PIPE LINE TRANSPORT

Catalogue number	Title	Price
	Annual	
55 - 201	Oil Pipe Line Transport. Approx. 27 p.p. Barrels of oil carried by gathering and trunk lines by province, by month; receipts and disposition, pipe line mileage, barrel miles, pumping stations; balance sheet, property account revenues, expenses, income, employees, salaries and wages by company	
55 - 202	Gas Pipe Line Transport. Approx. 32 p.p. Mcf.receipts and disposition of natural gas by month by company and by province; pipe line mileage; balance sheet, property account, income account, employees and earnings	
	Monthly	
55 - 001	Oil Pipe Line Transport. Approx. 8 p.p. Barrels of oil carried by gathering and trunk lines, receipts and disposition, barrel miles, revenues, employees, salaries and wages 20¢ per copy, \$2.00 per copy.	
55-002	Gas Pipe Line Transport. Approx. 8 p.p. Mcf. receipts and disposition of natural gas by company, by month; operating	

Remittances should be in the form of cheque or money order, made payable to the Receiver General of Canada and forwarded to the Publications Distribution Unit, Financial Control Section, Dominion Bureau of Statistics, or to the Queen's Printer, Ottawa, Canada.

SYMBOLS

The interpretation of the symbols used in the tables throughout this publication is as follows:

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- revised figures.

INTRODUCTION

The 1960 report of Oil Pipeline Transport has been extensively revised to improve the presentation and quality of the material. The report attempts to meet two basic needs, (1) presentation of material on the commodity concept and (2) presentation of material in the transportation concept. As a result the receipts and disposition of petroleum, the commodity, has been completely reviewed. Monthly statistics on the revised basis (as compared to material presented in the pipe line transport monthly reports) for 1960 and annually 1959 are included in the report and is in conformity with material that will be provided monthly for 1961 and 1962. Historical material on both a monthly and annual basis will eventually be compiled and published.

 The commodity, petroleum, for this report is divided into three groups (a) crude oil and equivalent which includes natural gasoline and condensate (b) liquefied petroleum gases and (c) petroleum products. The transportation sectors that are considered are gathering lines and trunk lines. All receipts of pipe lines are broken down by the type of commodity and the transportation unit. All the crude oil received by each transportation unit has a disposition which consists of delivery, inventory changes, pipe line uses, or lost and unaccounted for.

Because some of the pipe line units extend into U.S.A. and return to Canada, all statistics include the commodity disposition in the United States but the transportation equivalent to these operations is not included in the statistics. A glossary of terms is given on page 27.

Review of Survey Results:

Domestic receipts of crude oil in all pipe line systems increased from 178 million to 185 million barrels. However, imported receipts declined so that the total oil moved in Canada was up only slightly (0.8 per cent over the previous year). Nevertheless the increase in movements of oil from western Canada to markets which were far distant more than made up for the relatively short distance movements of imported crude. As a result total barrel miles in trunk lines increased by 4.2 per cent.

Total domestic receipts accounted for 97.6 per cent of the total of the 189,534,221 barrels of crude oil produced.

Receipts directly from fields accounted for most of the domestic receipts of pipe lines with the remaining oil coming from processing plants, the majority of the latter being natural gas and condensate.

Alberta, the province with the largest crude oil production, accounted for 48.7 per cent of all crude oil receipts followed by Saskatchewan, 19.0 per cent and Manitoba 1.8 per cent. The first pipe line movements of crude oil in northeastern British Columbia occurred in December but were a negligible part of the national totals.

Net deliveries of crude oil were made in Ontario, 26.5 per cent, British Columbia 8.8 per cent, Alberta 7.7 per cent, Saskatchewan 6.9 per cent and Manitoba 4.3 per cent. The deliveries in Quebec which accounted for 30.0 per cent were all imported crude.

Most receipts and deliveries of products occurred in Ontario and Quebec. Nearly all product deliveries were in Ontario with the movement being from refinery centres in Sarnia and Montreal into the product defficient areas between these major refining centres, the largest of which is the Toronto Hamilton area.

Gathering lines accounted for almost all of the domestic receipts. They delivered most of the crude oil, to trunk lines, 95.7 per cent, and to refineries, 3.6 per cent.

Total pipe line mileage increased 8.0 per cent to 8,436 miles; gathering mileage increased 11.7 per cent and trunk 3.3 per cent while products lines increased 8.2 per cent. The latter increase was accounted for by Yukon Pipelines Limited, included in this report for the first time. The major construction projects were: Federated Pipe Lines Ltd., which showed the greatest increase in pipe line mileage during the year, increased the gathering line 81 miles and the trunk line 80 miles. Other large increases were mainly in gathering lines, Trans-Prairie Pipelines Ltd. 95 miles, Producers Pipelines Ltd. 77 miles, Pembina Pipe Line Ltd. 66 miles and Peace River Oil Pipe Line Co. Ltd. 44 miles.

Most of the pipe line mileage is in 4"-5" pipe in the gathering systems and in 21"-26" pipe in the transmission systems. There was an increase of seven pumping stations during the year representing an increase of 15,200 horse power. The largest increase was Interprovincial Pipe Line which added over 13,000 horse power.

Trunk line movements of oil by pipe line increased some five million barrel miles while the average length of haul increased to 252.6 miles and the total ton mile movements amounted to 17,140,986,651. The average daily throughput in trunk lines amounted to 699,063 barrels of crude oil and equivalent while the average mile of pipe carried 45,194 barrels of crude oil per day.

The total capacity of pipe lines delivering into Edmonton amounted to 518,000 barrels per day while the capacity out of Edmonton was 578,500.

The property account of the pipe line industry increased \$17 million by gross additions of \$23 million, less other changes including adjustments of \$4 million and retirements of \$2 million. Most of the additions, \$16 million were in pipe lines, 70 per cent of the total. This is the third successive increase as a per cent of gross additions, from 43 per cent in 1958.

The total capital expenditures of the industry were estimated to be \$18.2 million. However, certain non-responding companies were estimated to have spent \$3.3 million so that the estimate of total capital expenditures approximates \$21.5 million. The Capital Expenditure report published by the Business Finance Division of the Bureau includes only the capital expenditures on new construction, that is they do not include capital expenditure of material that is second hand, nor do they report capital expenditure of land and rights-of-way. In addition differences occur because companies report actual payments on construction accounts, whereas gross additions include clearing accounts such as "construction in progress" accounts.

In addition to the capital expenditures, the industry spent approximately \$3.3 million on repair expenditures. Other industries including crude oil

producing and refining spent approximately \$2 million on pipe lines and \$20 million on oil storage tanks.

Total assets of the industry decreased due to reduction in special deposits, cash on hand and investments, while the property account after depreciation increased \$4 million but was more than offset by the aforementioned decreases. The decreases in assets were accompanied by decreases in the long term debt and current liabilities.

Interprovincial companies dominated the property account and assets of the industry, accounting for 67.9 per cent of fixed assets and 50.0 per cent of total assets. The two major trans-continental pipe lines, Interprovincial Pipe Line Company and Trans Mountain Oil Pipe Line Company accounted for 63.9 per cent of total assets.

Depreciation amounted to 28.7 per cent of the property account while the depreciation taken during the year was 18.9 per cent of operating revenues, and 4.7 per cent of the property account. The current ratio of the industry amounted to 1.3:1.

The operating revenues of pipe line companies amounted to \$94 million of which \$14 million was received from transportation in gathering lines, \$74 million in trunk lines and \$6 million other. Operating expenses accounted for 24.3 per cent of all operating revenues, depreciation 18.9 per cent and interest on long term debt 13.5 per cent. The net income for the industry was \$44 million before taxes and after income taxes \$23 million, 12.0 per cent more than last year.

The total number of employees declined slightly during the year while the total earnings increased so that the average earnings per employee increased 4.0 per cent.

STATISTICAL TABLES

TABLE 1. Receipts and Disposition of Crude Oil, Condensate and Natural Gasoline, by Month, 1960

Oil held in lines and tanks by shippers and carriers.
 Canadian system only, Canadian oil held in bond in U.S.A. amounted to 6,059,936 barrels.
 Equivalent ton miles 17,140,986,651.

GLOSSARY OF TERMS

Receipts

The oil received by the pipe line company as gauged or metered and reported by the responding company. Receipts may be of several categories: receipts from fields which may be from batteries or wellheads; from processing plants (plants which process natural gas and recover liquid hydro carbon); imports metered at the United States borders; receipts from refineries.

Deliveries

Deliveries are the oil volumes measured at the points of delivery either at the refinery, at the border, at the truck or rail loading terminal, and at the refinery or bulk plant terminal.

Transfers

Are the movements of petroleum between two different pipe line companies.

Inventory and Other Changes

Are the changes of oil held by the pipe lines in their system either in the lines or in the tanks and include changes of oil held by Canadian pipe line systems in the United States.

Deliveries to Other Carriers U.S.A.

Are deliveries of Canadian oil held in bond in U.S.A. to tanker loading facilities on the Great Lakes for return to Canada.

Pipe Line Fuel Losses and Unaccounted for

Is a residual item which includes the fuel used by the pipe line pumping stations, oil lost due to pipe line handling, and other losses which cannot be accounted for.

Crude Oil

A naturally occurring liquid hydrocarbon.

Liquefied Petroleum Gases

Naturally occurring gaseous hydrocarbons which liquefy only under conditions of increased pressurs and/or decreased temperature. The main com-

ponents are propane and butane. Liquefied refining gases are the equivalent of the above produced in refineries.

Petroleum Products

Are all products resulting from the processing of crude petroleum in the refining operation, including liquefied refinery gases.

Pipe Line Systems

Are the various types of pipe lines and ancillary facilities such as pumping stations, including both gathering and/or trunk lines.

Transportation Sectors

- (a) Gathering lines: usually a small diameter pipe operating within oil fields and carrying the oil from the wellhead or battery to common collecting point or points.
- (b) Trunk lines: pipe lines generally of larger diameter running from the common collecting point or points in fields to refineries, other pipe line systems or to termination points such as bulk plants, truck and rail loading facilities, etc. The trunk lines may be likened to intercity movements to truck and rail.

Net Receipts

The unduplicated receipts of all pipe line companies in Canada.

Net Deliveries

The unduplicated deliveries of all pipe lines in Canada.

Gross receipts and deliveries

The receipts or deliveries of all pipe line companies in Canada including intercompany transfers.

Definitions of the financial accounts may be found in "Uniform Classification of Accounts for Oil Pipe Line Companies", published by the National Energy Board.
