# GAS PIPE LINE TRANSPORT

# 1959

### INTRODUCTION

The gas pipe line transport industry, as a significant factor in the economy, did not start until 1957 with the completion of the pipe line system of the Westcoast Transmission Company Limited from the Peace River area of Northeastern British Columbia to the Vancouver and Lower Mainland area, In 1958 the Trans-Canada Pipe Lines Limited completed construction of its system from Western Canada to Montreal.

Since late 1956 with the beginning of construction of the Westcoast Transmission system, over \$700 million has been invested in the industry. As a result western Canadian natural gas is available to most major cities from Montreal west servicing an area containing a total population of about 11 million people. Over four thousand miles of pipe line have been laid since 1956 and enormous projects to carry even larger amounts of Canadian gas are now in the planning or construction stages. In this first report of gas pipe line transport, detailed statistics are presented of this new and important industry and its contribution to the Canadian economy.

This report encompasses the results of the operation of gas pipe line companies engaged in the transmission of natural gas from natural gas fields or natural gas processing plants to local distribution systems during 1959.

The gas pipe line transport industry is defined as that industry which is engaged in the transportation of natural gas, by pipe line, from natural gas fields or processing plants to local distribution systems. Companies included in this industry obtain the bulk of their revenue from the sale of gas to distribution companies for resale. Those companies that derive most of their revenue from the sale of gas to final consumers are classified as being in the Gas Distribution Industry.

It should be noted that many gas distribution companies have extensive natural gas transmission operations, but because these operations are not separable from their primary activity, natural gas distribution, and since the transmission operations do not form a sufficiently large portion of their total activities, there is no justification for including them in the natural gas pipe line transport industry.

Sales of gas by distribution utilities are issued monthly in the report, "Sales of Manufactured and Natural Gas". An annual report of gas utilities engaged primarily in the distribution of gas will be issued shortly encompassing their operations.

The first report in the monthly gas pipe line transport series covered the period January-June, 1959 inclusive. Monthly reports have been issued subsequently. This first annual gas pipe line trans-

port report includes financial and property statistics as well as a review of the monthly operations. Unfortunately, however, previous years' data are not available for comparison.

The original monthly report covered the operation of 16 companies. However, four companies have since been deleted. They are: Ajax Alberta Pipeline Limited, Cold Lake Pipe Line Company Limited, Cretacious Pipelines Ltd., and North Canadian Oils Limited. However, Niagara Gas Transmission Limited which commenced operations late in 1959 has been included so that the industry is composed of 13 companies.

A transmission pipe line is defined as a pipe line constructed to carry natural gas at any stage between gas processing plants or field gate meter points and local distribution systems. Transmission pipe lines may receive gas directly from processing plants (residue gas) or field gate meter points (dry gas), or may receive gas from another transmission line or storage area. Also, transmission lines may deliver to other transmission lines or storage areas as well as directly to distribution systems.

The traffic of these transmission lines had been reported by volumes of gas handled by the companies. In order to provide as accurate a statistical series as possible, the concept of accounting for all the gas handled was decided upon. As a result natural gas receipts are made to equal natural gas disposition which is composed of sales, deliveries to other pipe line transport companies, inventory changes and fuel, plus a certain amount of gas which is lost or unaccounted for as a result of pipe line leakage, metering differences, etc.

Considering the gas pipe line transport industry in its entirety the inter-company movements of gas must be recorded, but if included in the total receipts, would result in duplication. Total net receipts are, therefore, given as the total unduplicated receipts of natural gas into the Canadian gas pipe line transport system. Total gross receipts include the inter-company movements of gas and gas movements from storage areas. Similar adjustments are made to arrive at total net deliveries.

Although gas is handled at various pressures in the pipe line systems, all volumes of gas have heen converted to a common base pressure. The pressure used is 14.73 pounds per square inch absolute at 60° F. and 1,000 B.t.u. (± 2 per cent) per cubic foot.

# Review of Survey Results

In 1959 the gas pipe line transport industry received into its 13 different systems some 222.6 billion cubic feet of natural gas and delivered 219.3

billion cubic feet mainly to distribution companies, or for export. The total gross receipts, i.e. the sum of the natural gas receipts received by individual companies, including gas transferred from one pipe line system to another, amounted to 318.1 billion cubic feet while gross deliveries were 313.8 billion cubic feet. Pipe line fuel used 1.0 per cent of the net gas receipts or 2.3 billion cubic feet. Line pack was increased by 0.4 billion cubic feet to a total of 4.8 billion, and gas lost or unaccounted for amounted to 1.6 billion cubic feet or 0.7 per cent. The gas storage systems operated by the industry received some 10.8 billion cubic feet and delivered 10.2 billion cubic feet, while net gas placed in storage amounted to 0.6 billion.

British Columbia, Alberta and Ontario accounted for all the net receipts of gas with Alberta making up 63% of the total or 141 billion cubic feet. Alberta, however, only accounted for 16% or 34.3 billion cubic feet of the net or final deliveries. Manitoba and Saskatchewan did not receive gas from fields or plants directly into their gas pipe line transport industry but, because of their position along the Trans-Canada Pipe Line System, received large volumes of gas from the adjacent provinces with relatively small amounts being finally delivered within the province.

The industry received 141 billion cubic feet of natural gas from Alberta, but only 14% was delivered within the province, 2.8% was delivered to Saskatchewan, 5.9% to Manitoba, 41.9% to Ontario, 4.7% to Quebec, 0.8% to British Columbia, and 27.6% was exported to the United States. British Columbia used only 28.0% of its gas supply and exported 70.3%.

The three systems of Trans-Canada Pipe Lines Limited, Westcoast Transmission Company Limited and The Alberta Gas Trunk Line Company Limited, accounted for 72% of the gas deliveries of the industry and 74% of the receipts.

The total traffic of the industry was estimated to be 166.4 billion Mcf. miles (or about 3,579 million ton-miles) of which 99.7% was accounted for by Trans-Canada Pipe Lines Limited, Westcoast Transmission Company Limited and Alberta Gas Trunk Line Company Limited. The revenue per MMcf. mile was 21.9¢ while operating costs and depreciation were estimated to be 14.4¢ per MMcf. mile.

The average length of haul was estimated at 760 miles and the average throughput per mile of pipe was approximately 110,000 Mcf. per day. Load factors for the year ranged from 34% to 78% for the various companies with 67.7% the industry average. The seasonal changes in the movements of natural gas were very marked with June receipts only 54% of the peak receipts of December.

Pipe line mileage operated by the industry amounted to 4,400 miles of which 4,100 miles were transmission mileage. In 1959, 260 miles of transmission lines were constructed and 1,100 miles in 1958. The transmission mileage has 74% of the pipe of 21 inch (outside diameter) pipe or larger, 16% consisted of 13 to 21 inch pipe and 10% was pipe under 13 inch diameter. There were 15 active compressor stations operated with a total installed capacity of 129,750 h.p.

At the end of 1959 the industry had \$734 million invested (after depreciation) of which 89% was in plant and equipment. Total (at cost) investment made by the industry in plant and equipment has amounted to \$668 million, 86% by inter-provincial companies and 14% by intra-provincial companies.

Total capital investment by the industry in 1959 in new facilities amounted to \$40 million while some \$2 million in facilities were retired. Most of the additions were in mains, \$22 million, and compressor stations \$11 million.

The \$668 million in plant and equipment was divided as follows, 61% or \$410 million in transmission pipe lines and 6% or \$43 million in transmission compressor stations and equipment. The four largest companies accounted for \$630 million or 94% of the total.

Total operating revenues of all companies amounted to \$75.7 million. The total revenue of the industry, however, is somewhat less than this due to the intra-industry movements of funds, and amounted to about \$66.7 million as shown in the following table.

Dupli- plicated
Total cations industry
(Table 10) (estimated) revenue

dollars

Net operating revenues were \$5.1 million for intra-provincial companies and \$14.6 million for inter-provincial companies, for a total net operating revenue of \$19.7 million for the industry. Heavy interest charges and minor other adjustments resulted in the industry suffering a deficit of \$6 million although the intra-provincial companies made a profit of \$2.6 million. The high interest charges are reflected in the balance sheet where 77% of the total assets were acquired by the use of long term debt; while the current ratio of the industry is only 1.1 to 1. Interest, as a per cent of total revenue, was the second largest expense item of the industry amounting to 33.5% and was exceeded only by the cost of gas sold which amounted to 34% of total revenues. Revenue, as a per cent of total assets amounted to 10.3%.

 $<sup>^{1}</sup>$  M = 000 MM = 000,000.
