Chief, Transportation and Public Utilities Branch, G.S. Wrong, B.Sc.

OUTPUT OF CENTRAL ELECTRIC STATIONS IN CANADA

JULY, 1934

The output of Canadian central electric stations during July amounted to 1,621,314,000 kilowatt hours, or a daily average of 52,300,000 kilowatt hours. This was a decrease from the June daily output of 4,654,000 kilowatt hours, or 8.2 per cent, and the index number dropped from 179.47 to 164.76, the lowest since January. This decrease was largely in exports, which decreased from 113,640,000 kilowatt hours in June to 105,848,000 kilowatt hours, and in deliveries to electric boilers which decreased from 418,850,000 kilowatt hours in June to 342,658,000 kilowatt hours. Deducting these two items from the total output leaves 1,172,807,000 kilowatt hours for July, or a daily average of 37,832,000 kilowatt hours as against 39,205,000 kilowatt hours in June, (July has been the lowest month of the year during 1924-34.) and the index number declined from 157.59 to 157.32. This, however, has been exceeded only by the May and June 1934 index numbers.

Output of Central Electric Stations in Canada
(Thousands of Kilowatt Hours)
