INTRODUCTION

This is the first section of the 1953 "Shipping Report" which presents the details of cargoes loaded and unloaded at Canadian customs ports in international seaborne or foreign shipping. It contains four tables, the first two of which show cargoes loaded by country of destination and by commodities, while tables three and four show similar data for cargoes unloaded from foreign countries. Section II which will be released shortly, will contain a number of other tables pertaining to foreign shipping while Section III will cover all available data relating to the coastwise trade including details of cargoes for the second time.

Previous to 1952, a complete statistical picture of Canada's shipping activity was not available due to insufficient detail of the coastwise and inland segments of the industry. The Bureau's annual "Canal Statistics" gives an analysis of traffic moving between Canadian ports but only that portion which was required to use the facilities of one or more of the canal systems. Also, some records of coastwise traffic were maintained by the National Harbours Board and certain Harbour Commissioners and Boards of Trade. In addition, special surveys were made for the Canadian Maritime Commission

each year on cargoes carried into the St. Lawrence River — Great Lakes system by the principal Canadian shipping companies.

The great bulk of the cargo moving, however, between pairs of Canadian ports on the Atlantic and Pacific coasts and on certain Great Lakes and the St. Lawrence River were not reported. As a result, early in 1951 an inter-departmental committee, representing all interested parties, was set up to look into the problem.

It was forthwith, decided to make an attempt to secure the details of cargoes carried in the coastwise trade as it would provide another statistic towards the measurement of interprovincial trade in Canada and as it would be important to know the pattern of the coasting trade in case of an emergency.

Due to the excellent co-operation received from the customs officials of the Department of National Revenue in Ottawa and, particularly, at the ports in the instruction of shipping officers in the new procedure of reporting the coastwise trade, these new data were collected beginning in January, 1952.

SOURCE AND TREATMENT OF DATA

Shipping statistics are compiled from reports made by operators or agents of vessels arriving at and departing from Canadian ports at which there are customs officials. These officials act as agents for the Dominion Bureau of Statistics in collecting the reports and forwarding them to the Bureau.

A vessel is classed as being in foreign service when (1) it arrives from a foreign port as last port of call or departs for a foreign port as first port of call; (2) cargo is loaded for a foreign port or unloaded from a foreign port and (3) the registry of the vessel is other than Canada or the United Kingdom even though the vessel may have arrived at one Canadian port from another or departed from a Canadian port for another.

Coasting service includes vessels of Canadian or United Kingdom registry only, which arrive at a Canadian port from another or depart from a Canadian port for another Canadian one and when no freight from a foreign port is unloaded or no freight for a foreign is loaded.

If a vessel does not unload any freight or does not load any freight, it is classed as arriving or departing, respectively, "in ballast", regardless of the amount of freight it might have on board. Because of these definitions a vessel may arrive twice in foreign service and depart in coasting service on the same trip and, consequently, the number of departures and arrivals in either class of service

will not always be the same. Vessels built in Canadian ports will also cause a disparity in the number of arrivals and departures. There are also certain customs regulations in respect to fishing vessels that are responsible for some difference in reports of departures and arrivals.

Beginning with the 1948 report Tables 1 and 3 were considerably expanded. Table 1 gives the country of destination, kind of cargo, registry of vessel, tonnage of cargo loaded for foreign countries and allocates by geographical regions of Canada. Table 3 shows country of origin of cargoes unloaded in foreign trade as well as kind or commodity, registry of vessel, tonnage of cargo and by geographical divisions, namely, Atlantic and Lower St. Lawrence, Great Lakes and Upper St. Lawrence and at Pacific ports.

In classifying vessels in coasting service as to size, all unrigged vessels, all tugs and sail fishing vessels were grouped with the vessels of 10 to 99 net registered tons. Also, all vessels of over 4,000 net tons in coastal service were grouped with vessels 4,000 to 4,999 tons. This accounts for the average tonnage of coasting vessels in these two groups being greater in some cases than the maximum of the group. The number of vessels in coasting service of over 4,999 net tons are few except on the Great Lakes and the unrigged, tugs and sail fishing vessels were grouped with these small vessels for convenience.

Cargoes:—Tables 1 and 4 include data on cargoes to and from foreign countries. Tonnages of each commodity listed are not complete in all cases. Considerable tonnage of these commodities is included under "General", but where vessels loaded or unloaded only one commodity or where vessels with general cargoes handled any of these commodities in large lots, the tonnage of the commodity was reported and compiled. Tonnage data are required to be reported in tons weight of 2,000 pounds or in tons measurement of 40 cu. ft., but because of the practice in previous years of reporting tons in long tons of 2,240 pounds there is a possibility that some vessels did not report their cargoes in short tons. As of 1951, cargoes reported in tons measurement have been added to those reported in tons weight.

Reports are not required from vessels of less than ten net tons. Tugs and other vessels not designed to carry cargoes are required to report gross tons instead of net tons and these gross tons are added to net registered tons of other vessels in this report. These gross tons are a small percentage of the total and consequently the effect is insignificant.

A list of the countries and geographical areas used for origin and destination of vessels and cargoes is included as an appendix to Section III. Also, as a second appendix, there is a list of the commodities used for classifying cargoes. By reference to these the meaning of such items as "Ores—other, West Indies—other, etc." is clarified.

REVIEW OF 1953 OPERATIONS

The total tonnage of cargoes loaded at Canadian customs ports for foreign countries during 1953 amounted to 32,202,205 short tons, a decrease of 362,710 tons or 1.1 per cent from the record of 32,564,915 tons which was established in 1952. Loadings at Great Lakes and Pacific ports show an increase over the previous year while total loadings at Atlantic and Lower St. Lawrence River ports dropped to 17,010,295 tons from 17,933,184, a decrease of 922,889 tons or 5.1 per cent. Increased tonnages were reported for a number of commodities including iron ore, scrap iron, gypsum, newsprint, pig iron, other metallic ores, rye, corn, paper-other, firewood and sand. Iron ore shipments rose to 4,907,331 tons from 3,946,098; iron and steel scrap advanced to 322,316 tons from 56,304, lumber was up to 2,110,304 tons from 1,886,989 and cargoes of newsprint paper amounted to 1,997,009 tons as compared with 1,810,461 tons in the previous year. These increases were, however, more than offset by declines in loadings of such commodities as wheat, logs, pulpwood, flour, gasoline, bituminous coal, lead and zinc ore, flaxseed, fertilizers and general. The tonnage of wheat loaded for foreign countries during 1953 amounted to 7,588,616 tons a drop of 1,488,996 tons or 16.4 percent from the 1952 total of 9,077,612 tons; shipments of logs, posts, poles, etc. declined to 435,234 tons from 989,908; pulpwood dropped to 1,553,414 tons from 1,871,668; and flour was down to 390,999 tons from 617,007. Increased tonnages were loaded for the United States, South Africa, Japan, Netherlands and Korea but were lighter for Belgium, Brazil, Eire, France, Germany, India and Italy.

The total weight of cargoes unloaded from foreign countries was also below the record year, 1952. The total amounted to 38,691,877 tons down slightly from the 38,756,206 tons reported in the previous year. Whereas loadings were up in the Pacific and Great Lakes areas and down in the Atlantic region, the reverse is true for unloadings as the total for the Atlantic area rose while slight decreases were recorded for the Pacific and Great Lakes divisions. Lighter shipments were reported for wheat which weighed 15,956 tons as against 402,956 tons a year earlier; petroleum oils declined to 3,613,160 tons from 3,929,039; cement dropped to 109,293 tons from 215,718; limestone, iron, crude oil and other mine products. Increases were recorded for Alberta crude oil, which was transported from Superior, Wisconsin to the refinery at Sarnia, bauxite, fertilizer, corn, sand, chemicals and general.

As in previous years, the bulk of Canada's waterborne commerce was with the United States and the United Kingdom which, together, accounted for 66.6 per cent of total cargoes loaded and 80.6 per cent of total unloadings. Cargoes loaded for United States ports during 1953 totalled 13,278,376 tons an advance of 861,719 tons or 6.9 per cent over the 1952 total of 12,416,657 tons while unloadings declined from 30,085,202 tons to 29,715,411. Shipments to the United Kingdom also show an advance over the preceding year rising to 8,167,085 tons from 7,863,175 while imports rose to 1,478,969 tons from 1,249,752.
