OUTPUT OF CENTRAL ELECTRIC STATIONS IN CANADA

APRIL, 1936

The monthly output of central electric stations in Canada reached a new high record of 2,163,717,000 kilowatt hours in April and the index number rose to 220.19, as against the previous high of 207.81 for March. All five divisions showed increases over April, 1935, and the Maritime Provinces and Quebec showed increases over March this year. These two divisions also showed increased consumptions over March; larger deliveries to electric boilers in Quebec more than accounted for this increase in that province.

Exports to the United States amounted to 125,497,000 kilowatt hours, or 29 per cent above last year's exports, and deliveries to electric boilers increased from 515,778,000 kilowatt hours in April, 1935, to 683,317,000 kilowatt hours, all divisions except British Columbia showing increases.

The consumption of firm power, or total production less exports and deliveries to electric boilers, was 1,354,904,000 kilowatt hours. Although this was below March and also October, 1935, consumption, the index number, adjusted for seasonal variations, reached a new high at 177.68; the March index at 173.77 was the previous peak.
