G. S. WRONG, B.Sc., Chief, Transportation and Public Utilities Branch

CANAL STATISTICS

PREFACE AND SUMMARY

The traffic statistics of the Canadian canals are collected through the local agents of the Department of Transport and compiled by the Transportation and Public Utilities Branch of the Dominion Bureau of Statistics. Each vessel using a canal must make a report to the officer in charge of the canal, giving the details of the vessel tonnage, draught, cargo, etc. There are no tolls charged for the use of the Canals and at Sault Ste. Marie Canadian and United States vessels use the Canadian or United States locks as convenient. There are four locks at Sault Ste. Marie, one Canadian and one United States lock having approximately the same depth of water and two United States locks with six feet more water than the other two. Because of the greater facilities on the United States side of the river a much larger portion of the traffic uses the United States locks than uses the Canadian lock.

The traffic statistics are complete for each canal and vessels and cargoes using two or more canals in going from port of clearance to port of destination are included in the statistics for each canal used. A large percentage of the upbound traffic through the St. Lawrence canals uses the Welland and also the Sault Ste. Marie canal, mostly on the United States side, and a large percentage of the downbound traffic has also used the Welland canal while a smaller percentage has passed through the locks at Sault Ste. Marie. Practically all the Ottawa canal traffic uses the Lachine locks of the St. Lawrence canal and is included in the St. Lawrence way traffic, and much of it also uses the locks of the Rideau system at Ottawa. The totals for all Canadian canals consequently contain a large amount of duplications.

The table below for the St. Lawrence Great Lakes system eliminates a certain quantity of duplication amounting to 7,032,528 tons, but this is not complete; large quantities of grain from Lake Superior ports are unloaded at Port Colborne and reshipped from there to Montreal or other St. Lawrence ports. In this table such shipments will be shown as using the Sault Ste. Marie canals only and also as using the St. Lawrence and Welland canals down-bound. The total tonnage shipped from ports between Sarnia and Port Colborne to points below Prescott amounted to 1,617,990 tons. This was composed largely of grain from Port Colborne and coal from United States Lake Erie ports. Consequently this net tonnage should be reduced about 700,000 tons for freight using two or more canals which has been unloaded and reloaded en route. The elimination of duplications for Canadian canals is not feasible because both Canadian and United States vessels use the locks on both sides of the river at Sault Ste. Marie without the payment of tolls or other restrictions.

**ST. LAWRENCE-GREAT LAKES TRAFFIC USING ST. LAWRENCE, WELLAND
AND SAULT STE. MARIE CANALS, 1936**

Sault Ste. Marie only.....	14,356,477	52,787,674	67,144,151
Total.....	19,385,717	61,835,682	81,221,399

* Contains approximately 700,000 tons of freight using the locks at Sault Ste. Marie and transhipped at Port Colborne.

The registered tonnage of vessels carrying cargoes is shown for each canal by nationality or port of clearance and port of destination, but the totals include tonnage of vessels in ballast and the number of vessels using the canals is also the total number. The freight includes all freight carried by vessels and rafts of timber, pulpwood and lumber floated through the locks. During the year 76 rafts of 25,485 tons used the Ottawa, Trent, Sault Ste. Marie and Rideau canals.

Practically all the traffic using the Canadian canals is from and to Canadian or United States ports, but in recent years a considerable amount of freight has been brought up the canals and Great Lakes from European ports and a lesser amount has been shipped out direct to trans-Atlantic ports. For convenience such freight has been included with freight to and from United States ports.

Navigation through the canals opened as follows: Sault Ste. Marie, April 28; Welland, April 17; St. Lawrence, April 17; St. Peter's, April 3, and on the other canals between April 24 and May 15. The season closed on the St. Lawrence on December 11, on the Welland on December 13 and on the Sault Ste. Marie canal on December 17.

The lake levels were slightly higher than during 1935 in all but Lake Superior which is more or less controlled at Sault Ste. Marie and here the difference was small. The November mean elevation in feet above mean sea level for Lake Huron was 578.31 as against the low of 577.53 reached in 1934; for Lake Erie it was 570.53 as against the low of 569.61 in 1934; for Lake Ontario, 243.63 as against 242.57 in 1934, and at Montreal, 19.75 as against 17.15 in 1934. These higher levels in the lakes and rivers meant better navigation conditions for the vessels and restrictions on the St. Lawrence canals were considerably less than in 1934 and 1935. The normal draught of 14 feet was allowed through the St. Lawrence canals from the opening of navigation till July 22 when it was reduced to 13 feet 9 inches. Further reductions of 3 inches on each date were made August 6, August 13 and August 28. On October 19 the allowable draught was increased from 13 feet to 13 feet 3 inches.

Sault Ste. Marie Canals.—Total freight using the Canadian and United States locks increased from 48,292,973 tons in 1935 to 69,529,132 tons, or by 21,236,159 tons or 44 per cent. Iron ore was heavier by 17,797,696 tons, or 61 per cent, and bituminous coal increased by 3,231,907 tons, or 36 per cent. Wheat shipments decreased from 5,386,082 tons to 4,896,366 tons, or by 489,716 tons or 16,323,866 bushels. Flour also decreased by 24,764 tons, or 4 per cent.

Welland Ship Canal.—Freight shipped through the canal and to and from ports on the canal during 1936 amounted to 10,436,803 tons, a new high record for the canal, and was over twice the tonnage a decade earlier. The traffic from 1900 to date shows a fairly steady increase from 719,360 tons in 1900 to 3,860,969 tons in 1914. For the next four years declines were recorded to a low of 2,170,779 tons in 1918. From then on till 1928 increases were made each year with one exception to 7,439,617 tons in 1928. For 1929 the total dropped to 4,769,866 tons but since, with the revival of industry and also due to the greater draught of the new canal, the tonnage has increased rapidly to the 1936 record. The large increases over 1935 were: wheat, 447,574 tons; gasolene, 76,832 tons; pulpwood, 95,170 tons; soft coal, 448,403 tons; iron ore 149,847 tons, and other ore, 85,540 tons. The table below is an analysis of the traffic

passing through the canal and does not include traffic to and from ports on the canal. This way traffic amounted to 954,173 tons including 611,028 tons up-bound and 343,145 tons down-bound. The details of this way traffic are shown in table 20 and through traffic is shown separately in table 21.

St. Lawrence Canals.—Total freight using the canals amounted to 8,288,524 tons, a gain of 1,414,869 tons over 1935, and this was greater than for any other year except 1928 when the total was 8,411,542 tons. Wheat alone accounted for 900,991 tons of the increase over 1935. Soft coal was heavier by 176,446 tons and coke by 99,081 tons, but hard coal decreased by 86,182 tons. Freight from Canadian Atlantic ports and from trans-Atlantic ports coming up the canals amounted to 283,397 tons, including 136,266 tons from Canadian ports and 147,131 tons from foreign ports. The Canadian freight was composed mostly of pulpwood, bituminous coal, coke, iron and steel and sugar. The foreign freight consisted of china clay, 22,047 tons; wood pulp, 50,741 tons; sugar, 2,016 tons; pulpwood, 200 tons; anthracite coal, 15,090 tons, exclusive of coal transhipped at Montreal; ore, other than iron and copper, 2,068 tons, and miscellaneous freight. Freight down the canal for points below or beyond Quebec amounted to 143,957 tons, the larger items being 29,592 tons of wheat, 32,818 tons of flour, 6,526 tons of iron and steel and 28,951 tons of miscellaneous freight for ports in the Maritime Provinces and 46,070 tons of miscellaneous cargoes for Newfoundland and trans-Atlantic ports.

The freight rates by water were slightly lower than in 1935. The weighted average computed by dividing the total freight charges by the total number of bushels carried during the season was 4.40 cents from the head of Lake Superior to Montreal, as against an average of 4.49 cents in 1935. To Georgian Bay ports the rates were about 10 per cent higher than in 1935 and they were also higher to Buffalo and Port Colborne.

STATISTIQUES DES CANAUX

PRÉFACE ET RÉSUMÉ

Les statistiques du trafic des canaux canadiens sont colligées par les agents locaux du ministère des Transports et compilées par la Branche des Transports et Utilités Publiques du Bureau Fédéral de la Statistique. Chaque vaisseau passant par un canal doit faire un rapport au fonctionnaire en charge de ce canal, donnant le tonnage, le tirant d'eau, la cargaison, etc., de ce bateau. Le passage par les canaux est gratuit et au Sault Ste-Marie les vaisseaux canadiens, et des Etats-Unis se servent suivant leur convenance des écluses canadiennes ou de celles des Etats-Unis. Il y a quatre écluses au Sault Ste-Marie, une du Canada et une des Etats-Unis ayant approximativement la même profondeur, et deux écluses des Etats-Unis qui sont de six pieds plus profondes que les deux premières. Attendu que la rive américaine offre de plus grands avantages, les bateaux utilisent en bien plus grand nombre les écluses des Etats-Unis que celles du Canada.

Les statistiques du trafic sont complètes pour chaque canal et les vaisseaux et cargaisons passant par deux ou plusieurs canaux depuis le port d'embarquement jusqu'au port de débarquement sont comprises dans les statistiques de chaque canal où ils ont passé. Un fort pourcentage du trafic remontant les canaux du Saint-Laurent passe par le canal Welland et le canal du Sault Ste-Marie, la plupart du côté des Etats-Unis, et un fort pourcentage du trafic descendant passe aussi par le canal Welland tandis qu'un plus faible pourcentage passe par les écluses du Sault Ste-Marie. Presque tout le trafic du canal de l'Ottawa passe par les écluses de Lachine, sur le canal du Saint-Laurent, et il est compris dans le trafic du Saint-Laurent, et une autre grande partie de ce trafic passe aussi par les écluses de la Rideau, à Ottawa. Par conséquent les totaux pour tous les canaux canadiens comprennent une forte proportion de doubles emplois.

Le tableau ci-dessous, sur le système Saint-Laurent et Grands Lacs, élimine une certaine partie du double emploi de 7,032,528 tonnes, mais ce n'est pas complet; de fortes quantités de céréales venues des ports du lac Supérieur sont déchargées à Port-Colborne, et de là prennent la direction du port de Montréal ou d'autres ports du Saint-Laurent. Dans le tableau ces expéditions sont indiquées comme utilisant seulement les canaux du Sault Ste-Marie, et aussi, dans la direction d'aval, les canaux du Saint-Laurent et le canal Welland. Le volume total en tonnes des expéditions des ports situés entre Sarnia et Port-Colborne à destination des ports en aval de Prescott s'établit à 1,617,990 tonnes. Les expéditions comprennent principalement du grain de Port-Colborne et de la houille des ports américains du lac Erié. Ce volume net en tonnes doit donc être réduit d'environ 700,000 tonnes, pour les marchandises utilisant deux canaux ou plus et déchargées ou chargées de nouveau en route. L'élimination des doubles emplois dans les canaux du Canada n'est guère possible, car les navires canadiens comme ceux des Etats-Unis se servent des écluses des deux rives de la rivière au Sault Ste-Marie sans acquitter de droits de passage ou d'autres redevances.

Total.....	19,385,717	61,835,682	81,221,399

* Y compris environ 700 000 tonnes de marchandises utilisant les écluses de Sault Ste-Marie et transbordées à Port-Coborne.

Le tonnage enregistré des navires marchands est inscrit pour chaque canal par nationalité du port d'embarquement et du port de débarquement, mais les totaux comprennent le tonnage des vaisseaux sur lest et le nombre de vaisseaux passant par les canaux est aussi le nombre total. Le fret comprend toutes marchandises transportées par navires et radeaux de bois, le bois de pulpe et le bois d'œuvre passant par les écluses. Au cours de l'année, 76 radeaux de 25,485 tonnes ont utilisé les canaux d'Ottawa, Trent, Sault Ste-Marie et Rideau.

Presque tout le trafic passant par les canaux canadiens est originaire de et en destination de ports canadiens ou américains, mais en ces dernières années une partie considérable du fret passant par les canaux et les Grands Lacs venait de ports européens et une partie moins importante a été expédiée directement à des ports transatlantiques. Pour la préparation des tableaux, ce fret a été inclus avec celui en provenance ou en destination de ports américains.

La navigation dans les canaux s'est ouverte ainsi qu'il suit: Sault Ste-Marie, le 28 avril; Welland, le 17 avril; Saint-Laurent, le 17 avril; Saint-Pierre, le 3 avril, et les autres canaux, entre le 24 avril et le 15 mai. Sur le Saint-Laurent, la saison de navigation s'est fermée le 11 décembre, sur le canal Welland le 13 décembre, et sur le canal Sault Ste-Marie le 17 décembre.

Le niveau des lacs a été un peu plus élevé qu'en 1935, excepté pour le lac Supérieur, dont les eaux sont plus ou moins gouvernées par les travaux de contrôle du Sault Ste-Marie, et le niveau a peu varié. En novembre, le niveau moyen, en pieds, au-dessus du niveau moyen de la mer, s'est établi à 578.31 pour le lac Huron, contre le bas niveau de 577.53 en 1934; à 570.53 pour le lac Erié, contre le bas niveau de 569.61 en 1934; à 243.63 pour le lac Ontario, contre 242.57 en 1934; et à 19.75 à Montréal, contre 17.15 en 1934. Ces niveaux plus élevés des eaux des lacs et des cours d'eau ont rendu la navigation plus facile d'accès aux vaisseaux, et les restrictions sur les canaux du Saint-Laurent étaient loin d'être aussi fortes qu'en 1934 et 1935. Le tirant d'eau normal, 14 pieds, a été permis dans les canaux du Saint-Laurent dès l'ouverture de la navigation jusqu'au 22 juillet, alors qu'il fut réduit à 13 pieds 9 pouces. Des réductions additionnelles de trois pouces chaque fois ont eu lieu aux dates suivantes: 6 août, 13 août et 28 août. Le 19 octobre, le tirant d'eau alloué passait de 13 pieds à 13 pieds et 3 pouces.

Canaux du Sault Ste-Marie.—Le trafic global des écluses canadiennes et des écluses américaines (69,529,132 tonnes) a augmenté de 44 p.c. (21,236,159 tonnes) sur celui de 1935 (48,292,973 tonnes). Le minerai de fer augmente de 17,797,696 tonnes ou 61 p.c., et le charbon bitumineux de 3,231,907 tonnes ou 36 p.c. Les expéditions de blé diminuent de 5,386,082 tonnes à 4,896,366 tonnes, différence de 489,716 tonnes (16,323,866 boisseaux). La farine diminue aussi de 24,764 tonnes ou 4 p.c.

Canal Welland.—Le trafic passant par le canal, et les expéditions aux ports ou des ports du canal, en 1936, s'établissent à 10,436,803 tonnes, ce qui constitue un nouveau sommet. C'est plus que le double du volume en tonnes d'il y a dix ans. De 1900 à nos jours accuse une augmentation passablement régulière. Il est passé de 719,360 tonnes en 1900 à 3,860,969 tonnes en 1914. Les quatre années suivantes il accuse des déclins pour s'établir à 2,170,779 tonnes en 1918. Depuis cette date jusqu'en 1928 toutes les années moins une accusent des augmentations, et le

trafic s'établit à 7,439,617 tonnes en 1928. En 1929 le total fléchit à 4,769,866 tonnes, mais à partir de là, tant à cause des progrès industriels que de la profondeur plus considérable du nouveau canal, le tonnage augmente toujours jusqu'au maximum établi en 1936. Les principales augmentations sur l'année 1935 sont les suivantes: 447,574 tonnes de blé, 76,832 gallons d'essence, 95,170 tonnes de bois de pulpe, 448,403 tonnes de charbon mou, 149,847 tonnes de minerai de fer, 85,540 tonnes d'autres minéraux. Le tableau ci-dessous présente une analyse du trafic utilisant le canal, sans comprendre le mouvement des marchandises vers les ports ou venant des ports du canal. Ce trafic local comprend 954,173 tonnes, dont 611,028 dans la direction d'amont et 343,145 dans celle d'aval. Le tableau 20 analyse le trafic local, et le tableau 21, le trafic direct.

Canaux du Saint-Laurent.—Le trafic total des canaux s'établit à 8,288,524 tonnes, augmentation de 1,414,869 tonnes sur 1935; c'est le plus fort trafic de toute année antérieure, sauf 1928, alors qu'il était de 8,411,542 tonnes. Le blé seul a augmenté de 900,991 tonnes sur 1935. Le charbon mou accuse une augmentation de 176,446 tonnes, et le coke, de 99,081 tonnes; par contre, le charbon dur a diminué de 86,182 tonnes. Le trafic des ports canadiens sur l'Atlantique et des ports transatlantiques passant par les canaux s'établit à 283,397 tonnes, dont 136,266 tonnes en provenance des ports du Canada et 147,131 tonnes en provenance des ports étrangers. Le trafic du Canada se compose presque exclusivement de bois de pulpe, de charbon bitumineux, de coke, de fer et acier, et de sucre. Le trafic étranger consiste de kaolinite (22,047 tonnes), pulpe de bois (50,741 tonnes), sucre (2,016 tonnes), bois de pulpe (200 tonnes), anthracite (15,090 tonnes) sans compter la houille transbordée à Montréal, minerai autre que celui du fer et du cuivre (2,068 tonnes), et divers produits. Le trafic dirigé en aval ou en bas de Québec représente 143,957 tonnes, et se compose surtout des produits suivants: blé (29,592 tonnes), farine (32,818 tonnes), fer et acier (6,526 tonnes), articles divers à destination des ports des Provinces Maritimes (28,951 tonnes), et cargaisons diverses dirigées sur Terre-Neuve et les ports transatlantiques (46,070 tonnes).

Les tarifs de transport par eau étaient un peu moins élevés qu'en 1935. La moyenne pondérée obtenue en divisant le total des frais de transport par le total de boisseaux transportés au cours de la saison s'établit à 4.40 cents à partir de la tête du lac Supérieur jusqu'à Montréal, contre une moyenne de 4.49 cents en 1935. Jusqu'aux ports de la Baie Georgienne les tarifs étaient d'environ 10 p.c. plus élevés qu'en 1935; ils l'étaient aussi sur le trafic dirigé sur Buffalo et Port-Colborne.

* Cargo vessels. † Cargo vessels and vessels in ballast.

Number of pleasure craft lockages in 1936, through lock—None.

Note.—In addition to the above, 853 fishing boats, carrying an aggregate cargo of 425 tons, passed through St. Peter's canal in 1936.

Registered net tonnage of vessels. Tons (2,000 lbs.) of cargo.

* Vaisseaux cargos. † Vaisseaux cargos et vaisseaux sur lest.

Nombre de canots ou yachts automobiles ayant passé en 1936 par l'écluse--Aucun.

Nota.—En outre, 853 bateaux de pêche transportant tous ensemble une cargaison de 425 tonnes, ont navigué le canal St-Pierre en 1936.

Tonnage net enregistré des navires. Tonnes (2,000 livres) des cargaisons.
