ELECTRIC POWER STATISTICS

OCTOBER 1966

Table 1 of this report contains preliminary statistics on energy generation, imports, exports and secondary for the month of October 1966. These preliminary statistics indicate that net generation increased 8.4 per cent to 13,619,312 thousand kwh. in October 1966 from 12,568,525^r thousand kwh. generated one year ago.

Imports increased to 286,752 thousand kwh. from 280,000 thousand kwh. and exports increased to 420,015 thousand kwh. from 309,610 thousand kwh. in October 1965.

Table 2 shows detailed data concerning the amount of energy made available and the disposition of this energy for the month of August 1966. These figures include a breakdown of sales by rate categories for large utilities and industries while distribution by smaller utilities and industries is included in "distribution by non-respondents" (item 31). Distribution by non-respondents is the energy which is delivered by companies which report in this survey to companies which do not report. Consumption of own generation by industrial establishments is included in "used in own plant" (items 20 and 21). Comparable August 1965 data is shown for all categories where available.

Tables 5, 6 and 7 give final data for months January to August 1966 and preliminary data for other months. In Table 5 secondary energy includes both that used in own plant and that sold to ultimate customers. In August of the 423,545^r thousand kwh. of secondary energy 181,717 thousand kwh. was used in own plant, while 241,828 thousand kwh. was sold to ultimate customers.

Total generation for the twelve-month period ending October 31, 1966 amounted to 154,972,173 thousand kwh. compared to 153,921,386^r for the period ending in September.

Monthly electric power statistics are designed to provide current information on the production and consumption of electric energy in Canada. In order to expedite the collection and compilation of returns, the series is confined to firms which generate a minimum of 10 million kwh. per annum and to large distributors of electric energy. These firms accounted for 99.5 per cent of total production in 1964.

In the electric power series, net generation is defined as total generation less the amount used in station service.
