SHIPPING REPORT

1 9 4 9

REVIEW OF 1949 RESULTS

The addition of the sea-girt province of Newfoundland to the Canadian shipping world on April 1, 1949, considerably expanded our statistics of maritime activity. Some thirty customs ports were added and returns received from them on the arrival of 5,968 vessels in coastwise trade and 1,286 vessels in foreign service, including many engaged in harvesting the bountiful deep sea fishing grounds that abound off the Newfoundland shores. Cargoes loaded for foreign countries at Newfoundland ports totalled 1,504,738 tons during the nine months of 1949, while foreign tonnage unloaded amounted to 312,505 tons. Commerce between the other nine provinces and Newfoundland which previously was shown under foreign trade is no longer subject to statistical measurement in shipping statistics as it is now coastwise or inter-provincial. Consequently, comparisons with preceding years are somewhat affected by the entry of Newfoundland. During 1948 Canada had delivered 799,423 tons of cargo to Newfoundland and received 1,315,167 tons, of which iron ore and limestone supplied the bulk.

During the year 1949 a total of 112,577 vessel arrivals were recorded by customs compared with 106,279 in 1948 and is the largest number since 1940. Registered net tonnage of vessels arriving, however, at 96,125,380 net tons was the heaviest on record. Some 27 p.c. of arrivals were in foreign service and they represented 41.7 p.c. of the total registered net tonnage of all arrivals.

As shown in Table 5, vessels brought a total of 28,319,354 tons of cargo to Canadian ports from foreign points during the year compared with 36,844,187 tons in 1948, while 22,441,732 tons of cargo were loaded at Canadian ports for foreign delivery in 1949 as against 20,440,955 tons in the preceding year, indicating a considerable drop in import tonnage and a gain of 9.8 p.c. in exported tonnage, principally in wheat, rye, flour, mill products, apples, potatoes, iron ore, aluminium and newsprint. The decline in imports was largely in bituminous coal, which dropped from 18.5 million to 11.5 million tons due to strikes in the U. S. fields, and in iron ore, crude petroleum, petroleum oils and limestone, (formerly "foreign" from Newfoundland).

The 1949 pattern of Canadian waterborne trade indicated that a large percentage of our exports moved to the United States while that for overseas, restricted by currency barriers, is

confined more and more to essential foodstuffs and materials and newsprint. Cargoes loaded for the United States during 1949 weighed 9,780,858 tons compared with 8,611,787 tons in 1948, while cargoes received dropped from 28,773,174 to 20,993,268 tons, principally due to lighter soft coal receipts. Trade with the United Kingdom, reflecting heavier grain shipments, increased from 6,551,683 to 7,371,788 tons in exports, and with imports up from 679,712 to 995,525 tons.

Table 8 reveals an increase over 1948 in loadings in each of the three geographical regions - Atlantic, Great Lakes and Pacific - while Table 9 indicates unloadings were reduced in all regions with the Great Lakes showing the heaviest decrease.

Canada's overseas trade, as illustrated in Tables 8 and 9 by country of destination and of origin, is carried in vessels of many different countries of registry but with ships of the United Kingdom, United States, Norway, Greece, Panama and Sweden carrying the bulk of our export and import trade. Less than one fifth of cargo to and from overseas points is carried under the Canadian flag. World dollar shortages and competition from an increasing fleet of more efficient and faster foreign vessels have accentuated the problems facing Canadian operators. The cost of operating a Canadian flagship is the second highest in the world. Soft currency countries naturally strive to save dollars by furnishing their own vessels to carry imports and earn dollars to pay for same by carrying exports. Arrivals and departures of Canadian tugs in coasting and foreign service during 1949 are shown in Table 10 with British Columbia vessels by far the most active, particularly in the lumber trade off Vancouver Island and about the port of Vancouver.

The total number of new vessels arriving during the year in coastwise service was 62 of 10,241 registered net tons, while 52 new arrivals of 25,847 net tons were recorded in foreign service.

Some inconsistencies are apparent in comparison with Trade of Canada data since many vessels do not report cargo in detail but simply as "general" or "mixed". This is particularly true of passenger-freight service where a great variety of foreign manufactured products may be unloaded. Consequently, such tonnages as those for autos, trucks and parts, chinaware, iron and steel, beverages, etc., unloaded at Atlantic and Lower St. Lawrence ports are incomplete. The total of "general" cargo unloaded at all ports during the year grossed 1,263,245 tons, of which 1,076,008 was shown for eastern ports.

SOURCE AND TREATMENT OF DATA

Shipping statistics are compiled from reports made by operators or agents of vessels arriving at and departing from Canadian ports for which there are customs officials. These officials act as agents for the Dominion Bureau of Statistics in collecting the reports and forwarding them to the Bureau. A description of the method of collecting and compiling the statistics is given in the report for 1941. Also included in that report are reproductions of the statistical form used for vessels in both coasting and in foreign service and reproductions of the cards used to analyse and compile statistics of vessels in foreign service and their cargoes, loaded and unloaded.

Coasting service includes vessels arriving from a Canadian port or departing for a Canadian port when no freight from a foreign port is unloaded or no freight for a foreign port is loaded. Under this definition a foreign vessel from a foreign country would be classed in coasting service when departing from a Canadian port for a second Canadian port, as well as vessels trading between Canadian ports. Foreign service includes vessels arriving from a foreign port as last port of call or departing for a foreign port as first port of call, or unloading freight from or loading freight for a foreign port. Vessels in foreign service include vessels classified in reports prior to 1941 as "sea-going" and "trading between Canada and the United States on lakes and rivers".

If a vessel does not unload any freight or does not load any freight, it is classed as arriving or departing, respectively, "in ballast", regardless of the amount of freight it might have on board. Because of these definitions a vessel may arrive twice in foreign service and depart in coasting service on the same trip and, consequently, the number of departures and arrivals in either class of service will not always be the same. Vessels built in Canadian ports will also cause a disparity in the number of arrivals and departures. There are also certain customs regulations in respect to fishing vessels that are responsible for some difference in reports of departures and arrivals.

In the 1948 and 1949 reports Tables 8 and 9 have been considerably expanded. Table 8 gives the country of destination, kind of cargo, registry of vessel, tonnage or tons measurement of cargo loaded for foreign countries and allocates by geographical regions of Canada. Table 9 shows country of origin of cargoes unloaded in foreign trade as well as kind or commodity, registry of vessel, tonnage or tons measurement of cargo and by geographical divisions, namely, Atlantic and Lower St. Lawrence, Great Lakes and Upper St. Lawrence and at Pacific ports.

Table 11 lists arrivals and departures of fishing vessels from customs ports only. Table 5 shows cargo tonnage of vessels by country of registry. Other statistics available on request but not

published in this report, include draft of vessels entering each port, vessels of each flag entering each port, etc.

In classifying vessels in coasting service as to size, all unrigged vessels, all tugs and sail fishing vessels were grouped with the vessels of 10 to 99 net registered tons. Also, all vessels of over 4,000 net tons in coastal service were grouped with vessels 4,000 to 4,999 tons. This accounts for the average tonnage of coasting vessels in these two groups being greater in some cases than the maximum of the group. The number of vessels in coasting service of over 4,999 net tons are few except on the Great Lakes and the unrigged, tugs and sail fishing vessels were grouped with these small vessels for convenience. All vessels in foreign service were classified in Tables 2 and 3 strictly according to their tonnages.

Cargoes:- Tables 6 to 9 include data on cargoes to and from foreign countries. Details of cargoes are shown only for the larger ports and when only one commodity was handled at these ports the commodity was shown and no total. Tonnages of each commodity listed are not complete in all cases. Considerable tonnage of these commodities is included under "General", but where vessels loaded or unloaded only one commodity or where vessels with general cargoes handled any of these commodities in large lots, the tonnage of the commodity was reported and compiled. Tonnage data were required to be reported in tons weight of 2,000 pounds or in tons measurement of 40 cu.ft., but because of the practice in previous years of reporting tons in long tons of 2,240 pounds there is a possibility that some vessels did not report their cargoes in short tons.

Vessel Tonnage:- Reports are not required from cargo vessels of less than ten net tons. Tugs and other vessels not designed to carry cargoes are required to report gross tons instead of net tons and these gross tons are added to net registered tons of other vessels in this report. These gross tons are a small percentage of the total and consequently the effect is small. No reports are required from such vessels of less than ten gross tons.

A list of the countries and geographical areas used for origin and destinations of vessels and of cargoes is included as an appendix. Also, as a second appendix is a list of the commodities used for classifying cargoes. By reference to these the meaning of such items as "ores - other", "West Indies - other", etc., is clarified.

- (1) Includes the following vessels in Coasting Service
 (a) Vessels of 10 - 99 Registered Net Tons.
 (b) All unrigged vessels.
 (c) All tugs.
 (d) All sail fishing vessels.

Includes Newfoundland data from April 1, 1949.

- (2) Includes all vessels of 4,000 Registered Net Tons or over in Coasting Service.

SHIPPING, 1949
