CARGOES LOADED FOR AND UNLOADED FROM FOREIGN COUNTRIES

TONS WEIGHT PLUS TONS MEASUREMENT, 1951-1962

INTRODUCTION

Part I of the 1962 Shipping Report contains five tables which provide details of cargoes loaded and unloaded at Canadian ports in international seaborne or foreign shipping. Tables 1 and 2 show cargoes loaded by country of destination and by commodity, while tables 3 and 4 provide similar data for cargoes unloaded from foreign countries. Table 5 shows the number and registered net tonnage of vessels arriving at and departing from Canadian ports in international service, by registry of vessel. This table also provides a corresponding breakdown of cargo loaded and unloaded. Commencing with the 1962 report fishing vessels have been excluded from the count of vessel arrivals and departures. For this year such vessels have been tabulated but will be shown only in Tables 10 and 16 of Parts II and III. Thus the effect of this exclusion on the comparability of published statistics may be measured.

Part II which will be released shortly will contain additional tables pertaining to international shipping. These will include statistics for the individual ports covering vessel arrivals and departures and cargoes loaded and unloaded. Part III will include all available data relating to coastwise shipping including details of cargo. Parts IV and V which originated with the 1961 series will follow in order. Part IV will provide information as to origin and destination of cargo handled at eight selected ports while Part V will give the origin and destination of eight selected commodities handled at all Canadian ports.

Previous to 1952, a complete statistical picture of Canada's shipping activity was not available due to insufficient detail of the coastwise and inland

segments of the industry. The Bureau's annual "Canal Statistics" gives an analysis of traffic moving between Canadian ports but only that portion which uses the facilities of one or more of the canal systems. Also, some records of coastwise traffic were maintained by the National Harbours Board and certain Harbour Commissioners and Boards of Trade. In addition, special surveys were made for the Canadian Maritime Commission each year on cargoes carried into the St. Lawrence River—Great Lakes system by the principal Canadian shipping companies.

The great bulk of cargo, however, moving between Canadian ports on the Atlantic and Pacific coasts and on the Great Lakes and the St. Lawrence River was not reported. As a result, early in 1951 an inter-departmental committee, representing all interested parties, decided to attempt to secure the details of cargoes carried in the coastwise trade as it would provide another statistic towards the measurement of interprovincial trade in Canada and as it would be important to know the pattern of the coasting trade in case of an emergency.

With the excellent assistance of the Department of National Revenue whose customs officials instructed shipping officers in the new procedure of reporting their coastwise activities, these new data were collected beginning in January, 1952.

Commencing January, 1957 statistics on vessels in coastwise traffic were expanded to include the movement to and from non-customs ports.

Source and Treatment of Data

Shipping statistics are compiled from reports made by operators or agents of vessels arriving at and departing from Canadian ports. At ports where there are customs officials these officials act as agents for the Dominion Bureau of Statistics in collecting the reports and forwarding them to the Bureau. For other ports the reports are either forwarded through the nearest customs office or mailed direct to the Bureau.

Customs regulations regarding coastwise vessels were revised in April, 1955 to permit owners or masters of such vessels who obtain coasting licenses to enter and leave port without clearing at customs. Thus no longer is the owner or master required to present a shipping report directly to customs officials but instead may mail his report to the customs officials at the port concerned if it is more convenient. This new procedure has given the Bureau the task of ensuring that all licensed coasting vessels continually report all their shipping

activities. Failure to submit shipping reports can result in the cancellation of a vessel's coasting license by the Department of National Revenue.

A vessel is classed as being in foreign service when (1) it arrives from a foreign port as last port of call or departs for a foreign port as first port of call; (2) cargo is loaded for a foreign port or unloaded from a foreign port; (3) the registry of the vessel is other than Canada or the British Commonwealth even though the vessel may have arrived at one Canadian port from another or departed from a Canadian port for another.

Coasting service includes vessels of Canadian or British registry only, which arrive at one Canadian port from another or depart from one Canadian port for another and when no freight from a foreign port is unloaded or no freight for a foreign port is loaded.

If a vessel does not unload any freight or does not load any freight, it is classed as arriving or departing, respectively, "in ballast", regardless of the amount of freight it might have on board. Because of these definitions a vessel may arrive twice in foreign service and depart in coasting service on the same trip, and, consequently, the number of departures and arrivals in either class of service will not always be the same. Vessels built in Canadian ports will also cause a disparity in the number of arrivals and departures. There are also certain customs regulations in respect to fishing vessels that are responsible for some difference in reports of departures and arrivals.

Table 1 provides detailed information as to cargoes loaded at Canadian ports for foreign countries. It shows the country of destination and the kind of cargo with a further breakdown to show the tonnage carried by registry of vessel. Table 3 shows similar data for cargoes unloaded in foreign trade, i.e. country of origin, kind and tonnage of cargo and registry of vessel. For each of these tables, the ports in Canada have been grouped and allocated to three geographical regions, namely, Atlantic and lower St. Lawrence river, Great Lakes and upper St. Lawrence river and the Pacific coast.

Tables 2 and 4 give the total tonnage of each commodity loaded and unloaded at Canadian ports in international shipping. These tonnages are not complete in all cases since a small percentage of all commodities, other than those carried in bulk, is reported and tabulated as "general" cargo.

Tonnage data are required to be reported in tons weight of 2,000 pounds, but because of the practice in previous years of reporting tons in long tons of 2,240 pounds there is a possibility that some vessels did not report their cargoes in short tons. As of 1951, cargoes reported in tons measurement of 40 cu. ft. have been added to those reported in tons weight. Reports are not required from vessels of less than 15 registered net tons.

Included as Appendix A to Part I, is an historical table covering the period 1923-1962. This shows the total number of vessels arrived at and departed from Canadian ports, the registered net tonnage and the tons of cargo carried. Also included as Appendix B is a list of the countries and geographical areas used for origin and destination of vessels and cargoes. Appendix C provides a list of the commodities used for classifying cargoes. By reference to these the meaning of abbreviations is clarified.

REVIEW OF 1962 OPERATIONS

Cargoes loaded at Canadian ports for foreign countries reached a new high of 60,269,779 tons, 12.1 per cent above the 1961 record of 53,760,748 tons. Loadings were up in all divisions. Atlantic and Lower St. Lawrence river ports were up 17.1 per cent to 36,601,403 tons from 31,256,310 tons. Great Lakes and Upper St. Lawrence river ports were up 13.4 per cent to 9,388,618 tons from 8,280,996 tons and Pacific Coast ports were up moderately to 14,279,758 tons from 14,223,442. Of the total cargo loaded, iron ore accounted for 40.3 per cent; wheat, gypsum, lumber and newsprint 31.5 per cent; woodpulp, pulpwood, dolomite and general cargo 9.1 per cent, and all other cargo 19.1 per cent.

Iron ore and concentrates loaded showed the most marked increase, up 7,185,204 tons to 24,265,218 tons from 17,080,014 tons. Increases were also recorded in gypsum up to 4,099,270 tons from 3,866,610 tons; lumber and timber up to 3,054,367 tons from 2,878,388 tons; pulpwood up to 1,826,668 tons from 1,752,445 tons; dolomite up to 1,239,405 tons from 876,069 tons and woodpulp up to 1,080,201 tons from 1,016,899 tons. The major decrease in loadings was recorded in wheat, down 1,818,545 tons to 8,970,509 tons from 10,789,054 tons. Iron and steel scrap was down to 190,982 tons from 565,783 tons and general cargo was down to 1,361,081 tons from 1,563,951 tons.

Cargoes unloaded from foreign countries increased 2,697,964 tons to 41,885,319 tons from 39,187,355 tons, with all areas showing an increase.

Unloadings at Atlantic and Lower St. Lawrence river ports were up 5.7 per cent to 20,441,094 tons from 19,340,838 tons, Great Lakes and Upper St. Lawrence river ports rose 7.7 per cent to 19,087,753 tons from 17,717,556 tons and Pacific Coast Ports up 10.7 per cent to 2,356,472 tons from 2,128,961 tons. Shipments of iron ore and concentrates, aluminum ore and concentrates, bituminous coal, crude petroleum and fuel oil constituted 73.2 per cent of the total unloaded.

Import shipments of crude petroleum unloaded were up 7.3 per cent to 8,211,277 tons from 7,650,904 tons. This excludes 193,200 tons of Canadian crude petroleum unloaded at Fort William from Superior. Unloadings of bituminous coal increased to 10,875,140 tons from 10,654,936 tons; iron ore and concentrates to 5,813,857 tons from 5,354,546 tons; fuel oil to 3,731,837 tons from 3,207,041 tons; sand and gravel to 981,206 tons from 730,565 tons; and corn to 1,694,708 tons from 1,162,321 tons. Increases were also reported in sugar to 811,907 tons from 722,433 and soyabeans to 734,911 tons from 542,111. Unloadings of aluminum ore and concentrates decreased to 2,045,521 tons from 2,242,386 tons as did general cargo, down to 1,444,722 tons from 1,460,389 tons.

Trade with the United States and the United Kingdom accounts for the bulk of Canada's water-borne commerce. Cargoes shipped to and from these two countries reached a total of 66.5 million tons or 65.1 per cent of all cargo loaded and unloaded.

Loadings at Canadian ports destined for the United States were up 39.6 per cent to 32,999,943 tons from 23,645,834 tons in the previous year. This represented 54.8 per cent of the total cargo loaded at Canadian ports in international shipping as against 44.0 per cent in 1961. Loadings at Atlantic and Lower St. Lawrence river ports destined for United States ports increased 62.5 per cent to 20,952,181 tons from 12,893,133 tons. At Great Lakes and Upper St. Lawrence river ports loadings for the United States were up 17.3 per cent to 8,211,802 tons from 7,002,944 tons and at Pacific Coast ports were up 2.3 per cent to 3,835,960 tons from 3,749,757 tons. Shipments originating in the United States and unloaded at Canadian ports amounted to 23,487,638 tons compared with

21,935,887 tons in 1961. It should be noted that the United States figures shown above include shipping to and from Alaska and Hawaii. Cargo shipments between Canada and the United Kingdom decreased 2.3 per cent. Loadings for the United Kingdom decreased 2.2 per cent to 9,146,298 tons from 9,348,312 tons and unloadings decreased 4.1 per cent to 881,044 tons from 918,655 tons.

During 1962 the total tonnage of cargo loaded and unloaded in international shipping reached a new high of 102,155,098 tons. Of this, a total of 26,731,619 tons, or 26.2 per cent was carried in vessels of Canadian registry. This compares with a total of 25,322,074 tons or 27.2 per cent in Canadian vessels in 1961.
