ELECTRIC POWER STATISTICS

JUNE 1966

Table 1 of this report contains preliminary statistics on energy generation, imports, exports and secondary for the month of June 1966. These preliminary statistics indicate that net generation increased 13.8 per cent to 12,254,416 thousand kwh. in June 1966 from 10,770,808 thousand kwh. generated one year ago.

Imports decreased to 223,435 thousand kwh. from 405,609 thousand kwh. and exports increased to 349,640 thousand kwh. from 278,918 thousand kwh. in June 1965.

Table 2 shows detailed data concerning the amount of energy made available and the disposition of this energy for the month of April 1966. These figures include a breakdown of sales by rate categories for large utilities and industries while distribution by smaller utilities and industries is included in "distribution by non-respondents" (item 31). Distribution by non-respondents is the energy which is delivered by companies which report in this survey to companies which do not report. Consumption of own generation by industrial establishments is included in "used in own plant" (items 20 and 21). Comparable April 1965 data is shown for all categories where available.

Tables 5, 6 and 7 give final data for the months January to April 1966 and preliminary data for other months. In Table 5 secondary energy includes both that used in own plant and that sold to ultimate customers. In April of the 283,278 thousand kwh. of secondary energy 141,384 thousand kwh. was used in own plant, while 141,894 thousand kwh. was sold to ultimate customers.

Total generation for the twelve-months period ending June 30, 1966 amounted to 150,910,608 thousand kwh. compared to 149,427,000<sup>r</sup> thousand kwh. for the period ending in May.

Monthly electric power statistics are designed to provide current information on the production and consumption of electric energy in Canada. In order to expedite the collection and compilation of returns, the series is confined to firms which generate a minimum of 10 million kwh. per annum and to large distributors of electric energy. These firms accounted for 99.5 per cent of total production in 1964.

In the electric power series, net generation is defined as total generation less the amount used in station service.
