SYMBOLS

The interpretation of the symbols used in the tables throughout this publication is as follows:

- .. figures not available.
- nil or zero.
- r revised figures.

INTRODUCTION

The 1961 Oil Pipeline Transport report continues the concepts introduced in the 1960 publication; that is, data are provided in the three areas of petroleum commodities, of transportation and of financial statistics.

The commodities carried by the oil pipelines are divided into three groups:

- (a) Crude oil and equivalent including natural gasoline and condensate
- (b) Liquefied petroleum gases
- (c) Refined petroleum products.

The Transportation component is divided into two sectors:

(a) Gathering - Crude oil pipelines1

(b) Trunk - Crude oil pipelines Product pipelines.

All receipts of pipelines are broken down by commodity group for each transportation sector. All the petroleum received by each transportation sector has a disposition which consists of deliveries, inventory changes, pipeline uses, and lost and unaccounted for.

Some pipelines extend into United States and return to Canada; the statistics account for the commodity disposition in the United States but the transportation equivalent of these operations is not included. A glossary of terms is given on page 37.

Review of Survey Results

Due to a 19 per cent increase in domestic production of crude oil in 1961 from 1960, the oil pipeline industry had an increase of 20 per cent in its receipts of domestic crude oil, while imports of crude oil decreased slightly.

Exports of crude oil increased approximately 30 per cent from the total for 1960, and deliveries to refineries increased 5 per cent. Deliveries of liquefied petroleum gases and products increased approximately 3 per cent.

Production of crude oil in Canada in 1961 amounted to about 229.6 million barrels valued at approximately \$507 million at the field. The pipeline "transportation burden" to move this crude oil to market (including exports to the United States-Canadian border) amounted to approximately \$90.8 million or about 15 per cent of the total delivered value.

Net receipts of crude oil by pipelines were 301.5 million barrels, an increase of 13.3 per cent from last year's total of 266.1 million barrels. Alberta continued to contribute the largest proportion of receipts, 53.3 per cent, followed by Quebec, 26.1 per cent (imported crude) and Saskatchewan, 18.2 per cent. British Columbia for the first time had significant pipeline operations with receipts of 874,000 barrels.

Product pipelines received a total of 51.0 million barrels, an increase of 3 per cent over 1960. Receipts by product pipelines from processing plants increased approximately 7 per cent while receipts from refineries and bulk plants increased 3 per cent. Ontario accounted for 64 per cent of all receipts followed by Quebec with 33 per cent;

practically all deliveries were made in Ontario, as a result of interprovincial movements of products from Quebec to Ontario through the Trans-Northern Pipe Line Company.

Trunk pipelines increased their traffic by 23.4 per cent to 147 billion barrel miles or 21.4 billion ton miles. The average length of haul increased to 492.2 miles per barrel compared with last year's 390.4 miles. The throughput for the average crude oil trunk pipeline system mile was 95,000 barrels per day and for December 1961 was 110,000 barrels per day. The trunk pipeline revenue per barrel mile amounted to 0.057 cents or 0.39 cents per ton mile. The rated capacity for the average crude oil trunk pipeline system mile is estimated to be 150,000 barrels per day.

Pipeline mileage increased by 1,117 miles in 1961; approximately half of this increase was construction by Western Pacific Products & Crude Oil Pipelines Ltd. in British Columbia. Major additions are shown below.

	miles
Western Pacific Products & Crude Oil Pipelines Ltd.	505
Peace River Oil Pipe Line Co. Ltd	183
Trans-Prairie Pipelines Ltd	105
Federated Pipe Lines Ltd	68
Rimbey Pipe Line Co. Ltd	66
Pembina Pipe Line Ltd	54
Rangeland Pipe Line Division, Hudson's Bay	
Oil and Gas Company Limited	52
Producers Pipelines Ltd	43

¹ Crude oil in this publication includes condensate and natural gasoline.

Revised figure.

The total oil pipeline mileage in Canada, 9,554 miles, includes 1,359 miles of parallel and loop lines; thus the pipeline system mileage operated amounts to 8,195 miles.

In the United States, Trans Mountain Oil Pipe Line Company (through its wholly owned subsidiary, Trans Mountain Oil Pipe Line Corporation) operates 64 miles of pipeline in the State of Washington. Interprovincial Pipe Line Company, through its wholly owned subsidiary Lakehead Pipe Line Company Inc., operates 1,339 miles in the United States as follows:

326 miles — 18'' — from Gretna, Manitoba to Superior, Wisconsin

326 miles — 26'' — from Gretna, Manitoba to Superior, Wisconsin

641 miles - 30" - from Superior, Wisconsin to Sarnia, Ontario,

38 miles - 34" - loop from Clearbrook, Minn. to Superior, Wisconsin

8 miles - 20"-two 4 mile lines across the Straits of Mackinac, Michigan,

Montreal Pipe Line Company Limited operates 236 miles of pipeline from Portland, Maine to Montreal, Quebec, of which approximately 160 miles is in the United States. The United States Army operates a 625 mile 8" pipeline from Haines to Fairbanks, Alaska, through 250 miles of the Yukon. This latter pipeline does not receive or distribute oil in Canada, and consequently is not included in the statistics.

Total gross additions to fixed assets for the oil pipeline industry amounted to \$51.9 million of which land and right-of-way amounted to \$4.1 million. The capital expenditures for new physical assets compiled by the Business Finance Division of the Dominion Bureau of Statistics do not include expenditures for land or right-of-way, expenditures on material and equipment that have been used previously in Canada, and certain other expenditures and adjustments which are not considered to be of a capital nature. The Business Finance Division survey indicated that expenditures for new physical assets for 1961 were \$47.5 million including \$4 million spent for machinery and equipment. These

statistics indicate that \$400,000 was spent on used material and equipment, or were non capital expenditures and adjustments.

The main increase in property was accounted for by the building of Western Pacific Products & Crude Oil Pipelines Ltd., which made up almost \$30 million of the \$50 million increase.

The industry, in order to finance its operations had to obtain \$181 million. The main sources of these funds were: operating revenue \$99 million, the issuance of long term debt \$37 million, the issuance of equity securities \$12 million, and an increase of current liabilities \$9 million.

The use of these funds was: operating expenses \$63 million, investment in plant and property \$52 million, redemption of long term debt \$13 million, increase of cash \$13 million and dividends \$31 million.

Total operating revenues of the pipeline industry consisted of \$107 million, 78 per cent of which was derived from the operation of trunk lines. Total operating expenses amounted to \$24.5 million while the net operating income was \$82 million, 76 per cent of the total operating revenues. The largest individual deduction against income was depreciation, \$18.7 million for a rate of 3.5 per cent per year. Interest on long term debt amounted to \$12.8 million for an average interest rate of 4.0 per cent per year. The net income before income tax was \$56.6 million (53 per cent of operating revenues) and after income tax, \$30.7 million.

Total assets of the industry amounted to \$556 million; fixed assets accounted for \$410 million or 73.7 per cent of all assets. Interprovincial companies accounted for 64.6 per cent of the industry's assets. The "long term debt-equity" ratio was to 2:1, while the current ratio was 1.4:1.

The total number of employees decreased by 3 per cent while the average annual earnings increased by 2.5 per cent. Alberta had the largest number of employees, 47 per cent of the industry total.

The following table presents selected statistics for the oil pipeline industry for 1959 to 1961.

GLOSSARY OF TERMS

Barrel Miles

One barrel of oil moved one mile; ton miles are calculated by converting barrel miles of oil to the equivalent weight in short tons. Trunk line system barrel miles only are included because of the difficulty of collecting reliable and consistent data for gathering systems, together with the fact that gathering systems have a very short average commodity mile movement, and as a result their inclusion would add only a very small percentage to the total.

Crude Oil

A naturally occurring liquid hydrocarbon.

Deliveries

Deliveries are the oil volumes measured at the points of delivery either at the refinery, at the point of export, at the truck or rail loading terminal, and at the refinery or bulk plant terminal.

Deliveries to Other Carriers U.S.A.

Are deliveries of Canadian oil held in bond in U.S.A. to tanker loading facilities on the Great Lakes for return to Canada.

Gross Receipts and Deliveries

The receipts or deliveries of all pipeline companies in Canada including intercompany transfers.

Inventory and Other Changes

Are the changes of oil held by the pipelines in their system either in the lines or in the tanks and include changes of oil held by Canadian pipeline systems in the United States.

Liquefied Petroleum Gases

Naturally occurring gaseous hydrocarbons which liquefy only under conditions of increased pressure and/or decreased temperature. The main components are propane and butane. Liquefied refining gases are the equivalent of the above produced in refineries.

Net Deliveries

The unduplicated deliveries of all pipeline companies in Canada.

Net Receipts

The unduplicated receipts of all pipeline companies in Canada.

Petroleum Products

Products resulting from the processing of crude oil and related hydrocarbons in a refining operation, and include liquefied refinery gases.

Pipeline Fuel, Losses and Unaccounted For

Is a residual item which includes the fuel used by the pipeline pumping stations, oil lost due to pipeline handling, and other losses which cannot be accounted for due to errors in gauging etc.

Pipeline Systems

Are the various types of pipelines and ancillary facilities such as pumping stations, gathering and/or trunk lines, parallel lines, loops etc.

Receipts

The oil received by the pipeline company as gauged or metered and reported by the responding company. Receipts may be of several categories: receipts from fields which may be from batteries or wellheads; from processing plants (plants which process natural gas and recover liquid hydrocarbons); imports metered at the United States borders; receipts from refineries.

System Miles

The number of miles over which a pipeline system operates regardless of the number of pipelines in the system. For example, Interprovincial Pipe Line Company operates a pipeline system from Edmonton to Regina, a distance of 438 system miles but there are two pipelines in this system for an aggregate 876 pipeline miles.

Transfers

Are the movements of petroleum between two different pipeline companies.

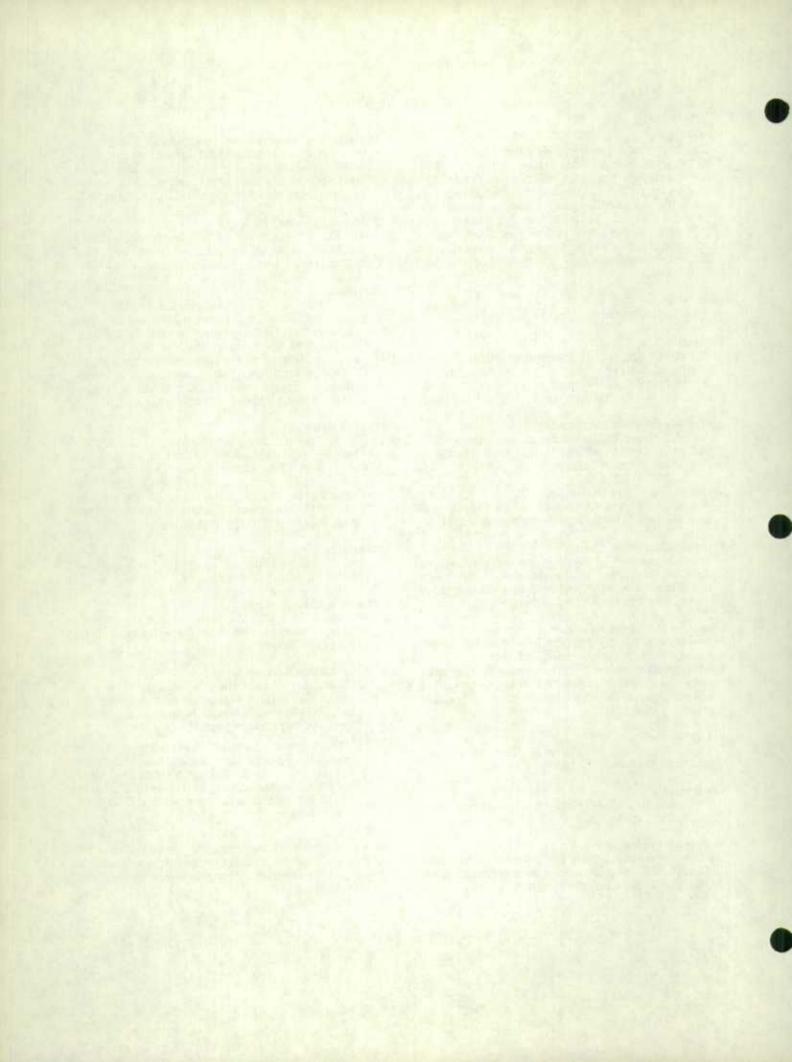

Transportation Burden

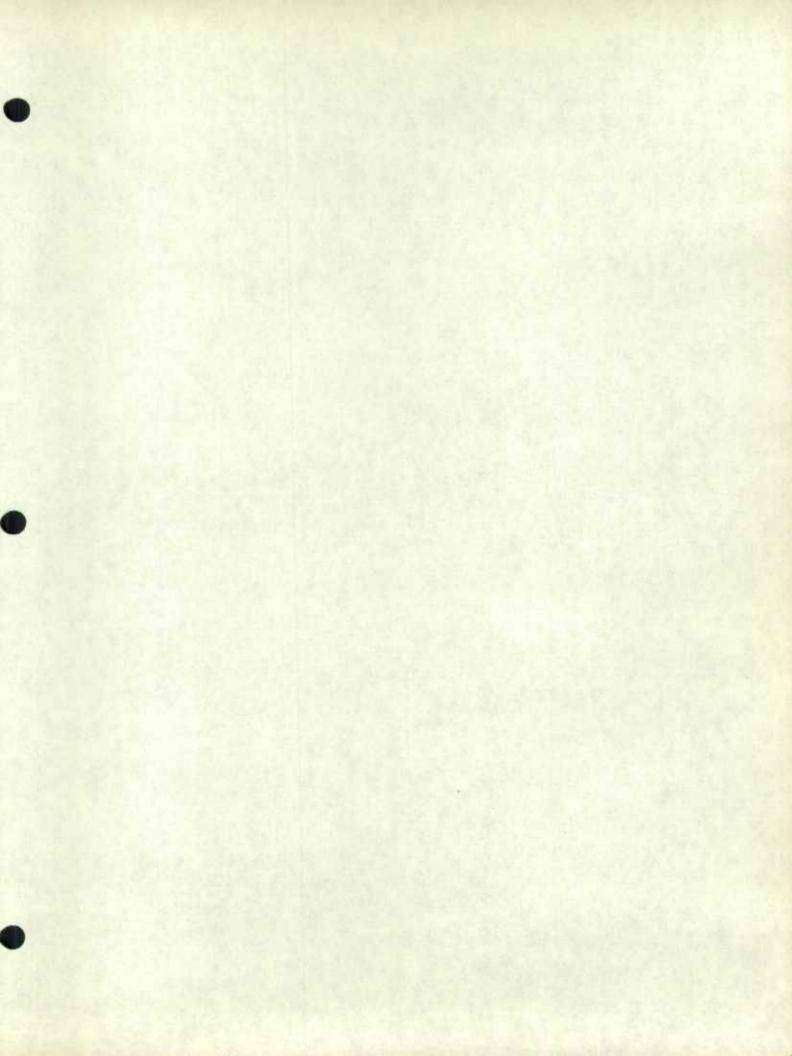

The total cost of transportation to move a commodity to market related to the ultimate selling price of the commodity.

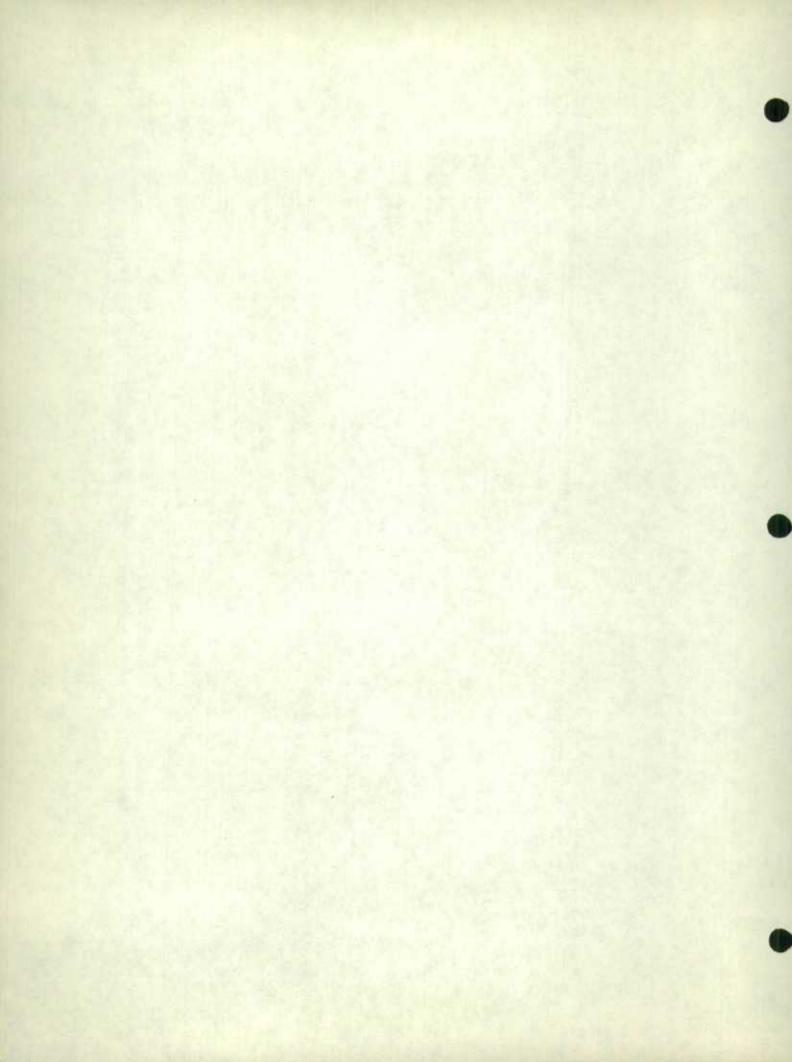

Transportation Sectors

- (a) Gathering lines: usually a small diameter pipe operating within oil fields and carrying the oil from the wellhead or battery to a common collection point, or points.
- (b) Trunk lines: pipelines generally of larger diameter running from the common collection point, or points, in fields, to refineries, other pipeline systems, or to termination points such as bulk plants, truck and rail loading facilities, etc.

Definitions of the financial accounts may be found in "Uniform Classification of Accounts for Oil Pipe Line Companies" published by the National Energy Board,
