CANAL STATISTICS, 1929

PREFACE AND SUMMARY

The traffic statistics of the Canadian canals are collected through the local agents of the Department of Railways and Canals and compiled by the Transportation Branch of the Dominion Bureau of Statistics. Each vessel using a canal must make a report to the officer in charge of the canal, giving the details of the vessel tonnage, draught, cargo, etc. There are no tolls charged for the use of the canals and at Sault Ste. Marie Canadian and United States vessels use the Canadian or United States locks as convenient. There are four locks at Sault Ste. Marie, one Canadian and one United States lock having approximately the same depth of water and two United States locks with six feet more water than the other two. On account of the greater draught allowed through two of the United States locks, the bulk of the traffic passes through those locks and the apparently large decline in traffic through all Canadian canals and through the Canadian canal at Sault Ste. Marie in 1914 and 1919 was due largely to this diversion when these United States locks were opened for traffic and only to a relatively small degree to decreases in canal traffic.

The traffic statistics are complete for each canal and vessels and cargoes using two or more canals in going from port of clearing to port of destination are included in the statistics for each canal used. A large percentage of the upbound traffic through the St. Lawrence canals uses the Welland and also the Sault Ste. Marie canal, mostly on the United States side, and a large percentage of the downbound traffic through the Welland canal passes down the St. Lawrence canals. Practically all the Ottawa canal traffic uses the Lachine locks of the St. Lawrence canal and is included in the St. Lawrence way traffic, and much of it also uses the locks of the Rideau system at Ottawa. The totals for all Canadian canals consequently contain a large amount of duplications.

Practically all the traffic using the Canadian canals is from and to Canadian or United States ports, but in recent years an increasing amount of freight has been brought up the canals and Great Lakes from European ports and a lesser amount has been shipped out direct to trans-Atlantic ports. For convenience such freight has been included with freight to and from United States ports. The inbound shipments from European, from Canadian and United States Atlantic ports during the season of navigation amounted to 29 cargoes of iron and steel, totalling 60,000 tons, 6 cargoes of 7,841 tons of English china clay, 20 cargoes of British coal, one cargo of 1,976 tons being for Fort William and the remainder of 39,334 tons being for Toronto, 10 cargoes of 12,090 tons of sugar, 3 cargoes of 5,500 tons of petroleum, 52 cargoes of 106,984 tons of pulp-wood from Nova Scotia, New Brunswick and lower Quebec ports, and 3 cargoes of Feldspar, manganese ore and pebbles. The outbound cargoes for Atlantic and European ports amounted to only 21 or 18,053 tons. These cargoes from and to outside ports still constitute a very small proportion of the total traffic using the canals.

At Sault Ste. Marie the heavy traffic is iron ore down bound and coal up bound. These two commodities constituted 87 per cent of the total traffic using the canals. The iron ore tonnage, amounting to 64,915,573 tons including 88,548 tons up bound, was a record for the canals; the previous record was 63,452,107 tons in 1916. The total traffic of 92,616,898 tons was also a new high record, exceeding the 1928 tonnage by 5,624,644 tons and exceeding the previous record made in 1916 by 728,679 tons. The traffic through the Canadian lock, amounting to 2,374-119 tons, was heavier than in any year since 1919 when the fourth United States lock was completed. The high lake level during the early months was probably a factor in causing a larger amount of shipping to use the Canadian lock.

On the Welland and St. Lawrence canals grain is the principal commodity. In 1928, when a record tonnage was handled, grain and grain products amounted to 5,294,426 tons, or 71 per cent of the total tonnage through the Welland canal and 5,124,348 tons, or 61 per cent of the

total tonnage using the St. Lawrence canals. The western grain crop for 1929 was light and consequently the canal traffic, especially on the Welland and St. Lawrence canals, showed large decreases. The estimated crops for the Prairie Provinces for 1929 were, wheat 276,664,000 bushels and all grain 512,023,000 bushels, as against 544,598,000 bushels of wheat and 971,635,400 bushels of all grains for 1928. Although there was a fairly heavy movement of old grain during April and May, it dropped off during June and July and the shipments from Fort William-Port Arthur from August 1, the beginning of the crop year, to the close of navigation amounted to only 81,236,788 bushels of wheat, or 29 per cent of the crop. This was less than the shipments for November alone the previous year, and for the five months wheat shipments in 1928 amounted to 225,001,783 bushels, or 41 per cent of the 1928 crop. Other grain showed a more or less similarly slow movement in 1929. The light crop and the slow movement combined caused a reduction in the Welland canal traffic of 2,261,405 tons of wheat and 2,858,563 tons of all grain and grain products. Bituminous coal showed an increase of 269,618 tons and petroleum and oils an increase of 51,333 tons, but the total traffic was lighter than in 1928 by 2,669,751 tons, or 36 per cent.

The St. Lawrence canal traffic was similarly affected, wheat traffic decreasing by 2,236,339 tons, barley by 254,719 tons, rye by 254,325 tons and the total tonnage by 2,692,891. Coal, iron ore and sand all showed substantial increases. Also petroleum and oils, sugar, iron and steel and beverages showed heavier shipments, but the loss in the grain traffic more than offset these increases. Through traffic which includes only freight using the entire length of the canals amounted to 4,592,312 tons, which was less than the 1928 tonnage by 2,729,036 tons. Way traffic, or traffic using only a portion of the St. Lawrence canal system, amounted to 1,126,339 tons, or 36,145 tons more than in 1928. This traffic consists largely of sand from the Ottawa river for Montreal using only the Lachine locks and pulpwood upbound for Cornwall and Waddington using the Lachine and Soulanges canals.

Traffic on the Chambly canal, which is on the route between the St. Lawrence and Hudson rivers, showed a decrease of 56,791 tons. This traffic consists largely of merchandise and forest products southbound and coal northbound, and while the merchandise showed little change from the 1928 tonnage, Canadian forest products for United States ports and United States coal for Canadian ports showed large decreases.

The traffic on the Ottawa canal consists largely of sand, principally for Montreal. This traffic also uses the Lachine locks of the St. Lawrence system. The sand tonnage, amounting to 431,736 tons, was heavier than in 1928 by 59,649 tons and the total traffic was heavier by 49,251 tons.

The Bureau collects from the ship companies or operators data on the freight rates charged for each cargo of Canadian grain and the weighted averages for each month, grain, and route are shown in tables 12-15. For much of the grain transferred at Port Colborne through rates to Montreal are quoted. Consequently the Montreal and Port Colborne rates are not weighted with the quantities of grain for these ports as shown in tables 6-10, but by the quantities transported on Montreal and Port Colborne rates. The rates which include storage are shown separately. These cover cargoes which are held in the vessels after the close of navigation for forwarding the following spring if held at loading point or for unloading at the convenience of the shipper during the winter if held at destination. These rates for transportation and storage are considerably higher than the transportation rates, as would be expected, but are generally lower than the combined transportation and elevator storage charges.

An analysis of the traffic for each canal is made in tables 29-38, which show the Canadian and United States vessels and the tonnage of Canadian and United States freight carried by the vessels of each registry. Tables 40-56 show statistics for 1900 to 1929 inclusive. The effect of the opening of the two large locks at Sault Ste. Marie in 1914 and 1919, mentioned above, should be considered when using tables 39 and 40.

R. H. COATS,

DOMINION BUREAU OF STATISTICS,
OTTAWA, March 1, 1930.

Dominion Statistician.

STATISTIQUES DES CANAUX, 1929

PRÉFACE ET RÉSUMÉ

Les statistiques du trafic des canaux canadiens sont colligées par les agents locaux du ministère des Chemins de Fer et Canaux et compilées par la Section des Transports du Bureau Fédéral de la Statistique. Chaque vaisseau passant par un canal doit faire un rapport à l'officier en charge du dit canal, donnant tous les détails sur son tonnage, son tirant d'eau, sa cargaison, etc. Aucun péage n'est exigé pour le passage des canaux, et au Sault Ste-Marie les vaisseaux canadiens ou américains se servent des canaux canadiens ou américains suivant leur convenance. Il y a au Sault Ste-Marie quatre écluses: une canadienne et une américaine qui ont approximativement la même profondeur, et deux autres américaines de six pieds plus profondes que les deux premières. Comme ces deux écluses américaines permettent le passage de navires de plus fort tirant, elles servent au gros du trafic. C'est ce qui explique le considérable affaissement apparent du trafic de tous les canaux canadiens et du canal canadien à Sault Ste-Marie en 1914 et 1919, quand ces deux écluses américaines ont été ouvertes au trafic, car la diminution réelle de trafic canadien par canaux est relativement minime.

Les statistiques du trafic sont complètes pour chaque canal, et les vaisseaux et cargaisons passant par deux ou plusieurs canaux entre leur point de départ et celui de destination sont compris dans les statistiques de chacun de ces canaux. Un fort pourcentage du trafic remontant les canaux du St-Laurent se sert du canal Welland et du canal du Sault Ste-Marie, la plupart du temps côté des Etats-Unis, et un fort pourcentage du trafic descendant les canaux passe aussi par le canal Welland et les canaux du St-Laurent. Presque tout le trafic des canaux de l'Ottawa passe par les écluses du canal de Lachine, sur le St-Laurent, et se trouve inclus dans le trafic des canaux du St-Laurent, et une autre partie passe par le canal Rideau, à Ottawa. Les totaux pour tous les canaux canadiens contiennent en conséquence une très forte proportion de répétitions.

Presque tout le trafic passant par les canaux canadiens est de provenance et à destination de ports canadiens ou américains, mais depuis quelques années il y a une augmentation notable de fret passant par les canaux allant jusqu'aux Grands Lacs et venant de ports européens tandis qu'il y a diminution dans le volume de marchandises expédiées directement à des ports transatlantiques. Pour simplifier, ce fret a été inclus avec celui provenant de ou en destination de ports des Etats-Unis. Le fret remontant les canaux au cours de la saison de navigation et venant ou de ports européens ou de ports canadiens ou américains de l'Atlantique, se compose de 29 cargaisons de fer et acier formant 60,000 tonnes; 6 cargaisons formant 7,841 tonnes de kaolin; 20 cargaisons de charbon anglais, une cargaison de 1,976 tonnes allant à Fort William et les autres 39,334 tonnes allant à Toronto; 10 cargaisons formant 12,900 tonnes de sucre; 3 cargaisons formant 5,500 tonnes de pétrole; 52 cargaisons formant 106,984 tonnes de bois de pulpe venant de la Nouvelle-Ecosse; et 3 cargaisons de feldspath, minerai de manganèse et de galets. Les cargaisons en destination directe des ports de l'Atlantique ou d'Europe, au nombre de 21, donnent 18,053 tonnes. Ce trafic direct avec les ports extérieurs forme une faible proportion du trafic total des canaux.

Le minerai de fer descendant et le charbon remontant constituent le gros du trafic du canal du Sault Ste-Marie. Ces deux articles contribuent 87 p.c. de tout le trafic passant par les canaux. Le minerai de fer, avec un volume de 64,915,573 tonnes, y compris 88,548 tonnes remontant, a dépassé tous les précédents, le maximum antérieur du trafic de cette matière par les canaux étant de 63,452,107 tonnes, en 1916. Le tonnage total a aussi brisé les records au chiffre de 92,616,898 tonnes, dépassant de 5,624,644 tonnes celui de 1928 et de 728,679 tonnes le record établi en 1916. Le trafic passant par l'écluse canadienne, 2,374,119 tonnes, a été le plus lourd depuis 1919, alors que fut ouverte la quatrième écluse américaine. Le niveau élevé de l'eau dans les premiers mois de la saison a probablement contribué à grossir le volume du trafic passant par l'écluse canadienne.

Le grain fournit le principal trafic du canal Welland et des canaux du St-Laurent. Le volume de grain et ses issues passé par ce réseau de canaux en 1928 dépasse tous les précédents, et au chiffre de 5,294,426 tonnes, contribue 71 p.c. du total passé par le canal Welland, et 5,124,348 tonnes, ou 61 p.c. du tonnage passé par les canaux du St-Laurent. La récolte de grain de l'ouest

a été médiocre en 1929 et en conséquence, il y a de fortes diminutions dans le trafic du canal Welland et des canaux du St-Laurent. La récolte de 1929 dans les provinces des Prairies est estimée à 276,664,000 boisseaux de blé et 512,023,000 boisseaux de tous grains, au lieu de 544,598,000 boisseaux de blé et 971,635,400 boisseaux de tous grains en 1928. Bien que le grain de la récolte de 1928 fût encore en mouvement en avril et mai 1929, il y a eu ralentissement en juin et juillet, et les expéditions de Port-William et Port-Arthur depuis le 1er août, date d'ouverture de l'année agricole, ne forment jusqu'à la clôture de la navigation que 81,236,788 boisseaux de blé, ou 29 p.c. de la récolte. C'est moins que les expéditions du seul mois de novembre de l'année précédente, et celles des cinq derniers mois de 1928 formaient 225,001,783 boisseaux, ou 41 p.c. de la récolte de 1928. Le mouvement des autres céréales a subi un ralentissement à peu près semblable. La faiblesse de la récolte combinée à la lenteur de l'écoulement a causé une réduction de 2,261,405 tonnes de blé et de 2,858,563 tonnes de tous grains et issues du grain passant par le canal Welland. Il y a une augmentation de 269,618 tonnes de charbon bitumineux, 51,333 tonnes de pétrole et autres huiles, mais le trafic global a diminué de 2,669,751 tonnes, ou 36 p.c.

Le trafic des canaux du St-Laurent a été affecté semblablement; le blé transporté a diminué de 2,236,339 tonnes; l'orge, de 254,719 tonnes; le scigle, de 254,325 tonnes; et le tonnage total, de 2,692,891 tonnes. Le charbon, le minerai de fer et le sable montrent des augmentations substantielles. Le pétrole et autres huiles, le sucre, le fer et acier et les breuvages ont été transportés en plus lourdes quantités mais la perte de trafic en grain a plus qu'effacé ces augmentations. Le trafic direct, celui passant par le réseau des canaux dans toute sa longueur, se totalise à 4,592,312 tonnes, soit 2,729,036 tonnes de moins qu'en 1928. Le trafic local, ou celui ne traversant qu'une portion du réseau du St-Laurent, se totalise à 1,126,339 tonnes, ou 36,145 tonnes de plus qu'en 1928. Ce trafic consiste en plus grande partie de sable pris dans la rivière Ottawa et dirigé sur Montréal par le canal de Lachine, et de bois de pulpe montant le St-Laurent jusqu'à Cornwall et Waddington, ne passant que le canal de Lachine et celui de Soulanges.

Le trafic du canal de Chambly, qui relie le St-Laurent à l'Hudson, accuse une diminution de 56,791 tonnes. Ce trafic se compose principalement de denrées et produits forestiers allant vers le sud et de charbon montant vers le nord, et s'il y a peu de variation avec 1928 dans le volume des denrées, les produits forestiers destinés aux ports américains et le charbon expédié aux ports canadiens montrent de grandes diminutions.

Le trafic sur le canal de la rivière Ottawa consiste principalement en sable, généralement destiné à Montréal. Ce trafic passe aussi par les écluses du canal de Lachine. Ce sable a contribué un trafic de 431,736 tonnes, soit 59,649 tonnes de plus qu'en 1928 et le trafic global donne une expansion de 49,251 tonnes.

Le Bureau reçoit des compagnies de navigation un état mensuel des taux de fret de chaque cargaison de grain canadien et des moyennes pondérées pour chaque mois, chaque céréale et chaque route paraissant dans les tableaux 12-15. Pour une grande partie du grain transbordé à Port Colborne, les taux sont ceux de l'expédition directe à Montréal. En conséquence, les taux entre Montréal et Port Colborne ne sont pas pondérés par les quantités de grain expédiées à ces ports, comme dans les tableaux 6-10, mais par les quantités transportées aux taux de Montréal et de Port Colborne. Les taux couvrant l'entreposage sont montrés séparément. Ces taux s'appliquent aux cargaisons gardées dans les cales après la clôture de la navigation pour être transportées le printemps suivant, si l'hivernement se fait au port de chargement, ou pour être déchargées à la demande de l'expéditeur si le bateau est rendu à destination. Ces taux couvrant le transport et l'entreposage sont considérablement plus élevés que ceux de transport comme on devrait s'y attendre, mais sont généralement plus bas que les frais combinés de transport et d'entreposage dans les élévateurs.

Les tableaux 29-38 présentent une analyse du trafic de chaque canal, montrant les vaisseaux de pavillon canadien ou américain, et les cargaisons canadiennes ou américaines transportées par les deux catégories de vaisseaux. Les tableaux 40-56 donnent les statistiques de 1900 à 1929 inclusivement. En étudiant les tableaux 39 et 40, il convient de toujours se rappeler de l'effet qu'a eu l'ouverture des deux grandes écluses américaines au Sault Ste-Marie en 1914 et 1919.

*Cargo vessels.

†Cargo vessels and vessels in ballast.

Number of pleasure crafts through locks in 1929—180.

Registered net tonnage of vessels. Tons (2,000 lbs.) of cargoes.

NOTE.—The above statement includes 684,908 tons of way freight distributed as follows: Corn 2,643, wheat 2,865, cement 125, iron—pig and bloom 850, iron and steel 54,665, petroleum 1,800, residue 8,477, pulpwood 224,246, hard coal 2,275, soft coal 109,902, coke 3,497, copper ore 75, iron ore 79,922, other ore 12,417, sand 181,148 tons.

St. Andrew's Canal opened for traffic in 1910. Origin of cargo not shown prior to 1908. Le canal St-André fut ouvert au trafic en 1910. Aucune statistique d'origine n'apparaît avant 1908. [†]Voir note Tableau 40.

^{**}Includes duplications where cargoes use two or more canals. ^{**}Comprend des duplications quand des cargaisons passent plus d'un canal. [†]Voir note Tableau 40.
