Vol. 46, No. 4

SUMMARY OF CANAL STATISTICS

APRIL 1965

Changes in presentation

Commencing with this publication, some changes will be evident in the presentation of monthly canal statistics:

- (1) The description of commodities has been changed to conform with the other publications dealing with water transportation.
- (2) The format of the text has been changed. It now consists of an analysis of the statistics contained in the four tables. Important changes in data, and reasons for these changes, where verifiable, will be noted.

Analysis of data

The opening dates for the three major canals in 1965 were as follows: St. Lawrence Canals, April 8 (April 8 in 1964); Welland Canal, April 1 (April 1); and the Canadian lock of the Sault Ste. Marie Canal, April 7 (April 13).

The total volume of freight transported through all Canadian canals in April 1965 decreased 16.3 per cent, to 6,078,799 tons from the 7,263,854 tons recorded in April 1964. Severe ice conditions and a major decline in wheat shipments resulted in a slow start to the 1965 canal navigation season, compared to the beginning of the season in 1964.

Total traffic recorded through the St. Lawrence Canals declined 11.5 per cent this month, to 2,910,447 tons from 3,288,630 tons in April of last year. At the Welland Canal total traffic was 20.2 per cent below the 1964 figure of 3,942,301 tons.

Shipments of wheat through the St. Lawrence and Welland Canals totalled 688,515 tons and 325,943 tons, respectively, compared to 1,145,052 tons and 989,645 tons in 1964, and 513,697 tons and 425,047 tons in April 1963. The relatively-larger difference between shipments of wheat through the St. Lawrence Canals compared to the Welland Canal in 1965 is accounted for by increased winter storage at Lake Ontario ports. The large figures for 1964 reflect the major wheat shipments to the U.S.S.R., which began in October 1963 and terminated in July 1964.

Total traffic through the Welland Canal also declined because of decreases in downbound shipments of corn and dried vegetables.

While the two major canals recorded a large decrease in downbound movements, they also recorded a small increase in upbound traffic, mainly as a result of the increased transportation of steel plate, sheet and strip, which was destined for U.S. Great Lakes ports.

The total volume of cargo moved through the Sault Ste. Marie Canals recorded a fall of 49.8 per cent, to 2,952,429 tons from 5,878,620 tons in April 1964. Downbound traffic shrank by 2,511,808 tons, to 2,554,872 tons from 5,066,680 tons, because of greatly reduced movements of wheat and iron ore. Upbound traffic also declined, to 397,557 tons from 811,940 tons. Bituminous coal accounted for 218,891 tons of this decline, and iron ore, 131,733 tons.
