INTRODUCTION

This publication presents statistics on the carriage of goods by the marine mode of transport in Canadian coastal waters, the Great Lakes and the St. Lawrence Seaway. This activity is alternatively described as domestic or coastwise shipping.

The information on coastwise shipping is collected by means of a series of reporting forms. These are completed by agents or operators of vessels and forwarded to Statistics Canada for editing, compilation and processing. These reporting forms are described as "Shipping Reports" and are explained under "Methodology". Shipping reports give details on the port, the vessel and the cargo transported. Information collected on these variables is combined to form the data base for coastwise shipping.

Table 15 summarizes vessel arrivals and departures and cargo loaded and unloaded in domestic shipping from 1946 to 1978 inclusive.

A List of Canadian Ports for which shipping data are available is shown at the end of this publication.

The List of Commodities published is based on the Standard Commodity Classification published by Statistics Canada. There are 217 categories of goods identified, non-specific categories such as general cargo and containerized freight are included in this list.

Since the program to collect international data was cancelled in 1978, a new data base will be completed from the A6 General Declaration form of Revenue Canada. These data will be published in International Vessel Traffic Statistics (Catalogue 54-004 quarterly) commencing with the first quarter of 1979 and annually under the same title in Catalogue 54-209.

Other water transportation data are made available on an occasional basis in the Water Transport Service Bulletin (Catalogue 54-003). Requests for data requirements which are not covered by these publications should be addressed to the Chief, Water Transport Section, Transportation and Communications Division, Statistics Canada, Ottawa, K1A 0T6.

INTRODUCTION

Cette publication présente des statistiques sur le transport maritime de marchandises dans les eaux côtières canadiennes, les Grands Lacs et la voie maritime du Saint-Laurent. On parle également de cabotage pour désigner la navigation nationale.

Les renseignements sur la navigation nationale sont recueillis au moyen d'une série de formulaires remplis par les agents ou les exploitants de navires et transmises à Statistique Canada en vue du contrôle, du rassemblement et du traitement des données. Une explication du contenu de ces "Rapports sur la navigation" figure à la section "Méthodologie". Les rapports de navigation servent à recueillir des renseignements sur le port, le navire et la cargaison transportée, qui sont alors totalisés pour produire la base de données sur la navigation nationale.

Le tableau 15 fait le résumé des navires entrés et sortis et des marchandises chargées et déchargées au titre du transport intérieur, de 1946 à 1978 inclusivement.

Une Liste des ports canadiens pour lesquels on dispose de données sur la navigation est publiée dans la dernière partie de cette publication.

La liste des marchandises faisant l'objet des statistiques est fondée sur la Classification type des produits publiée par Statistique Canada et comprend 217 catégories de produits identifiés ainsi que des catégories non déterminées comme les cargaisons générales et les marchandises conteneurisées.

Comme le programme de données internationales a été annulé en 1978, une nouvelle base de données sera produite à partir de la formule de déclaration générale A6 de Revenu Canada. Ces données paraîtront dans la publication trimestrielle Statistiques du transport maritime international (n° 54-004 au catalogue), à compter du premier trimestre de 1979 et dans la publication annuelle du même titre (n° 54-209 au catalogue).

D'autres données sur le transport par eau paraissent à l'occasion dans le bulletin de service Transport par eau (n° 54-003 au catalogue). Les demandes de renseignements qui ne figurent pas dans ces publications doivent être adressées au chef de la Section du transport par eau, Division des transports et des communications, Statistique Canada, Ottawa, K1A 0T6.

Background

In 1938 the responsibility for publishing basic shipping information on vessel traffic and bulk commodity loadings and unloadings at Canadian ports was transferred from the Customs Division of the Department of National Revenue to the Dominion Bureau of Statistics (now Statistics Canada). Five commodity group classifications were reported: agricultural products, animal products, mine products, forest products and manufactures and miscellaneous products. At that time coverage of the vessel traffic was confined to the 10 ports under Harbour Commission control.

A revised reporting form was designed and implemented in 1940. Data were collected and compiled from this report for nine commodity classes: general, coal, grain, iron and steel, lumber and timber, oil (including gasoline), ores and stone, wood pulp, and miscellaneous.

Since 1940, the scope has been expanded to collect origin and destination data, more commodity information on cargo carried, and additional vessel traffic information on vessel movements at major Canadian ports.

Originally, data were collected on both international and coastwise shipping, however, because of reductions in government expenditures in late 1978, the international portion was discontinued.

Objectives

The coastwise shipping data base was established to provide basic vessel and cargo data for the use of federal and provincial government departments, shipping firms, consultants, interested associations and businesses concerned with trade, industry and transport and to:

- record the pattern of domestic commodity movements;
- measure the quantity of domestic cargo handled at Canadian ports;
- identify the ports of origin and destination of domestic commodity movements;
- assist in transportation studies; and
- provide information for the presentation of briefs, submissions and inquiries to regulatory authorities and/or commissions.

Historique

En 1938, le Bureau fédéral de la statistique (maintenant Statistique Canada) déchargeait la Division des douanes du ministère du Revenu national de la publication des renseignements de base sur la navigation et le chargement et le déchargement de marchandises en vrac dans les ports canadiens. Il y avait alors cinq groupes de marchandises: les produits agricoles, les produits d'origine animale, les produits miniers, les produits forestiers et les produits manufacturés et divers. Le champ de l'enquête se limitait au trafic des navires dans les 10 ports placés sous l'autorité de la Commission des ports.

Une nouvelle formule de déclaration a été conçue et appliquée en 1940. Les données étaient recueillies à l'aide de cette formule et totalisées pour neuf groupes de produits: marchandises générales, charbon, céréales, fer et acier, bois de construction et bois en grumes, pétrole (y compris l'essence), minerais et pierre, pâte de bois et produits divers.

Depuis 1940, l'enquête a été élargie afin de recueillir des données sur l'origine et la destination, des renseignements plus détaillés sur les marchandises transportées et des données supplémentaires sur le mouvement des navires dans les principaux ports canadiens.

À l'origine, on recueillait des données sur la navigation nationale et internationale; toutefois, en raison de la compression des dépenses publiques vers la fin de 1978, on a cessé la collecte des données sur la navigation internationale.

Objectifs

La base de données sur la navigation nationale a été constituée afin de fournir des renseignements essentiels aux ministères fédéraux et provinciaux, aux entreprises maritimes, aux conseillers et aux associations et entreprises intéressées au commerce, à l'industrie et aux transports. Voici les autres objectifs poursuivis:

- établir un schéma des mouvements nationaux de marchandises;
- mesurer le volume des cargaisons nationales manutentionnées dans les ports canadiens;
- identifier les ports d'origine et de destination des marchandises nationales;
- aider aux études sur le transport; et
- fournir des renseignements à l'appui de mémoires, comptes rendus et requêtes adressés aux autorités ou aux commissions investies d'un pouvoir de réglementation.

Concepts

Vessel

A vessel is classed as being in coastwise shipping when:

it is of Canadian registry, sails between two Canadian ports and loads or unloads no foreign freight, or

it is of foreign registry, but is granted a waiver by the Canadian Transport Commission to engage in coasting service.

Only data relating to those vessels which are engaged in port-to-port transportation of goods for compensation have been included; all intraport movements have been excluded.

A vessel is considered arriving or departing "in ballast" if cargo is neither loaded nor unloaded at a port.

Coastwise shipping data are collected for vessels calling at coastal, St. Lawrence River, Great Lakes, Hudson Bay and Arctic Ocean ports. Waters such as Lake Winnipeg and the Mackenzie River are not included.

The "gross registered tonnage" of a vessel is the capacity in cubic feet of the spaces within the hull and of the enclosed spaces above the deck divided by 100.

The "net registered tonnage" of a vessel is the gross registered tonnage less the space, expressed in tons, that is used for the accommodation of personnel, propelling machinery and fuel.

Cargo

The cargo is loaded and unloaded at Canadian Ports. Domestic cargoes which are loaded in one navigational season but not discharged until the following season are recorded in the following year's annual report. This is particularly important in the movements of grains.

"General cargo" refers to the commodities which were not specifically identified on the reporting forms. Bulk shipments are not included with general cargo. Bulk shipments usually refer to commodities that are loose or in mass such as all grains, cement, coke, petroleum, liquids carried in tanks, ores and minerals, pig iron, scrap iron and steel, logs, raw sugar and pulpwood.

Concepts

Navires

Entrent dans la catégorie de la navigation nationale:

les navires immatriculés au Canada qui naviguent entre deux ports canadiens, sans charger ni décharger de fret étranger; ou

les navires immatriculés à l'étranger qui détiennent une autorisation de cabotage de la Commission canadienne des transports.

Seules les données relatives aux navires transportant des marchandises payantes d'un port à un autre sont présentées ici; on n'a pas tenu compte des mouvements effectués dans un même port.

Un navire est considéré comme entrant ou sortant "sur lest" si des marchandises ne sont ni embarquées ni débarquées à un port.

Les données sur la navigation nationale sont recueillies pour les navires qui font escale aux ports côtiers et à ceux du fleuve Saint-Laurent, des Grands Lacs, de la Baie d'Hudson et de l'océan Arctique. Certaines eaux comme le lac Winnipeg et le fleuve Mackenzie ne font pas partie du champ de l'enquête.

La "jauge brute au registre" correspond à la capacité en pieds cubes de la coque et de l'espace fermé au-dessus du pont, divisée par 100.

La "jauge nette au registre" d'un navire correspond au nombre de tonnes brutes au registre, moins les quartiers de l'équipage, la salle des machines et les réservoirs de mazout.

Cargaison

Les marchandises sont chargées et déchargées dans les ports canadiens. Les marchandises de cabotage chargées pendant une saison de navigation, mais non déchargées avant la saison suivante, sont prises en compte dans le rapport annuel de l'année suivante. Ce point est très important lorsqu'on étudie le commerce des céréales.

Les "marchandises générales" sont celles qui ne peuvent être identifiées avec précision sur la formule de navigation. Les livraisons en vrac, qui ne sont pas des marchandises générales, s'entendent habituellement de marchandises pêle-mêle, sans emballage ni arrimage; en voici des exemples: toutes les céréales, le ciment, le coke, le pétrole, les liquides transportés dans des réservoirs, les minerais et minéraux, la fonte en gueuses, les déchets de fer et d'acier, les billes de bois, le sucre brut et le bois à pâte.

Commodity weights are shown both in short tons (2,000 lb.) and in metric tonnes (1 000 kg).

Port

The ports must be located within Canadian geographic limits.

Some ports frequently engage in "lightering" where the cargo is loaded or unloaded in the harbour rather than at a dock or wharf and the tonnage is included with the port totals.

The term "origin" and "destination" refer to the ports of loading and unloading and not to terminating points of the goods or shipments.

Canadian ports have been grouped into three regions:

Atlantic, Arctic waters, northern Manitoba, northern Ontario, northern Quebec and the Lower St. Lawrence River ports (Montréal and below);

Great Lakes and Upper St. Lawrence River ports (above Montréal); and

Pacific ports.

Universe

For each vessel entering or leaving a Canadian port in coastwise shipping, a report to record this activity must be completed and filed with Statistics Canada. However, reports are not required for movements of:

cargo vessels under 15 net registered tons;

tugs or other vessels under 15 gross registered tons; and

Canadian naval or fishing vessels.

Methodology

The Reporting Forms

The following shipping reports are used to obtain coastwise shipping statistics:

The S.1 Shipping Report. This is the principal form used for data collection. Agents or operators of vessels arriving at or departing from Canadian ports complete this report for each vessel within the universe. The S.1 Shipping Report includes vessel information,

Les quantités sont indiquées en tonnes courtes (2,000 liv) et tonnes métriques (1 000 kg).

Port

Les ports doivent être situés dans les limites géographiques du Canada.

Dans certains ports, les marchandises sont fréquemment embarquées ou débarquées "par allège" plutôt qu'à un dock ou un quai. Le tonnage est alors compris dans le tonnage total du port.

Les termes "origine" et "destination" ne concernent que les ports de chargement et de déchargement et pas nécessairement le point de déchargement final (qui peut être à l'intérieur des terres).

Les ports canadiens ont été groupés en trois régions:

les ports de l'Atlantique, de l'Arctique, du nord du Manitoba, du nord de l'Ontario, du nord du Québec et du bas Saint-Laurent (le port de Montréal et ceux qui sont situés en aval de celui-ci);

les ports des Grands Lacs et du haut Saint-Laurent (en amont de Montréal); et

les ports du Pacifique.

Univers

Un rapport doit être rempli et envoyé à Statistique Canada pour chaque caboteur qui entre dans un port canadien ou qui le quitte. Sont toutefois dispensés de cette déclaration:

les cargos d'une jauge nette au registre inférieure à 15 tonnes;

les remorqueurs ou autres navires d'une jauge brute au registre inférieure à 15 tonnes; et

les navires de la marine canadienne et les bateaux de pêche.

Méthodologie

Les formules de déclaration

Les rapports suivants sur la navigation servent à recueillir les données sur le cabotage:

La formule S.1. C'est la principale formule utilisée pour la collecte des données. Les agents ou exploitants de navires qui arrivent à un port canadien ou le quittent doivent remplir ce rapport pour chaque navire de l'univers. Le Rapport sur la navigation S.1 recueille des renseignements sur le

such as name, country of registry, net and gross tonnage and cargo information, such as: commodity description, tonnage and ports where cargoes were loaded and unloaded. These variables constitute the data base for coastwise shipping statistics.

The S.3 Shipping Report. This report is used for vessels making several calls along a regular route. Each report covers one round-trip voyage. These reports are specifically used for vessel movements along the coast of Newfoundland; or, for both to and from Newfoundland and the mainland.

Collection

Shipping reports are completed in duplicate and filed with the Collector of Customs at the time of vessel departure. When vessels call at non-customs ports, the shipping reports covering these calls are taken or mailed to the nearest Collector of Customs. The original copies are then mailed daily to Statistics Canada, Ottawa by the customs officials of Revenue Canada.

Processing

Upon receipt, in the Water Transport Section of the Transportation and Communications Division, the documents are manually sorted and edited for consistency and reliability of reported data. Selected fields are then coded to facilitate data processing.

The coding and editing procedures involve assignment of numeric codes to all ports and commodities. Checking for consistency of information in comparison to previous trends and port activities, the use of reference materials for missing or questionable data and the follow-up of questionable reports by telephone. In this case, either the shipping companies or customs offices involved are contacted.

Reliability and Limitations of the Data

While every effort has been made to remove methodological and clerical errors, the statistics contained in this report should be used with caution and due allowance for their limitations. Although the data are considered representative of coastwise activity, the figures are known to understate shipping activity as well as distort specific commodity figures. Generally, the factors contributing to these problems can be grouped into the following broad categories. (For other related limitations refer to the section on "Concepts".)

navire tels que le nom, le pays d'immatriculation, la jauge nette et brute et des données sur les marchandises (description de la cargaison, jauge et ports d'embarquement et de débarquement). Ces variables constituent la base de données sur la navigation nationale.

La formule S.3. Ce rapport est utilisé par les navires qui font plusieurs escales sur leur itinéraire régulier. Chaque rapport vise un voyage aller-retour, plus particulièrement les mouvements le long de la côte de Terre-Neuve ou ceux entre Terre-Neuve et le continent.

Collecte

Les Rapports sur la navigation sont remplis en double exemplaire et remis au receveur de la douane au moment du départ du navire. Lorsqu'un navire fait escale à un port non douanier, la formule doit être remise ou postée au plus proche receveur de la douane. Chaque jour, les douaniers de Revenu Canada envoient par la poste l'original des rapports à Statistique Canada.

Traitement

Dès réception des documents, la Section du transport par eau de la Division des transports et des communications les trie et les vérifie afin d'en déterminer l'uniformité et la fiabilité. Certaines zones du questionnaire sont alors codées afin de faciliter le traitement des données.

Lors du codage et du contrôle des données, on attribue des codes numériques à tous les ports et à toutes les marchandises, on vérifie l'uniformité des renseignements sur les tendances et les activités portuaires par rapport aux déclarations précédentes et l'on utilise des documents de référence lorsqu'il manque des chiffres ou que les données sont douteuses; dans le cas des rapports peu fiables, on effectue un suivi téléphonique en communiquant avec la société de navigation ou le bureau de douane en cause.

Fiabilité et limites des données

Même si l'on a tenté par tous les moyens possibles d'éliminer les erreurs de méthodologie et de traitement, l'utilisateur devrait se servir des statistiques contenues dans ce bulletin avec beaucoup de circonspection. Bien qu'en principe les chiffres représentent l'activité dans les ports, on sait qu'en réalité ils la sous-estiment et faussent les données sur certaines marchandises. Dans l'ensemble, les causes de ces problèmes peuvent être groupées dans les catégories ci-dessous. (La rubrique portant sur les "Concepts" de l'enquête explique les autres limites.)

Incomplete Coverage

Shipping reports are not submitted for all vessel arrivals and departures at Canadian ports. It is estimated that 10% to 20% of all shipping reports are missing principally due to the poor response of particular carriers.

Data on cargo and vessel movements for vessels not in the universe are excluded from this publication. This has a significant impact on shipping activity for such ports as the North Arm Fraser River Harbour where most of the vessels providing marine transportation are of a size which excludes them from the universe.

Distortion in the Data

The term "general cargo" is considered by some respondents to be synonymous with "miscellaneous". Consequently, general cargo figures tend to be inflated and commodity data may be somewhat lower than actual.

Commodity descriptions tend to reflect rate and tariff classifications which may differ from the commodity groupings contained in the Standard Commodity Classification. Some distortions of the data may result from judgement decisions by respondents or editors. In addition, some commodity information and tonnage are reported as aggregated summaries of the cargo and it is therefore difficult to code this type of information to precise commodity groups.

The conversion of some units to other measurements can lead to distortion of the data when precise knowledge of the commodity in question is unknown (e.g., specific gravity for liquid commodities).

Champ d'observation incomplet

Les rapports sur la navigation ne sont pas remis pour tous les mouvements de navires dans les ports canadiens. On estime qu'il manque de 10 % à 20 % des rapports, principalement à cause de la piètre collaboration de certains transporteurs.

Les données sur les mouvements des cargos et des navires qui ne font pas partie de l'univers ne sont pas comprises dans cette publication. Ce champ d'observation limité a un effet important sur les données des ports comme celui de l'embranchement nord du fleuve Fraser, où la plupart des navires qui y accostent ont une jauge inférieure à celle des navires compris dans l'univers.

Distorsion des données

Certains enquêtés estiment que l'expression "marchandises générales" est synonyme de "divers". Par conséquent, les chiffres relatifs aux marchandises générales tendent à être gonflés et les données sur chaque marchandise, quelque peu sous-estimées.

Les appellations de marchandises tendent à s'inspirer des nomenclatures douanières qui peuvent différer des groupes de la Classification type des produits; dans certains cas, les données peuvent être faussées parce que l'enquêté ou le vérificateur doit prendre une décision. En outre, certains chiffres de marchandises et de tonnage représentent un groupement de marchandises; il est donc difficile d'effectuer le codage selon le groupe précis de produits.

L'utilisation de facteurs de conversion peut entraîner des écarts parce qu'il n'est pas facile de convertir certaines unités sans connaître les caractéristiques techniques des marchandises en cause (par ex., la densité des liquides).

These highlights touch on notable activities in coastwise shipping, including vessel arrivals and departures and principal commodities transported in 1978.
