## QUTPUT OF CENTRAL ELECTRIC STATIONS IN CANADA

DECEMBER 21938

The output of central electric stations for December amounted to 2，349，844，000 kilowatt hours，a decrease from the December 1937 output of $108,152,000 \mathrm{kilowatt}$ hours．This decrease was all in secondary power for electric boilers which dropped from 669，451，000 kilowatt hours to 552，557，000 kilowatt hours．

Exports to the United States increased from 159，093，000 kilowatt hours a year ago to $161,290,000$ kilowatt hours．

Consumption of firm power increased from $1,629,452,000$ kilowatt hours in 1937 to $1,635,997,000$ kilowatt hours．This is the second highest for any month in the history of the industry，the high record of $1,655,879,000$ kilowatt hours being made in October， 1937.

The output of these large stations making monthly reports for the year was $25,994,238,000$ kilowatt hours which is approximately 99 per cent of the total output of all stations．This compares with $27,583,927,000$ kilowatt hours for 1937 ． Practically all of this decrease of $1,689,689,000 \mathrm{kilowatt}$ hours was secondary power for eleetric boilers which dropped from 7，313，014，000 kilowatt hours to $5,787,537,000$ kilowatt hours，or by $1,525,477,000$ kilowatt hours or 26 per cent．

Exports to the United States dropped from－1，847，100，000 kilowatt hours in 1937 to $1,826,514,000$ kilowatt hours．The off peak exports included in these were $451,600,000$ kilowatt hours in 1937 and $453,233,000$ kilowatt hours in 1938.

The total output less exports and deliveries of secondary power to electric boilers amounted to $18,380,187,000$ kilowatt hours compared with $18,423,813,000$ kilowatt hours in 1937，a decrease of $43,626,000$ kllowatt hours，or less than a quarter of one per cent．
