TELEPHONE STATISTICS
FOR
1928

The number of telephones in Canada increased during 1928 by 74,547, or 6 per cent, and also the use of the telephone by subscribers increased 4 per cent according to the estimated number of conversations per telephone. The number of telephones installed was 1,334,534 which was an average of 13.82 per 100 population. The only country to exceed this density was the United States with an average of 15.8 in 1927 and the only other countries to approach it were New Zealand, Denmark, Sweden and Norway which ranged from 10 to 6.4 telephones per 100 population in 1927. Of the provinces, British Columbia showed the greatest density with an average of 20.6 telephones per 100 population, Ontario was second with an average of 18.3 and Saskatchewan was third with an average of 13.2, the other provinces being in the following order: Alberta 12.3, Manitoba 11.8, Quebec 10.4, New Brunswick 7.9, Nova Scotia 7.8 and Prince Edward Island 5.7.

An estimate of the number of telephone conversations during the year was 2,292,000,000 local and 36,177,000 long distance calls. These estimates were based on estimates made by systems operating over 77 per cent of all telephones in Canada and their estimates were based on actual counts made on days of normal business activity, and after adjusting for uncompleted calls, holidays, Sundays, etc., the average was multiplied by 365. The long distance calls in practically all cases were the actual long distance calls put through or completed. The average was 1,177 local and 27 long distance calls per telephone and 241 telephone conversations per capita as compared with an estimated average of 221 in 1927. The estimated average for the United States in 1927 was 225 and for New Zealand, 171.

The largest increase in the number of telephones was in Ontario where 30,875 were added during the year. Quebec came second with 20,322 and British Columbia third with 8,191. The total wire mileage was 3,982,867 miles which was an increase for the year of 391,832 miles, or 11 per cent, and the pole line mileage, including 4,546 miles of underground conduit, amounted to 207,566 miles, an increase of 3,321 miles, or 1.6 per cent. The miles of wire per telephone increased from 2.85 miles in 1927 to 2.99 miles and the miles of wire per mile of pole line increased from 17.6 miles in 1927 to 19.2 miles.

The total income of all systems amounted to \$61,791,333 as against \$56,907,338 in 1927 and expenditures were \$51,542,544 as against \$48,561,916 in 1927. The income for 1928 averaged \$46.30 per telephone, or approximately 2 1/2 cents per call including local and long distance calls. Many of the rural and cooperative systems are operated without profit which tends to lower these averages slightly, but for the systems reporting estimated local calls the average revenue (long distance revenue excluded) ranged from 1.3 cents to 2.9 cents with a weighted average of 2.14 cents per completed call. The higher averages were for systems serving large cities.

The statistics of the larger systems only are shown on pages 5 - 8 but the summary tables on pages 2 - 3 and 4 include all telephone systems in Canada. The incomes shown in the summary tables include all income and expenditures include taxes, interest, etc., but not dividends.

.....

Foreign statistics are from "Telephone and Telegraph Statistics of the World," January 1, 1928, by American Telephone and Telegraph Company.
