INTRODUCTION

This publication presents statistics on vessel movements through the eleven canal systems of Canada.

Source

The St. Lawrence Seaway Authority, the Department of Transport, and the Department of Public Works assist in the collection of data which appear in ninety-five tables contained in this publication. For each one-way or partial passage through the St. Lawrence Seaway canals, vessel operators are required to submit two copies of a "Transit Declaration Form" to the St. Lawrence Seaway Authority. One copy is forwarded to the Dominion Bureau of Statistics and the second retained for use of the Seaway Authority. For each one-way or partial passage through the Department of Transport canals and the Department of Public Works canal, a "Ship's Report - Canals" is completed, and one copy is submitted to the Dominion Bureau of Statistics.

The assistance of the proprietary crown corporation and the two federal government departments in collecting the reports which contain the basic data required for this publication has continued to be excellent, as has the cooperation of vessel operators in completing these reports.

Treatment of Data

Of the eleven canal systems included in this publication, three comprise the Canadian portion of the St. Lawrence Seaway. The Seaway is the deep waterway which extends from the Atlantic Ocean to Lake Superior. The Canadian portion of this deep waterway is made up of three sections—the St. Lawrence Canals Section (South Shore Canal, Beauharnois Canal, Iroquois Canal, Lachine Canal, and Cornwall Canal), the Welland Canal section, and the Sault Ste. Marie Canal section. These three canal systems are under the jurisdiction of the St. Lawrence Seaway Authority for operation and maintenance purposes.

Coverage of the canal at Sault Ste. Marie is mainly limited to the one Canadian lock, which constitutes the Sault Ste. Marie Canal section of Seaway. Because this lock is narrower, shallower, and shorter than the four United States locks, almost all of the commodities are transported through the United States locks. For comparison purposes the coverage includes a table based on traffic through both the United States locks and the Canadian lock.

Seven of the canal systems included in this publication are under the jurisdiction of the Department of Transport for operation and maintenance

purposes. They are St. Peter's Canal, the Canso Canal, the Richelieu River Canals, the Ottawa River Canals, the Rideau Canal, the Murray Canal, and the Trent Canal.

The Department of Public Works operates and maintains St. Andrew's Canal, which is one of the eleven canal systems included in this publication.

All commodities which were transported through the canal systems have been grouped according to the "Standard Commodity Classification Manual" published by the Dominion Bureau of Statistics. The original grouping of commodities is based on a list of 217 commodity classes. For the "Summary of Canal Statistics" monthly publication, this list was condensed into approximately seventy commodity classes. Because of space limitations, the commodity list has been further condensed for this annual publication into approximately sixty-five items for the commodity tables for the St. Lawrence and Welland Canals, and into approximately forty-five items for the summary table for all canals. Statistics relating to the original grouping of commodities can be obtained by forwarding a request to the Chief, Transportation Section, Dominion Bureau of Statistics, Ottawa. Appendix A contains the list of commodities into which all freight traffic is originally grouped.

The commodity information in this publication includes the division into "bulk" or "general" of the commodities transported through the sections of the St. Lawrence Seaway on which tolls may be charged (the St. Lawrence Canals section and the Welland Canal section). During 1965 the St. Lawrence Canals (with the exception of the Cornwall Canal) was the only section of the Seaway on which tolls were assessed. Vessels which used the Lachine Canal as part of their use of the canal facilities of the Seaway were required to pay tolls, but vessels which used only the Lachine Canal were not charged tolls. Although the Welland Canal was toll-free during the year, the cargo which was carried through it has been classified as "bulk" or "general", to enable comparison with the commodities transported through the St. Lawrence Canals.

"Bulk" commodities are those which are assessed for St. Lawrence Seaway tolls at the bulk cargo rate. This type of cargo consists of goods that are loose or in a mass, and which generally must be shovelled, pumped, blown, scooped, or forked in their handling. All grains, cement, coke, petroleum, liquids carried in tanks, ores and minerals, pig iron, scrap iron and scrap steel, pulpwood, poles and logs, raw sugar, wood pulp, and "domestic package freight" are assessed at the bulk cargo rate. "General" commodities are those which are not defined as bulk commodities.

"Domestic package freight" consists of packaged unidentifiable commodities, which are transported from an origin in Canada to a destination in Canada.

A vessel is classed as being "in ballast" if it is carrying no cargo when it travels through a canal system.

It should be noted that the statistics in this publication include duplications where vessels pass through two or more canals.

The direction "downbound" for:

St. Peter's Canal, is from the Bras d'Or Lakes to St. Peter's Bay;

Canso Canal, is from George Bay to Port Hastings;

Richelieu River Canals, is from St. Jean to St. Ours;

Ottawa River Canals, is from Grenville to Ste. Anne;

Rideau Canal, is from Kingston to Ottawa;

Murray Canal, is from Lake Ontario to Bay of Quinte (if a vessel has proceeded from the Trent Canal, however, downbound is from Bay of Quinte to Lake Ontario);

Trent Canal, is from Lake Huron to Lake Ontario;

St. Lawrence Seaway, is from Lake Superior to Montreal;

St. Andrew's Canal, is from Winnipeg to Lake Winnipeg.

Contrary to what was stated in the text for the April 1964 "Summary of Canal Statistics" publication, the number of pleasure craft lockages for each canal does not appear in the summary table. This information has been eliminated because analyses of canal system usage by pleasure craft, based on previously-published data, were unreliable due to two facts. Firstly, many pleasure craft used only part of a canal system; secondly, the data for pleasure craft lockages included many duplications, as each pleasure craft was counted each time it passed through a lock station.

Except for the St. Lawrence Canals, the Welland Canal, the Sault Ste. Marie Canal, and St. Andrew's Canal, passenger statistics in the summary table have been eliminated. This has been done because the information on passenger movements through the other seven canals have been considered to be incomplete.

Analysis of Data

Activity in the eleven Canadian canal systems reached record levels in 1964. Factors contributing to the establishment of these records were the new heights reached by import and export trade, and the expansion in coastwise shipping (preliminary shipping data indicate a new record of approximately 51,000,000 tons of cargo unloadings in coastwise shipping).

The total tonnage of cargo transported through all Canadian canals during 1964 increased 25.1 per cent, to a record of 93,276,850 tons. Tonnages moved through the St. Lawrence Canals and the Welland Canal also reached new heights. The volume of commodities transported through the St. Lawrence Canals rose 26.6 per cent over the previous year's total, to 39,440,173 tons. Cargo transported through the Welland Canal rose 24.4 per cent, to 51,416,382 tons.

In 1955 a total of 34,874,198 tons of cargo was transported through Canadian canals. In 1958, the year prior to the opening of the St. Lawrence Seaway, this figure had risen to 35,096,587 tons. At the end of the sixth year of operation of the Seaway, the tonnage transported had risen to 93,276,850 tons. This trend illustrates the significant increase in the use of Canadian canal systems, which, over the ten-year period, handled an increase of 167.5 per cent in commodity movements.

Vessel Passages

The 21,811 vessel passages which were recorded in 1963 increased to 23,155 in 1964. The trend towards the use of fewer, but larger, vessels which began in 1960, therefore, has ceased this year. The registered net tonnage of these vessels, however, continued to expand; 68,157,996 net tons were reported this year, compared to 59,236,863 net tons in 1963.

Over the years the trend of vessel passages through the two major canal systems has been for the number of passages through the St. Lawrence Canals to exceed that of the Welland Canal. This trend was interrupted in 1963, however, when, for the first time, more vessels moved through the Welland Canal than the St. Lawrence Canals. This year the trend has been resumed.

Commodities

In 1964 the commodities transported in greatest volume through Canadian canals were iron ore, wheat, bituminous coal, and corn. Illustrating the fact that bulk commodities comprise the major portion of movements through the canal systems, transportation of these four commodities accounted for 66.6 per cent of the total volume of cargo.

Canada is now the world's leading exporter of iron ore. Transportation of this commodity through Canadian canals in 1964 expanded by 38.9 per cent,

to 28,910,524 tons. By contrast, the tonnage moved a decade ago was only 2,596,249 tons. Indications are that the movements of iron ore through the canal systems will expand each year, but, perhaps, at a lesser rate than was experienced this year.

Wheat movements, which were second in volume in 1964, increased 26.1 per cent, to a total of 19,172,466 tons. The impetus to this increase was provided by the major shipments to the U.S.S.R. and other Communist countries which began in 1963. These shipments continued at an accelerated rate in 1964.

The third largest commodity was bituminous coal, which rose 19.7 per cent, as a result of increased industrial demand in the Lake Ontario region.

Corn was fourth in the group of largest commodities. Reported movements of this commodity increased 22.3 per cent, to a total of 6,858,801 tons. Shipments from the United States amounted to 99.4 per cent of this total.

As well as recording significant changes in the transportation of the four major commodities, canal statistics for 1964 reveal important changes in several other commodities:

Soya bean shipments rose 43.6 per cent, to a total of 2,456,262 tons. Almost all of the total tonnage of this commodity came from the U.S. Great Lakes region, and was destined for Canada and "Other European" countries.

The amount of flaxseed transported through canals rose 47.3 per cent, to a total of 812,267 tons. The bulk of this commodity moves from Port Arthur-Fort William to lower St. Lawrence River ports for transshipment overseas.

Pig iron movements upbound through the St. Lawrence Canals and the Welland Canal almost doubled, to 510,966 tons, as a result of increased loadings of this commodity at Sorel.

The majority of rye shipments downbound through the two main canal systems of the St. Lawrence Seaway came from U.S. ports, and were destined to Canadian or overseas ports. Compared to 1963 these shipments dropped by more than half, to a total of 305,546 tons.

Vessel Registries

The percentage of total tonnages transported through Canadian canals by vessels of Canadian registry decreased in 1964. A total of 58,138,463 tons, or 62.4 per cent of total tonnages, was carried by these vessels, compared to 65.5 per cent a year earlier.

Vessels registered in the United Kingdom and the United States carried more cargo in 1964 than 1963. United Kingdom vessels transported 12,111,198 tons, or 13.0 per cent of the total cargo transported through Canadian canals. A year ago these vessels moved 8,671,523 tons, or 11.6 per cent of the total. Vessels registered in the United States handled 7,939,695 tons, or 8.5 per cent, compared to 5,094,124 tons, or 6.8 per cent.

The remaining portion of the total cargo transported — 15,087,494 tons, or 16.1 per cent — was shared by vessels of other foreign countries. The percentage of total tonnage carried in these vessels was unchanged, but the amount of cargo carried by these vessels increased by 3,127,617 tons, compared to 1963.
