of 1962.

The revenue received from the transportation of these goods increased 13 per cent to \$221,139,000 from \$192,015,000 and the revenue per ton mile rose to 6.8 cents from 6.1 cents for the same period of 1962.

For trips over 50 miles, fabricated materials, inedible, and general freight accounted respectively for 34 and 23 per cent of the weight of goods carried, 25 and 37 per cent of the net ton miles performed and 20 and 36 per cent of the revenue for these for hire trucks.

Private Intercity Trucks

Private intercity vehicles in the fourth quarter of 1963 carried an estimated 33,085,000 tons of goods compared with 39,314,000 tons in the fourth quarter of 1962, a decrease of 16 per cent. The average weight of goods carried dropped to 4.5 from 5.1 tons while the average distance each ton was carried rose to 34 miles from 28 miles; consequently net ton miles for the fourth quarter increased 2 per cent to 1,134,689,000 from 1,110,747,000 in the same quarter of 1962.

For trips over 50 miles fabricated materials, inedible and food, feed, beverages and tobacco accounted respectively for 35 and 31 per cent of the weight of goods carried and 36 and 32 per cent of the net ton miles performed by these private intercity trucks.
