TELEPHONE STATISTICS

FOR

1930

CV
The number of telephones in use in Canada at December 31, 1930, was 1,402,861 which was an increase over the 1929 figure of 20,039. This is the smallest annual increase recorded since 1915. The eastern provinces showed increases but the three Prairie Provinces all showed decreases. In Saskatchewan the decrease was 6,501 telephones, or 6.4 per cent, in Alberta the decrease was 1,848 telephones, or 2.3 per cent, and in Manitoba, 1,022 telephones, or 1.3 per cent. Manitoba and Alberta had decreases the first year of the war, but this was the first decrease for Saskatchewan.

The average number of telephones per capita of .1411, however, was still greater than in any country except the United States, which in 1929 had an average of .164, and the total number of telephones was exceeded only by the United States with 20,068,023 in 1929, Germany with 3,182,305 and Great Britain and North Ireland with 1,886,726. The only other countries approaching Canada's density were New Zealand with .103 per capita and Denmark with .096 per capita.

The investment in all telephone systems amounted to \$319,101,191. This was an increase during the year of \$27,512,043 which was exceeded only by the increase in investments made during 1929.

The estimate of the number of completed calls or conversations during 1930 was 2,626,752,502 including 37,496,867 long distance calls. The long distance calls were actual counts and the local calls were estimates based on counts made periodically by systems operating almost 90 per cent of all telephones in Canada. These conversations averaged 250.5 per capita and 1,872 per telephone, which were higher than any other country. The United States with 231 conversations per capita and New Zealand with 212 were the only other countries with averages over 150 in 1929.

The wire mileage amounted to 4,880,224, an increase of 394,011 miles; the miles of wire per telephone averaged 3.4 miles against 2.3 in 1929 and the number of wires per pole increased from 20.34 to 21.97, (including wires in cables and conduits).

The total income amounted to \$69,420,459, including \$16,500,657 from long distance calls, and expenditures were \$61,886,340, including \$51,848,471 for operating expenses, \$2,257,636 for taxes and \$7,614,105 for interest and payments on debentures, loans, etc.

Practically all the co-operative systems which numbered 1,537 with 63,247 telephones are operated at cost for the benefit of members. The provincial and municipal systems with 239,480 telephones are also on a different basis from the stock companies and the financial data for the systems as a whole are affected accordingly.

Table 9 shows the number of telephones connected to each class of telephone system in each province and also the investment by each class of system. The statistics of the larger systems only are shown in table 13, but the statistics in tables 1 - 12 are for all telephone systems in Canada.

Statistics for foreign countries were taken from "Telephone and Telegraph Statistics of the World" by the American Telephone and Telegraph Company.
