INTRODUCTION

Part I of the 1960 Shipping Report contains five tables which provide details of cargoes loaded and unloaded at Canadian ports in international seaborne or foreign shipping. The first two show cargoes loaded by country of destination and by commodities, while tables three and four show similar data for cargoes unloaded from foreign countries. Table 5 shows the number and registered net tonnage of vessels arriving at and departing from Canadian ports in international service, by registry of vessel. This table also shows the cargo tons loaded and unloaded. Part II which will be released shortly, will contain other tables pertaining to foreign shipping including statistics for the individual ports, covering vessel arrivals and departures and cargoes loaded and unloaded. Part III will include all available data relating to coastwise shipping, including details of cargo.

Previous to 1952, a complete statistical picture of Canada's shipping activity was not available due to insufficient detail of the coastwise and inland segments of the industry. The Bureau's annual "Canal Statistics" gives an analysis of traffic moving between Canadian ports but only that portion which uses the facilities of one or more of the canal systems. Also, some records of coastwise traffic were maintained by the National Harbours Board and certain Harbour Commissioners and Boards of

Trade. In addition, special surveys were made for the Canadian Maritime Commission each year on cargoes carried into the St. Lawrence River - Great Lakes system by the principal Canadian shipping companies.

The great bulk of the cargo moving, however, between Canadian ports on the Atlantic and Pacific coasts and on the Great Lakes and the St. Lawrence River was not reported. As a result, early in 1951 an inter-departmental committee, representing all interested parties, decided to attempt to secure the details of cargoes carried in the coastwise trade as it would provide another statistic towards the measurement of interprovincial trade in Canada and as it would be important to know the pattern of the coasting trade in case of an emergency.

With the excellent assistance of the Department of National Revenue whose customs officials instructed shipping officers in the new procedure of reporting their coastwise activities, these new data were collected beginning in January, 1952.

Commencing January, 1957, statistics on vessels in coastwise traffic were expanded to include the movement to and from non-customs ports.

Source and Treatment of Data

Shipping statistics are compiled from reports made by operators or agents of vessels arriving at and departing from Canadian ports. At ports where there are customs officials these officials act as agents for the Dominion Bureau of Statistics in collecting the reports and forwarding them to the Bureau. For other ports the reports are either forwarded through the nearest customs office or mailed direct to the Bureau.

Customs regulations regarding coastwise vessels were revised in April, 1955 to permit owners or masters of such vessels who obtain coasting licenses to enter and leave port without clearing at customs. Thus no longer is the owner or master required to present a shipping report

directly to customs officials but instead may mail his report to the customs officials at the port concerned if it is more convenient. This new procedure has given the Bureau the task of ensuring that all licensed coasting vessels continually report all their shipping activities. Failure to submit shipping reports can result in the cancellation of a vessel's coasting license by the Department of National Revenue.

A vessel is classed as being in foreign service when (1) it arrives from a foreign port as last port of call or departs for a foreign port as first port of call; (2) cargo is loaded for a foreign port or unloaded from a foreign port; (3) the registry of the vessel is other than Canada or the British Common-

wealth even though the vessel may have arrived at one Canadian port from another or departed from a Canadian port for another.

Coasting service includes vessels of Canadian or British registry only, which arrive at one Canadian port from another or depart from one Canadian port for another and when no freight from a foreign port is unloaded or no freight for a foreign port is loaded.

If a vessel does not unload any freight or does not load any freight, it is classed as arriving or departing, respectively, "in ballast", regardless of the amount of freight it might have on board. Because of these definitions a vessel may arrive twice in foreign service and depart in coasting service on the same trip, and, consequently, the number of departures and arrivals in either class of service will not always be the same. Vessels built in Canadian ports will also cause a disparity in the number of arrivals and departures. There are also certain customs regulations in respect to fishing vessels that are responsible for some difference in reports of departures and arrivals.

Table 1 gives the country of destination, kind of cargo, registry of vessel, tonnage of cargo loaded for foreign countries and allocated by geographical regions of Canada, namely, Atlantic and Lower St. Lawrence, Great Lakes and Upper St. Lawrence and at Pacific ports. Table 3 shows country of

origin of cargoes unloaded in foreign trade as well as kind of commodity, registry of vessel, tonnage of cargo and by geographical divisions.

Tables 2 and 4 include data on cargoes to and from foreign countries. Tonnages of each commodity listed are not complete in all cases. Considerable tonnage of these commodities is included under "General", but where vessels loaded or unloaded only one commodity or where vessels with general cargoes handled any of these commodities in large lots, the tonnage of the commodity was reported and compiled.

Tonnage data are required to be reported in tons weight of 2,000 pounds or in tons measurement of 40 cu. ft., but because of the practice in previous years of reporting tons in long tons of 2,240 pounds there is a possibility that some vessels did not report their cargoes in short tons. As of 1951, cargoes reported in tons measurement have been added to those reported in tons weight. Reports are not required from vessels of less than 15 registered net tons.

A list of the countries and geographical areas used for origin and destination of vessels and cargoes is included as an appendix to Part 1. Also, as a second appendix, there is a list of the commodities used for classifying cargoes. By reference to these the meaning of abbreviations is clarified.

REVIEW OF 1960 OPERATIONS

Vessels departing from Canadian ports for foreign countries reported loadings of 50,554,086 tons, an increase of 98,983 tons over the previous year total of 50,455,033 tons. Loadings at Atlantic and lower St. Lawrence River ports declined 4.8 per cent to 29,733,323 tons from 31,242,709 in 1959. At Great Lakes and upper St. Lawrence River ports loadings showed a slight rise to 8,707,697 tons from 8,662,554, while Pacific Coast ports reported an increase of 14.8 per cent rising to 12,113,066 tons from 10,550,040. Shipments of wheat, barley, pulpwood, iron ore, gypsum, lumber, newsprint and general cargo accounted for 79.0 per cent of total loadings. Iron ore alone represented 37.2 per cent and wheat 13.6 per cent of the total loadings.

Loadings of lumber were up 724,855 tons in 1960, rising to 2,871,185 tons from 2,146,330 in the previous year. Bituminous coal increased from 8,305 tons to 496,576; clay and bentonite from 539,713 tons to 929,980; newsprint from 2,500,438 tons to 2,857,267; and, pulpwood from 1,155,423 tons to 1,439,963. Other significant increases were recorded in iron and steel bar etc., general cargo, woodpulp and limestone.

Iron ore shipments were down to 18,789,166 tons from 20,350,218 in 1959; gypsum declined to 4,241,836 tons from 4,674,084; wheat shipments dropped to 5,887,080 tons from 7,431,484; and, barley shipments decreased to 1,105,582 tons from 1,512,742. Other decreases included salt, down to 386,554 tons from 513,352, cement down to 137,500 tons from 236,256 and quartzite down to 21,003 tons from 102,190.

Cargoes unloaded from foreign countries were up 4.5 million tons or 13.1 per cent to 39,094,315 tons from 34,554,388 in 1959. Increases were recorded in all three geographic areas. Unloadings at Atlantic and lower St. Lawrence River ports were up 17.5 per cent to 17,834,172 tons from 15,174,363. Great Lakes and upper St. Lawrence River ports reported a 10.7 per cent increase to 19,000,258 tons from 17,160,633 and Pacific Coast ports showed an increase of 1.8 per cent to 2,259,885 tons from 2,219,392. Unloadings of crude petroleum increased by 2.8 million tons, rising to 6,951,074 tons from 4,125,395 in 1959 and unloadings of iron ore were up by 2.3 million tons to 5,504,110 tons from 2,306,040. Bauxite unloadings rose to 2,793,139 tons from 2,085,255, soyabeans to 620,027 tons

from 437,488 and wheat to 302,783 tons from 140,770. The bulk of the wheat unloaded at Canadian ports was United States wheat being transhipped at Canadian ports. After a complete stoppage in 1958, shipments of Canadian crude oil to Fort William from Superior by water was resumed. In 1960 the total amounted to 128,417 tons. Among the commodities for which a decline in unloadings was reported were petroleum oils, down to 3,845,187 tons from 4,274,587, bituminous coal down to 10,759,395 tons from 11,037,707, and gasoline down to 297,809 tons from 547,642.

The bulk of Canada's waterborne commerce is with the United States and the United Kingdom. These two countries accounted for approximately 65.3 per cent of all cargo loaded and unloaded. Cargoes loaded at Canadian ports destined to the United States were 12 per cent below the previous year, totalling 24,499,893 tons as compared with 27,843,492 in 1959. This represented 48.5 per cent of the total cargo loaded at Canadian ports in international shipping. Loadings at Atlantic and lower

St. Lawrence River ports destined to the United States decreased by 20.3 per cent to 13,618,633 tons from 17,076,735. At Great Lakes and upper St. Lawrence River ports loadings for the United States were down 5.1 per cent to 7,358,650 tons from 7,751,014 while at Pacific Coast ports loadings for the United States increased 16.8 per cent to 3,522,610 tons from 3,015,743. Shipments originated in the United States and unloaded at Canadian ports increased 6.2 per cent to 21,405,830 tons from 20,160,545 in 1959. Shipping between Canada and the United Kingdom increased 12.6 per cent. Cargoes loaded at Canadian ports for the United Kingdom rose 15.2 per cent to 11,352,557 tons from 9,853,083 in 1959, while unloadings decreased 6.4 per cent to 1,252,633 tons from 1,337,958 in 1959.

During 1960, cargoes loaded and unloaded at Canadian ports in international shipping amounted to 89,648,401 tons. Of this a total of 25,943,007 tons or 28.8 per cent was transported by vessels of Canadian registry.

August 24, 1961.
