ELECTRIC POWER STATISTICS

OCTOBER 1967

Table 1 of this report contains preliminary statistics on energy generation, imports, exports and secondary for the month of October 1967. These preliminary statistics indicate that net generation increased 2.6 per cent to 13,956,837 thousand kwh. in October 1967 from 13,595,422^r thousand kwh. generated one year ago.

Imports increased to 348,934 thousand kwh. from 286,752 thousand kwh. and exports decreased to 366,436 thousand kwh. from 420,015 thousand kwh. in October 1966.

Table 2 shows detailed data concerning the amount of energy made available and the disposition of this energy for the month of August 1967. These figures include a breakdown of sales by rate categories for large utilities and industries while distribution by smaller utilities and industries is included in "distribution by non-respondents" (item 31). Distribution by non-respondents is the energy which is delivered by companies which report in this survey to companies which do not report. Consumption of own generation by industrial establishments is included in "used in own plant" (item 20 and 21).

Tables 5, 6 and 7 give final data for the months January to August 1967 and preliminary data for other months. In Table 5 secondary energy includes both that used in own plant and that sold to ultimate customers. In August of the 92,624^r thousand kwh. of secondary energy 35,077 thousand kwh. was used in own plant, while 57,547 thousand kwh. was sold to ultimate customers.

Total generation for the twelve month period ending October 31, 1967 amounted to 163,793,169 thousand kwh. compared to 163,431,754^r thousand kwh. for the period ending in September.

Monthly electric power statistics are designed to provide current information on the production and consumption of electric energy in Canada. In order to expedite the collection and compilation of returns, the series is confined to firms which generate a minimum of 10 million kwh. per annum and to large distributors of electric energy. These firms accounted for 99.5 per cent of total production in 1966.

In the electric power series, net generation is defined as total generation less the amount used in station service.

(1) Many utilities cannot distinguish between domestic and farm, as they do not keep separate records. Sales to farm customers in Manitoba, Saskatchewan and Alberta only are included. (2) Includes sales to industrial establishments with generating facilities. [†] Revised figures.
